Kathie,
the project PS&E is May 1, 2018 so the sooner the better. However, if I don't have it until April, I can submit for the Local Program and Region review with that part of the specials highlighted.

The reports were submitted to DNR in August, 2017. See attached email.
Peg

Peg-

Thanks for sending the reports. We typically like to have approval to use the sanitary earlier, because it often takes some time to get a response from the sanitary district and it also gives us sufficient time to develop alternate options if they do not allow the use of their system. I believe I had an opportunity to review these reports last fall, but I'd like to take a look at them again. I'm in this afternoon and Wednesday morning, but then out through the end of March. Is a response the first week or two of April sufficient?

I had asked that these reports be sent to DNR, but I just looked and I don't yet see them in BRRTS. Can you confirm they were sent? If so, I'll touch base with DNR. We've had some turn over in staff in our R&R LTE, so it's entirely possible that they haven't yet been reviewed.

Thanks,

Kathie

Kathie,
The Phase 2 reports can be downloaded from the following location.

https://omnniassociates.sharefile.com/d-sbb45d8c961f4ecd8

Please let me know if you have any questions. It was my understanding that the environmental engineer for construction usually took care of the permit. Let me know if that is not the case and if I need to coordinate with the sanitary.
Peg

Would the selected environmental consultant be able to provide this information in a timely manner during construction to allow discharge into the sanitary sewer system?

> This is helpful with the special but does not address the requirements of the Sanitary district to be able to discharge the contaminated water into the sanitary sewer system.

16. Excavation, Hauling, and Disposal of Petroleum Contaminated Soils – C – Construction
- Midwest Contract Operations (MCO) is in charge of the Village sanitary and water system from a licensed operator stand point. They need to know the following information:
- *We (MCO) will need to see the following analytical testing completed before we give approval to discharge the remediation water to the wastewater plant.*
  - *Diesel Range Organics*
  - *Gasoline Range Organics*
  - *VOCs*
  - *SVOCs*
  - *Heavy Metals*

*MCO will also need to know the volume to be discharged.* Without knowing this information, MCO, and the Village of St. Cloud, will not allow any discharge of contaminated water into the sanitary sewer system.

Kathy's comments are within the attached.

Basically, she will select a consultant once the project is

let, so just include her information in the contact section.

Brian-
Quick review, but I have a couple comments (see attached). Let me know if you have questions.
Thanks,
Kathie

Kathy,

Attached is the specials for the CTH G project in Fond du lac county. This project will require an environmental consultant to monitor remediation activities during construction. Please review the articles pertaining to the HazMat and provide any contact information necessary.

Thanks,
