Yeah, I emailed the PM again this morning and he called the construction project leader again and was told that Haas had discussed this location with ATT during construction. Will probably need to dig into field notes to see if anything was documented. -Heath

Appreciate that. The Prime-Craig Hass called me shortly after I sent you the email and his response was somewhat interesting.

Rick

Hi Rick. I am on vacation, from this past Thursday until tomorrow. I forwarded the issue to the PM, who should be gathering some information from the contractor and field staff. I hope to have a response tomorrow. Thanks. -Heath

Heath,
Here is what we found today when we exposed our ped/splice in order to help determine the limits of our solution. At this point, I'm waiting to hear from my splicers on Monday about their take on a possible solution.

Heath,

I performed a drive-by on the above titled project and I noticed a very LARGE concern with both Charter's and AT&T's half buried pedestal now sitting within 3ft of the newly paved path Please see the attached photos.

A couple quick questions surrounding this observation:
1. Why was no contact made to Shane or myself that these peds needed to be adjusted prior to the final grade work?
2. Who should we coordinate with in order to help us get our peds set to new grade?
   Note that due to the proximity of ped and new pavement, it looks like we may have to disturb the newly paved path.

Looking forward to hearing more on this situation.

Sincerely,

Rick Podolak
