Attached are the TRANS 220 DT1077 submittals for your facilities related to the subject project. These include the DT1077 Form and Cover Letter, the project Concept Definition Report (CDR), project map and a list of potentially affected utilities in the project area.

Please complete and return your response within 7 days and your system maps within 60 days. **If you do not have facilities** it is still very important to reply to minimize future documents being sent to you when they are not necessary. Please do not try and make a determination as to whether or not your facilities will be impacted by the project. That is not the intent of this notice. "No Facilities" is only appropriate if the utility company truly has no facilities within the project limits, or reasonably nearby.

Thank you in advance for your cooperation and assistance in our project development efforts.
