---

Kathie,

We are in the process of reviewing the Phase 1 Haz Mat report for the above referenced project and the designer asked a question about the recommended action for the Phase 2. Included in the recommendations is using Ground Penetrating Radar to gather information about one site. The consultant, OMNNI, indicated that they have worked with you in the past to have WisDOT (or possibly another consultant under a master contract) complete this work. They then sent the info to OMNNI for their use in the Phase 2 document.

Is this something that we should work with you to get done, or should we see if OMNNI can get a sub consultant to do it on their own?

Thanks,

**Rich Glen, P.E.**
