Rich,

Please see Tom's comment below. In discussing with Tom, this relates to line 20 and 21. If I recall correctly it should be a weighted average for the two areas of the project.

Also, please have your staff review the remainder of the report. Let me know what the effort will be to review and based on that we will either amend the contract to add their names or do the work under the admin contract.

Once it is reviewed and the cover page is updated per Tom's comments, forward back to Tom for signature. Please copy me as well.

Brian,

I have reviewed the storm water page of this report. I would have the consultant provide more explanation of what the project requirement is. They have the 40% requirement for the rural to urban conversion but that is I think a small part of the project. Have them specify what the "project" requirement is so that it is clear that the project meets its requirement.

Tom

Brian,

I looked through this drainage report, but it isn't something that I'm very familiar with. Should we run this by Tom Kobus (since he is the regional storm water engineer) for his review and comment? Otherwise we have some staff that is more up to date on this, but they aren't currently part of the LP contract.

Thanks,

**Rich Glen, P.E.**

Rich,
Attached is the 30% drainage report. We plan to meet the 40% TSS reduction with the use of catch basins along the project. No pond is needed. Please review and let us know if WisDOT has any issues or concerns.
Peg
