PROPOSAL REQUIREMENTS AND CONDITIONS

The bidder, signing and submitting this proposal, agrees and declares as a condition thereof, to be bound by the following conditions and requirements.

If the bidder has a corporate relationship with the proposal design engineering company, the bidder declares that it did not obtain any facts, data, or other information related to this proposal from the design engineering company that was not available to all bidders.

The bidder declares that they have carefully examined the site of, and the proposal, plans, specifications and contract forms for the work contemplated, and it is assumed that the bidder has investigated and is satisfied as to the conditions to be encountered, as to the character, quality, and quantities of work to be performed and materials to be furnished, and as to the requirements of the specifications, special provisions and contract. It is mutually agreed that submission of a proposal shall be considered conclusive evidence that the bidder has made such examination.

The bidder submits herewith a proposal guaranty in proper form and amount payable to the party as designated in the advertisement inviting proposals, to be retained by and become the property of the owner of the work in the event the undersigned shall fail to execute the contract and contract bond and return the same to the office of the engineer within fourteen (14) days after having been notified in writing to do so; otherwise to be returned.

The bidder declares that they understand that the estimate of quantities in the attached schedule is approximate only and that the attached quantities may be greater or less in accordance with the specifications.

The bidder agrees to perform the said work, for and in consideration of the payment of the amount becoming due on account of work performed, according to the unit prices bid in the following schedule, and to accept such amounts in full payment of said work.

The bidder declares that all of the said work will be performed at their own proper cost and expense, that they will furnish all necessary materials, labor, tools, machinery, apparatus, and other means of construction in the manner provided in the applicable specifications and the approved plans for the work together with all standard and special designs that may be designed on such plans, and the special provisions in the contract of which this proposal will become a part, if and when accepted. The bidder further agrees that the applicable specifications and all plans and working drawings are made a part hereof, as fully and completely as if attached hereto.

The bidder, if awarded the contract, agrees to begin the work not later than ten (10) days after the date of written notification from the engineer to do so, unless otherwise stipulated in the special provisions.

The bidder declares that if they are awarded the contract, they will execute the contract agreement and begin and complete the work within the time named herein, and they will file a good and sufficient surety bond for the amount of the contract for performance and also for the full amount of the contract for payment.

The bidder, if awarded the contract, shall pay all claims as required by Section 779.14, Statutes of Wisconsin, and shall be subject to and discharge all liabilities for injuries pursuant to Chapter 102 of the Statutes of Wisconsin, and all acts amendatory thereto. They shall further be responsible for any damages to property or injury to persons occurring through their own negligence or that of their employees or agents, incident to the performance of work under this contract, pursuant to the Standard Specifications for Road and Bridge Construction applicable to this contract.

In connection with the performance of work under this contract, the contractor agrees to comply with all applicable state and federal statutes relating to non-discrimination in employment. No otherwise qualified person shall be excluded from employment or otherwise be subject to discrimination in employment in any manner on the basis of age, race, religion, color, gender, national origin or ancestry, disability, arrest or conviction record (in keeping with s.111.32), sexual orientation, marital status, membership in the military reserve, honesty testing, genetic testing, and outside use of lawful products. This provision shall include, but not be limited to the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation, and selection for training, including apprenticeship. The contractor further agrees to ensure equal opportunity in employment to all applicants and employees and to take affirmative action to attain a representative workforce.

The contractor agrees to post notices and posters setting forth the provisions of the nondiscrimination clause, in a conspicuous and easily accessible place, available for employees and applicants for employment.

If a state public official (section 19.42, Stats.) or an organization in which a state public official holds at least a 10% interest is a party to this agreement, this contract is voidable by the state unless appropriate disclosure is made to the State of Wisconsin Ethics Board.

BID PREPARATION

Preparing the Proposal Schedule of Items

A General

- (1) Obtain bidding proposals as specified in **section 102** of the standard specifications prior to 11:45 AM of the last business day preceding the letting. Submit bidding proposals using one of the following methods:
 1. Electronic bid on the internet.
 2. Electronic bid on a printout with accompanying diskette or CD ROM.
 3. Paper bid under a waiver of the electronic submittal requirements.
- (2) Bids submitted on a printout with accompanying diskette or CD ROM or paper bids submitted under a waiver of the electronic submittal requirements govern over bids submitted on the internet.
- (3) The department will provide bidding information through the department's web site at <http://www.dot.wisconsin.gov/business/engrserv/bid-letting-information.htm>. The contractor is responsible for reviewing this web site for general notices as well as information regarding proposals in each letting. The department will also post special notices of all addenda to each proposal through this web site no later than 4:00 P.M. local time on the Thursday before the letting. Check the department's web site after 5:00 P.M. local time on the Thursday before the letting to ensure all addenda have been accounted for before preparing the bid. When bidding using methods 1 and 2 above, check the Bid Express™ on-line bidding exchange at <http://www.bidx.com/> after 5:00 P.M. local time on the Thursday before the letting to ensure that the latest schedule of items Expedite file (*.ebs or *.00x) is used to submit the final bid.
- (4) Interested parties can subscribe to the Bid Express™ on-line bidding exchange by following the instructions provided at the www.bidx.com web site or by contacting:

Info Tech Inc.
5700 SW 34th Street, Suite 1235
Gainesville, FL 32608-5371
email: <mailto:customer.support@bidx.com>

- (5) The department will address equipment and process failures, if the bidder can demonstrate that those failures were beyond their control.
- (6) Contractors are responsible for checking on the issuance of addenda and for obtaining the addenda. Notice of issuance of addenda is posted on the department's web site at <http://www.dot.wisconsin.gov/business/engrserv/bid-letting-information.htm> or by calling the department at (608) 266-1631. Addenda can ONLY be obtained from the departments web site listed above or by picking up the addenda at the Bureau of Highway Construction, Room 601, 4802 Sheboygan Avenue, Madison, WI, during regular business hours.

B Submitting Electronic Bids

B.1 On the Internet

- (1) Do the following before submitting the bid:
 1. Have a properly executed annual bid bond on file with the department.
 2. Have a digital ID on file with and enabled by Info Tech Inc. Using this digital ID will constitute the bidder's signature for proper execution of the bidding proposal.
- (2) In lieu of preparing, delivering, and submitting the proposal as specified in **102.6** and **102.9** of the standard specifications, submit the proposal on the internet as follows:

1. Download the latest schedule of items reflecting all addenda from the Bid Express™ web site.
 2. Use Expedite™ software to enter a unit price for every item in the schedule of items.
 3. Submit the bid according to the requirements of Expedite™ software and the Bid Express™ web site. Do not submit a bid on a printout with accompanying diskette or CD ROM or a paper bid. If the bidder does submit a bid on a printout with accompanying diskette or a paper bid in addition to the internet submittal, the department will disregard the internet bid.
 4. Submit the bid before the hour and date the Notice to Contractors designates.
 5. Do not sign, notarize, and return the bidding proposal described in 102.2 of the standard specifications.
- (3) The department will not consider the bid accepted until the hour and date the Notice to Contractors designates.

B.2 On a Printout with Accompanying Diskette or CD ROM

- (1) Download the latest schedule of items from the Wisconsin pages of the Bid Express™ web site reflecting the latest addenda posted on the department's web site at <http://www.dot.wisconsin.gov/business/engrserv/bid-letting-information.htm>. Use Expedite™ software to prepare and print the schedule of items. Provide a valid amount for all price fields. Follow instructions and review the help screens provided on the Bid Express™ web site to assure that the schedule of items is prepared properly.
- (2) Staple an 8 1/2 by 11 inch printout of the Expedite™ generated schedule of items to the other proposal documents submitted to the department as a part of the bidder's sealed bid. As a separate submittal not in the sealed bid envelop but due at the same time and place as the sealed bid, also provide the Expedite™ generated schedule of items on a 3 1/2 inch computer diskette or CD ROM. Label each diskette or CD ROM with the bidder's name, the 4 character department-assigned bidder identification code from the top of the bidding proposal, and a list of the proposal numbers included on that diskette or CD ROM as indicated in the following example:

Bidder Name

BN00

Proposals: 1, 12, 14, & 22

- (3) If bidding on more than one proposal in the letting, the bidder may include all proposals for that letting on one diskette or CD ROM. Include only submitted proposals with no incomplete or other files on the diskette or CD ROM.
- (4) The bidder-submitted printout of the Expedite™ generated schedule of items is the governing contract document and must conform to the requirements of section 102 of the standard specifications. If a printout needs to be altered, cross out the printed information with ink or typewriter and enter the new information and initial it in ink. If there is a discrepancy between the printout and the diskette or CD ROM, the department will analyze the bid using the printout information.
- (5) In addition to the reasons specified in section 102 of the standard specifications, proposals are irregular and the department may reject them for one or more of the following:
 1. The check code printed on the bottom of the printout of the Expedite™ generated schedule of items is not the same on each page.
 2. The check code printed on the printout of the Expedite™ generated schedule of items is not the same as the check code for that proposal provided on the diskette or CD ROM.

3. The diskette or CD ROM is not submitted at the time and place the department designates.

C Waiver of Electronic Submittal

- (1) The bidder may request a waiver of the electronic submittal requirements. Submit a written request for a waiver in lieu of bids submitted on the internet or on a printout with accompanying diskette or CD ROM. Use the waiver that was included with the paper bid document sent to the bidder or type up a waiver on the bidder's letterhead. The department will waive the electronic submittal requirements for a bidding entity (individual, partnership, joint venture, corporation, or limited liability company) for up to 4 individual proposals in a calendar year. The department may allow additional waivers for equipment malfunctions.
- (2) Submit a schedule of items on paper conforming to [section 102](#) of the standard specifications. The department charges the bidder a \$75 administrative fee per proposal, payable at the time and place the department designates for receiving bids, to cover the costs of data entry. The department will accept a check or money order payable to: "Wisconsin, Dept. of Transportation."
- (3) In addition to the reasons specified in [section 102](#) of the standard specifications, proposals are irregular and the department may reject them for one or more of the following:
 1. The bidder fails to provide the written request for waiver of the electronic submittal requirements.
 2. The bidder fails to pay the \$75 administrative fee before the time the department designates for the opening of bids unless the bidder requests on the waiver that they be billed for the \$75.
 3. The bidder exceeds 4 waivers of electronic submittal requirements within a calendar year.
- (4) In addition to the reasons specified in [section 102](#) of the standard specifications, the department may refuse to issue bidding proposals for future contracts to a bidding entity that owes the department administrative fees for a waiver of electronic submittal requirements.

PROPOSAL BID BOND

DT1303 1/2006

Wisconsin Department of Transportation

Proposal Number	Project Number	Letting Date
Name of Principal		
Name of Surety	State in Which Surety is Organized	

We, the above-named Principal and the above-named Surety, are held and firmly bound unto the State of Wisconsin in the sum equal to the Proposal Guaranty for the total bid submitted for the payment to be made; we jointly and severally bind ourselves, our heirs, executors, administrators, successors and assigns. The condition of this obligation is that the Principal has submitted a bid proposal to the State of Wisconsin acting through the Department of Transportation for the improvement designated by the Proposal Number and Letting Date indicated above.

If the Principal is awarded the contract and, within the time and manner required by law after the prescribed forms are presented for signature, enters into a written contract in accordance with the bid, and files the bond with the Department of Transportation to guarantee faithful performance and payment for labor and materials, as required by law, or if the Department of Transportation shall reject all bids for the work described, then this obligation shall be null and void; otherwise, it shall be and remain in full force and effect. In the event of failure of the Principal to enter into the contract or give the specified bond, the Principal shall pay to the Department of Transportation **within 10 business days of demand** a total equal to the Proposal Guaranty as liquidated damages; the liability of the Surety continues for the full amount of the obligation as stated until the obligation is paid in full.

The Surety, for value received, agrees that the obligations of it and its bond shall not be impaired or affected by any extension of time within which the Department of Transportation may accept the bid; and the Surety does waive notice of any such extension.

IN WITNESS, the Principal and Surety have agreed and have signed by their proper officers and have caused their corporate seals to be affixed this date: **(DATE MUST BE ENTERED)**

LIST OF SUBCONTRACTORS

Section 66.29(7), Wisconsin Statutes, provides that a bidder, as a part of his proposal, shall submit a list of the subcontractors he proposes to contract with and the class of work to be performed by each, provided that to qualify for such listing each subcontractor must first submit his bid in writing to the general contractor at least 48 hours prior to the time of bid closing. It further provides that a proposal of a bidder shall not be invalid if any subcontractor, and the class of work to be performed by such subcontractor, has been omitted from a proposal.

No subcontract, whether listed herein or later proposed, may be entered into without the written consent of the Engineer as provided in Subsection 108.1 of the Standard Specifications.

DECEMBER 2000

**CERTIFICATION REGARDING DEBARMENT, SUSPENSION, AND OTHER
RESPONSIBILITY MATTERS - PRIMARY COVERED TRANSACTIONS**

Instructions for Certification

1. By signing and submitting this proposal, the prospective contractor is providing the certification set out below.
2. The inability of a person to provide the certification required below will not necessarily result in denial of participation in this covered transaction. The prospective contractor shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective contractor to furnish a certification or an explanation shall disqualify such person from participation in this transaction.
3. The certification in this clause is a material representation of fact upon which reliance was placed when the department determined to enter into this transaction. If it is later determined that the contractor knowingly rendered an erroneous certification in addition to other remedies available to the Federal Government the department may terminate this transaction for cause or default.
4. The prospective contractor shall provide immediate written notice to the department to whom this proposal is submitted if at any time the prospective contractor learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
5. The terms "covered transaction," "debarred," "suspended," "ineligible," "lower tier covered transaction," "participant," "person," "primary covered transaction," "principal," "proposal," and "voluntarily excluded," as used in this clause, have the meanings set out in the Definitions and Coverage sections of the rules implementing Executive Order 12549. You may contact the department to which this proposal is being submitted for assistance in obtaining a copy of those regulations.
6. The prospective contractor agrees by submitting this proposal that, should this contract be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department entering into this transaction.
7. The prospective contractor further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transaction," which is included as an addendum to PR-1273 - "Required Contract Provisions Federal Aid Construction Contracts," without

modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions.

8. The contractor may rely upon a certification of a prospective subcontractor/materials supplier that it is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A contractor may decide the method and frequency by which it determines the eligibility of its principals. Each contractor may, but is not required to, check the Disapproval List (telephone # 608/266/1631).
9. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a contractor is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
10. Except for transactions authorized under paragraph 6 of these instructions, if a contractor in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department may terminate this transaction for cause or default.

Certification Regarding Debarment, Suspension, and Other Responsibility Matters - Primary Covered Transactions

- (1) The prospective contractor certifies to the best of its knowledge and belief, that it and its principals:
 - (a) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;
 - (b) Have not within a three-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements or receiving stolen property;
 - (c) Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offense enumerated in paragraph (1)(b) of this certification; and
 - (d) Have not within a three-year period preceding this proposal had one or more public transactions (Federal, State or local) terminated for cause or default.
- (2) Where the prospective contractor is unable to certify to any of the statements in this certification, such prospective contractor shall attach an explanation to this proposal.

SPECIAL PROVISIONS

1. General.

Perform the work under this construction contract for Project 1016-05-77, Mauston - Wisconsin Dells, Safety Rest Areas 9 and 10, Roof Replacements, Non-Highway, Juneau County, Wisconsin as the plans show and execute the work as specified in the State of Wisconsin, Department of Transportation, Standard Specifications for Highway and Structure Construction, 2013 Edition, as published by the department, and these special provisions.

If all or a portion of the plans and special provisions are developed in the SI metric system and the schedule of prices is developed in the US standard measure system, the department will pay for the work as bid in the US standard system.

100-005 (20120615)

2. Scope of Work.

The work under this contract shall consist of removing the old shingle roofing systems and replacing them with new asphalt shingle roofing systems at the main buildings at Rest Areas 9 and 10, and the construction of two new picnic shelters at each site, and associated sidewalks concrete pads and picnic tables leading to the picnic shelters. Work also includes painting, light fixture replacement and construction of a family assisted rest room inside the existing building, and all incidental items necessary to complete the work as shown on the plans and included in the proposal and contract.

104-005 (20090901)

3. Prequalification of Bidders.

Prequalification is not required. Standard spec 102.1 does not apply.

4. Prosecution and Progress.

Begin work within ten calendar days after the engineer issues a written notice to do so.

Rest Areas 9 and 10 shall remain open to public access during the summer travel season, and may not close until Wednesday, September 4, 2013. The rest areas shall be closed to public access during all work.

5. Coordination With Other Contracts

This special provision describes coordination with other contractors who will be working in the project area during the contract period.

Facility Upgrades – ID 1016-05-77 (This Contract)

Work under this contract consists of removing the old shingle roofing systems and replacing them with new roofing systems at the main buildings at Rest Areas 9 and 10. Work also includes the construction of two new picnic shelters at each site, and associated sidewalks concrete pads and picnic tables. Work also includes painting, light fixture replacement and construction of a family assisted rest room inside the existing building. Coordinate the work operations, materials storage and worker access to the site to allow unrestricted site access to all contractors working at the site.

Pavement Repairs – ID 1016-05-78

Work under this contract consists of asphaltic milling and pavement, concrete pavement patching, sidewalk repairs pavement marking and ITS equipment installation. Coordinate the work operations, materials storage and worker access to the site to allow unrestricted site access to all contractors working at the site.

6. Traffic.

The project is not anticipated to significantly impact traffic on IH 90/94. Coordinate dumpster placement with the roadway contractor to avoid conflicts with the pavement and sidewalk repair work.

7. Utilities.

This contract does not come under the provision of Administrative Rule Trans 220. 107-065 (20080501)

The project is not anticipated to impact utilities. Use caution to ensure the integrity of any overhead and underground utility.

8. Picnic Tables Single Pedestal, Item 999.1800.S**A Description**

This special provision describes furnishing and installing picnic tables according to the plans and as hereinafter provided.

B Materials**B.1 Recycled Plastic Planks**

Provide planks that meet the following requirements:

- A. Planks shall be made from 95% post-consumer or post-industrial recycled type 2 HDPE plastic.
- B. Plastic shall be impregnated with finish color and protected with a UV inhibitor to prevent fade.
- C. Color shall be dark brown or a shade of dark red brown color, and shall be uniform for all planks within a table unit.
- D. Plastic shall be able to sustain normal loadings at temperatures ranging from -26 degrees to 100 degrees Fahrenheit without cracking or excessive warping.

Plastic shall be subject to the approval from the engineer.

B.2 Structural Steel Frame

All steel tubes shall be ASTM A500 Grade B, cold-formed electric resistance welded tubing; all other steel shall be minimum ASTM A36M.

B.3 Hardware

Provide bolts that are galvanized steel carriage-type bolts of the sizes specified on the plan.

B.4 Paint

Use one of the following paint systems: Rust-Oleum 9300 System Heavy-Duty Epoxy finish with a 9334 Zinc Rich primer; Sherwin Williams Hi-Solids Catalyzed Epoxy finish with a Zinc Rich primer; or Devoe Tru-Glaze-3 Epoxy Gloss Coating with a Zinc Rich primer.

C Construction

C.1 Steel Fabrication

All welding of structural steel shall conform to the requirements of these specifications and to AASHTO/AWS D 1.2, under structural steel and angle iron of the Bridge Welding Code.

C.2 Painting

Prior to painting, clean by sandblasting all metal including miscellaneous structural steel to a SSPC-10, commercial blast finish.

Paint all metal with an epoxy paint over a zinc rich primer. Use primer and finish coat paint that is from the same manufacturer and primer recommended for use with finish coat.

Shop-apply the primer and the first coat. Field-apply the second finish coat after erection of the picnic table.

Perform all painting in strict compliance to the paint manufacturer's instructions for surface preparation and application requirements.

D Measurement

The department will measure Picnic Tables Single Pedestal as each individual picnic table unit, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
999.1800.S	Picnic Tables Single Pedestal	Each

Payment is full compensation for constructing, furnishing, hauling, installing tables; and painting.
999-015 (20030820)

9. **Rest Area Picnic Shelters, Item SPV.0060.01.**

A Description

This special provision describes the work for constructing new picnic shelters at each site for Rest Areas 9 and 10, and all incidental items necessary to complete the work in accordance to the plans and General Requirements for Building Construction and Technical Specifications.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
061000	Rough Carpentry
076200	Flashing and Sheet Metal
079200	Joint Sealants
099100	Painting

C Construction

Match the asphalt shingle roofing system, materials and color used on the picnic shelters to that used on the main rest area buildings.

D Measurement

The department will measure Picnic Shelters as each individual unit acceptably completed. Picnic Tables Single Pedestal and concrete sidewalk will be measured separately.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0060.01	Rest Area Picnic Shelters	Each

Payment for Rest Area Picnic Shelters is full compensation for providing materials, transporting, disposal, furnishing and installing all materials and equipment, and for supplying all labor, tools, equipment, and incidentals necessary to complete the work.

10. Grading, Shaping and Finishing Picnic Shelters, Item SPV.0060.02

A Description

This special provision describes excavating, backfilling, grading, shaping, finishing, topsoil, seeding, fertilizing and mulching the picnic shelter building sites, as necessary to restore the landscape around the new picnic shelters, as shown on the plans and in accordance to the pertinent requirements of the standard specifications and as hereinafter provided.

B Materials

Use seed mixture number 40.

C Construction

Excavate, dispose of excess material, backfill, grade, shape, and finish slopes for the picnic shelters at the locations shown in the plans. Furnish the following materials conforming to the following:

Common excavation and material disposal.....	standard spec 205
Borrow.....	standard spec 208
Topsoil.....	standard spec 625
Mulching.....	standard spec 627
Fertilizer.....	standard spec 629
Seeding.....	standard spec 630

D Measurement

The department will measure Grading, Shaping, and Finishing Picnic Shelters as each individual location, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0060.02	Grading, Shaping, and Finishing Picnic Shelters	Each

Payment is full compensation for furnishing all excavating, grading, shaping, and compacting; and for providing and placing fill, topsoil, fertilizer, seed, and mulch.

The concrete items will be measured and paid for under the pertinent items provided in the contract.

11. Rest Area Toilet Replacement, Item SPV.0060.03.

A Description

This special provision describes replacing existing rest room toilets in the rest area buildings, as shown on the plans, in accordance to the pertinent requirements of the standard specifications, in accordance to the General Requirements for Building Construction and Technical Specifications, and as hereinafter provided.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
093001	Ceramic Wall Tiling
093002	Ceramic Floor Tiling
224000	Plumbing Specialties

C (Vacant)**D Measurement**

The department will measure Rest Area Toilet Replacement as each individual removed and replaced toilet, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0060.03	Rest Area Toilet Replacement	Each

Payment is full compensation for removing the existing toilet, supply and waste piping revisions, repairing wall or floor tiles, installing a new toilet, and all incidental construction needed for a complete installation.

12. 400 W Light Fixture Replacement, Item SPV.0060.04.**A Description**

This special provision describes replacing existing 400 W HID light fixtures with LED luminaire in the rest area buildings and rewiring as needed to provide photocell control, as shown on the plans, in accordance to the pertinent requirements of the standard specifications, in accordance to the General Requirements for Building Construction and Technical Specifications, and as hereinafter provided.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
260500	Common Work Results for Electrical
260526	Grounding and Bonding for Electrical Systems
260923	Lighting Control Devices
262726	Wiring Devices
265100	Lighting

C (Vacant)**D Measurement**

The department will measure 400 W Light Fixture Replacement as each individual removed and replaced light, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0060.04	400 W Light Fixture Replacement	Each

Payment is full compensation for removing the existing luminaire, installing or adjusting electrical feeds, adding photocells as needed, installing a new LED luminaire, and all incidental construction needed for a complete installation.

13. 250 W Light Fixture Replacement, Item SPV.0060.05.**A Description**

This special provision describes replacing existing 250 W HID light fixtures with LED luminaire in the rest area buildings and rewiring as needed to provide photocell control, as shown on the plans, in accordance to the pertinent requirements of the standard specifications, in accordance to the General Requirements for Building Construction and Technical Specifications, and as hereinafter provided.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
260500	Common Work Results for Electrical
260526	Grounding and Bonding for Electrical Systems
260923	Lighting Control Devices
262726	Wiring Devices
265100	Lighting

C (Vacant)**D Measurement**

The department will measure 250 W Light Fixture Replacement as each individual removed and replaced light, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0060.05	250 W Light Fixture Replacement	Each

Payment is full compensation for removing the existing luminaire, installing or adjusting electrical feeds, adding photocells as needed, installing a new LED luminaire, and all incidental construction needed for a complete installation.

14. Disconnect Light Fixture, Item SPV.0060.06.

A Description

This special provision describes abandoning the existing luminaire and terminating wiring to the light fixture in accordance to National Electrical Code requirements, as shown on the plans, in accordance to the pertinent requirements of the standard specifications, in accordance to the General Requirements for Building Construction and Technical Specifications, and as hereinafter provided.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
260500	Common Work Results for Electrical
260526	Grounding and Bonding for Electrical Systems
262726	Wiring Devices

C (Vacant)

D Measurement

The department will measure Disconnect Light Fixture as each individual disconnected light, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0060.06	Disconnect Light Fixture	Each

Payment is full compensation for disconnecting the existing luminaire, and all incidental construction needed for a complete installation.

15. Rest Area 9 Asphalt Shingle Roof Replacement, Item SPV.0105.01.

A Description

This work consists of tearing off existing shingles, drip edge and roofing felt; replacing deteriorated sheathing, replacing gutters, cladding soffits, disposal; and furnishing and installing new shingles and associated roofing materials as shown in the plans and these specifications, and in accordance to the General Requirements of Building Construction and Technical Specifications.

B Materials

Submit product data and installation instructions for each major roofing product. Include manufacturer's certification or other data to substantiate compliance with these specifications.

Submit actual samples of roof finish and exposed metal components; samples will be reviewed for color and texture only.

Provide materials and roofing systems that have been tested, listed, and labeled by UL for "Class A" rating.

B.1 Shingles

Fiberglass roof shingles with ceramic mineral granule surface, ASTM D3018, Type I, D3462, 12" x 36", min. 300#/square, 4 bundles per square, self sealing; architectural, CertainTeed "Independence", Manville Roofing Systems; Georgia-Pacific; GAF; or approved equal. 30-year minimum warranty. Provide manufacturer's warranty.

Color to be equal to CertainTeed "Burnt Sienna."

B.2 Nails

Large head, hot-dip zinc coated steel or aluminum roofing nails as recommended by shingle manufacturer; length shall be sufficient to penetrate deck min, 1/2-inch.

B.3 Moisture Barrier

Forty mil polymer-modified asphalt membrane bonded to polyethylene sheeting; Grace/Ice and Water Shield, Owens-Corning/Deck-Dri, or equal. Provide widths as needed to apply as noted in 'C.2 Installation' and as indicated on the drawings.

B.4 Asphalt Saturated Felt

ASTM D226, 30# type.

B.5 Metal Roof Edge

Unpainted aluminum or galvanized metal roof edge to support butt end of first row of shingles and to provide drip at roof perimeter.

B.6 Gutters and Downspouts

Gutters, coil stock and downspouts shall be seamless aluminum; 0.032 inches in thickness. Gutters shall be of 8K style and size. Downspouts shall be of appropriate size to accommodate the 8K gutter capacity. Hangars shall be K style to properly secure the gutters. Gutters, downspouts and coil stock shall be of brown or dark bronze in color.

B.7 Valley Flashing

Prefinished galvanized metal flashing shall be provided in all valleys in accordance to requirements on the Roof Replacement Plan drawing.

C Construction

C.1 Tear-off

Roofing materials have been tested for asbestos-containing materials (ACM). No detectable ACM was found in the existing roofing materials.

Existing plywood sheathing and fascia shall be thoroughly examined for deterioration. Plywood sheathing with duct holes and deteriorated plywood sheathing shall be removed and replaced.

After removal, a magnet shall be used to locate and remove loose nails and metal pieces on the ground. All waste materials shall be properly disposed of off-site.

C.2 Installation

Deliver materials in original unopened factory packaging. Store materials in dry area and protect from water and direct sunlight. Replace broken or damaged materials. Follow manufacturer's instructions.

Examine substrates and notify in writing of defects. Do not install shingles until defects are corrected. Install new flashings. Install ridge vents as needed according to manufacturer recommendations.

Install metal roof edge along eaves with moisture barrier on top. Along rakes, install moisture barrier first with metal edge on top.

Install moisture barrier in accordance to manufacturer's instructions, with primer if required. Provide moisture barrier minimum 68-inches from eaves up the slope to a line not less than 24-inches inside of exterior wall. Provide minimum 68-inch wide moisture barrier centered at valleys, minimum 36-inches wide centered at ridges and 36" minimum along rake edges. Provide moisture barrier minimum 24-inches wide and minimum 8-inches high at junctions with higher walls with top of moisture barrier protected by metal step and counter flashing. Balance of roof shall receive single layer of underlayment felt lapping each course 2-inches minimum to shed water downslope. Apply felt horizontally over wood roof structure.

Install shingles in accordance to manufacturer's printed instructions using nails. Stapling of shingles will not be allowed.

Size and cut coil stock to cover exposed fascia. Install and secure coil stock per manufacturers' guidelines and accepted industry standards. Install 8K gutters and downspouts per manufacturers' guidelines and accepted industry standards. Hardware to secure downspouts shall be as recommended by manufacturer and color matched where visible. All securing screws, nails, etc. shall be stainless steel where hidden from view and galvanized steel or as suggested by gutter manufacturer and match painted in visible areas.

C.3 Manufacturer's Warranty

Provide manufacturer materials warranty information to engineer.

D Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
061000	Rough Carpentry
076200	Flashing and Sheet Metal
079200	Joint Sealants

E Measurement

The department will measure Rest Area 9 Asphalt Shingle Roof Replacement as a single complete lump sum unit of work, acceptably completed.

F Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0105.01	Rest Area 9 Asphalt Shingle Roof Replacement	LS

Payment is full compensation for tearing off existing shingles, drip edge, roofing felt; and sheathing; disposal; disposal fees; fees for permits; and for furnishing and installing new shingles, sheathing, drip edge, and moisture barrier and roofing felt, fascia, soffits.

16. Rest Area 10 Asphalt Shingle Roof Replacement, Item SPV.0105.02.**A Description**

This work consists of tearing off existing shingles, drip edge and roofing felt; replacing deteriorated sheathing, replacing gutters, cladding soffits, disposal; and furnishing and installing new shingles and associated roofing materials as shown in the plans, these specifications, and in accordance to the General Requirements for Building Construction and Technical Specifications.

B Materials

Submit product data and installation instructions for each major roofing product. Include manufacturer's certification or other data to substantiate compliance with these specifications.

Submit actual samples of roof finish and exposed metal components; samples will be reviewed for color and texture only.

Provide materials and roofing systems that have been tested, listed, and labeled by UL for "Class A" rating.

B.1 Shingles

Fiberglass roof shingles with ceramic mineral granule surface, ASTM D3018, Type I, D3462, 12" x 36", min. 300#/square, 4 bundles per square, self sealing; architectural, CertainTeed "Independence", Manville Roofing Systems; Georgia-Pacific; GAF; or approved equal. 30-year minimum warranty. Provide manufacturer's warranty.

Color to be equal to CertainTeed "Burnt Sienna."

B.2 Nails

Large head, hot-dip zinc coated steel or aluminum roofing nails as recommended by shingle manufacturer; length shall be sufficient to penetrate deck min, 1/2-inch.

B.3 Moisture Barrier

Forty mil polymer-modified asphalt membrane bonded to polyethylene sheeting; Grace/Ice and Water Shield, Owens-Corning/Deck-Dri, or equal. Provide widths as needed to apply as noted in 'C.2 Installation' and as indicated on the drawings.

B.4 Asphalt Saturated Felt

ASTM D226, 30# type.

B.5 Metal Roof Edge

Unpainted aluminum or galvanized metal roof edge to support butt end of first row of shingles and to provide drip at roof perimeter.

B.6 Gutters and Downspouts

Gutters, coil stock and downspouts shall be seamless aluminum; 0.032 inches in thickness. Gutters shall be of 8K style and size. Downspouts shall be of appropriate size to accommodate the 8K gutter capacity. Hangars shall be K style to properly secure the gutters. Gutters, downspouts and coil stock shall be of brown or dark bronze in color.

B.7 Valley Flashing

Prefinished galvanized metal flashing shall be provided in all valleys in accordance to requirements on the Roof Replacement Plan drawing.

C Construction**C.1 Tear-off**

Roofing materials have been tested for asbestos-containing materials (ACM). No detectable ACM was found in the existing roofing materials.

Existing plywood sheathing and fascia shall be thoroughly examined for deterioration. Plywood sheathing with duct holes and deteriorated plywood sheathing shall be removed and replaced.

After removal, a magnet shall be used to locate and remove loose nails and metal pieces on the ground. All waste materials shall be properly disposed of off-site.

C.2 Installation

Deliver materials in original unopened factory packaging. Store materials in dry area and protect from water and direct sunlight. Replace broken or damaged materials. Follow manufacturer's instructions.

Examine substrates and notify in writing of defects. Do not install shingles until defects are corrected. Install new flashings. Install ridge vents as needed according to manufacturer recommendations.

Install metal roof edge along eaves with moisture barrier on top. Along rakes, install moisture barrier first with metal edge on top.

Install moisture barrier in accordance to manufacturer's instructions, with primer if required. Provide moisture barrier minimum 68-inches from eaves up the slope to a line not less than 24-inches inside of exterior wall. Provide minimum 68-inch wide moisture barrier centered at valleys, minimum 36-inches wide centered at ridges and 36" minimum along rake edges. Provide moisture barrier minimum 24-inches wide and minimum 8-inches high at junctions with higher walls with top of moisture barrier protected by metal step and counter flashing. Balance of roof shall receive single layer of underlayment felt lapping each course 2-inches minimum to shed water downslope. Apply felt horizontally over wood roof structure.

Install shingles in accordance to manufacturer's printed instructions using nails. Stapling of shingles will not be allowed.

Size and cut coil stock to cover exposed fascia. Install and secure coil stock per manufacturers' guidelines and accepted industry standards. All securing screws, nails, etc. shall be stainless steel where hidden from view and galvanized steel or as suggested by gutter manufacturer and match painted in visible areas.

C.3 Manufacturer's Warranty

Provide manufacturer materials warranty information to engineer.

D Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
061000	Rough Carpentry
076200	Flashing and Sheet Metal
079200	Joint Sealants

E Measurement

The department will measure Rest Area 10 Asphalt Shingle Roof Replacement as a single complete lump sum unit of work, acceptably completed.

F Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0105.02	Rest Area 10 Asphalt Shingle Roof Replacement	LS

Payment is full compensation for tearing off existing shingles, drip edge, roofing felt; and sheathing; disposal; disposal fees; fees for permits; and for furnishing and installing new shingles, sheathing, drip edge, and moisture barrier and roofing felt, fascia, soffits.

17. Rest Area 9 Family Assisted Restrooms, Item SPV.0105.03.

A Description

This section includes the work for constructing the addition of a new family assisted restroom within the existing foot print of each main building at Rest Areas 9, and all incidental items necessary to complete the work in accordance to the plans and General Requirements for Building Construction and Technical Specifications. The new restrooms will be located in the lobby area of the existing buildings.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
061000	Rough Carpentry
076200	Flashing and Sheet Metal
079200	Joint Sealants
081113	Hollow Metal Doors and Frames
084113	Aluminum Entrances, Windows and Glazing
087100	Door Hardware
092900	Gypsum Board Systems
093001	Ceramic Wall Tiling
093002	Ceramic Floor Tiling
099100	Painting
101400	Interior Signs
102800	Toilet and Bath Accessories
224000	Plumbing Specialties
260500	Common Work Results for Electrical
260519	Low-Voltage Electrical Power Conductors and Cables
260526	Grounding and Bonding for Electrical Systems
260529	Hangars and Supports for Electrical Systems
260533	Raceways and Boxes for Electrical Systems
260923	Lighting Control Devices
262416	Panelboards
262726	Wiring Devices
265100	Lighting

C (Vacant)

D Measurement

The department will measure Rest Area 9 Family Assisted Restrooms as a single lump sum unit of work, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0105.03	Rest Area 9 Family Assisted Restrooms	LS

Payment is full compensation for providing removal, disposal, transporting, furnishing and installing all materials and equipment, activating and testing, and for supplying all labor, tools, equipment, and incidentals necessary to complete the work.

18. Rest Area 10 Family Assisted Restrooms, Item SPV.0105.04.

A Description

This section includes the work for constructing the addition of a new family assisted restroom within the existing foot print of each main building at Rest Areas 10, and all incidental items necessary to complete the work in accordance to the plans and General Requirements for Building Construction and Technical Specifications. The new restrooms will be located in the lobby area of the existing buildings.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
061000	Rough Carpentry
076200	Flashing and Sheet Metal
079200	Joint Sealants
081113	Hollow Metal Doors and Frames
084113	Aluminum Entrances, Windows and Glazing
087100	Door Hardware
092900	Gypsum Board Systems
093001	Ceramic Wall Tiling
093002	Ceramic Floor Tiling
099100	Painting
101400	Interior Signs
102800	Toilet and Bath Accessories
224000	Plumbing Specialties
260500	Common Work Results for Electrical
260519	Low-Voltage Electrical Power Conductors and Cables
260526	Grounding and Bonding for Electrical Systems
260529	Hangars and Supports for Electrical Systems
260533	Raceways and Boxes for Electrical Systems
260923	Lighting Control Devices
262416	Panelboards
262726	Wiring Devices
265100	Lighting

C (Vacant)

D Measurement

The department will measure Rest Area 10 Family Assisted Restrooms as a single lump sum unit of work, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0105.04	Rest Area 10 Family Assisted Restrooms	LS

Payment is full compensation for providing removal, disposal, transporting, furnishing and installing all materials and equipment, activating and testing, and for supplying all labor, tools, equipment, and incidentals necessary to complete the work.

19. Rest Area 9 Interior Painting, Item SPV.0105.05.**A Description**

This special provision describes interior painting of the rest area building as described in Part 1 of Section 099100, in accordance to the General Requirements for Building Construction and Technical Specifications.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
099100	Painting

C Construction

The contractor shall paint the building in accordance to manufacturer's recommendations and according to the pertinent requirements of Part 3 of Section 099100.

D Measurement

The department will measure the Rest Area 9 Interior Painting as a lump sum unit of work for completion of all interior painting noted on the plans, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0105.05	Rest Area 9 Interior Painting	LS

Payment is full compensation for surface preparation, cleaning, priming painting, cleanup, all labor, materials, equipment and incidental items needed to complete the work.

20. Rest Area 10 Interior Painting, Item SPV.0105.06.**A Description**

This special provision describes interior painting of the rest area building as described in Part 1 of Section 099100, in accordance to the General Requirements for Building Construction and Technical Specifications.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
099100	Painting

C Construction

The contractor shall paint the building in accordance to manufacturer's recommendations and according to the pertinent requirements of Part 3 of Section 099100.

D Measurement

The department will measure the Rest Area 10 Interior Painting as a lump sum unit of work for completion of all interior painting noted on the plans, acceptably completed.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0105.06	Rest Area 10 Interior Painting	LS

Payment is full compensation for surface preparation, cleaning, priming painting, cleanup, all labor, materials, equipment and incidental items needed to complete the work.

21. 5/8-Inch Plywood Decking, Item SPV.0165.01.**A Description**

This section includes the work for removing rotted and failed areas of existing plywood decking and replacing it with new plywood decking, and all incidental items necessary to complete the work in accordance to the plans and General Requirements for Building Construction and Technical Specifications.

B Technical Specifications

Technical specification sections that apply to this item include:

010000	Summary of Work
061000	Rough Carpentry

C Construction

The area of plywood decking replacement necessary is unknown and will be determined during the tear off of the existing roof. Identify potential areas of plywood decking to be replaced and verify the locations with the engineer prior to removal. The square foot area of plywood decking replacement required is estimated to be approximately 640 square feet per roof. Be aware that the actual square footage required may be significantly less than or greater than the estimated quantity.

D Measurement

The department will measure 5/8-Inch Plywood Decking by the square foot acceptably completed. The measured area equals the sum of the completed areas, measured on the plane of the surface. The department will not measure cut-offs.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
SPV.0165.01	5/8-Inch Plywood Decking	SF

Payment for 5/8-Inch Plywood Decking is full compensation for removal and disposal, providing, transporting, furnishing and installing, all installation materials including nails, screws, adhesives, and for supplying all labor, tools, equipment, and incidentals necessary to complete the work.

APPENDIX A – REFERENCE DRAWINGS

DIVISION 1 - GENERAL REQUIREMENTS

010000 – Summary of Work

PART 1 GENERAL

1.01 Summary

A. Work Included in this package includes the following as further described in the Special Provisions and the attached drawings and specifications:

1. Replace existing water closets.
2. Construct new family assisted restrooms.

B. Work Not Included in this package:

1. Reroofing and picnic shelter work covered in other work-orders/packages.

1.02. General Requirements

A. Terms and Conditions of the Form of Agreement with Wisconsin Department of Transportation apply to the work.

B. Any file data or drawings of the existing facilities provided are for general reference only. Accuracy or completeness of file data/drawings is not guaranteed.

C. Contractor shall visit existing site/facility and review all documents provided to verify and take into account actual field conditions as may be pertinent to the work prior to submitting a proposal. Coordinate all site visits with the WIDOT representative.

D. The contractor shall field-check all pertinent dimensions and will be responsible for the correct fit of all components.

E. Any conflicts or discrepancies in the contract documents shall be brought to the Architect/Engineer's attention for his assessment and determination which shall be final.

F. Work includes all labor, materials, equipment, services, fees, and any and all incidental work necessary to properly and completely perform the work and provide (furnish and install) complete systems, ready for use, meeting the given parameters.

G. Contractor shall perform all layout necessary from appropriate reference points.

H. Coordinate sequencing of all work with the Owner and the work of other contractors who may be working concurrently on site. Coordinate each trade to receive and accommodate the work of other trades.

- I. Coordinate work in or near existing facilities with the Owner and perform portions of the work after facility operating hours as necessary to allow continued use of the facility by the public and the Owner, with a minimum of interruptions.
- J. Comply with Owner requirements and protocols to maintain security of facilities and safety of the Owner's employees and the public.
- K. Provide all barriers necessary for public safety and for security of the contractor's work and the Owner's property throughout the work.
- L. Provide temporary controls and barriers to protect adjacent spaces and occupants from dust, odors, welding flash, and noise.
- M. Provide temporary measures as necessary to effectively control dust, debris, pollution and erosion and comply with applicable requirements of governing agencies.
- N. Provide temporary services of lights, electrical power and water if/as needed to complete the work. Extend from existing building utilities or arrange for temporary service as needed. Do not exceed ratings of existing systems. Any temporary service installation/removal costs shall be paid by the Contractor. Any energy cost for heating temporary enclosures shall be paid by the Contractor. Energy costs for non-heat related power and lighting will be paid by the Owner.
- O. Provide temporary sanitary facilities for use by Contractor personnel, in location acceptable to Owner.
- P. Provide temporary heat and/or cooling if/as needed to properly construct the work, using methods and equipment that will not adversely affect the finished installation. Provide temporary heat and/or cooling if/as necessary to maintain temperature of occupied spaces of existing buildings during temporary shutdowns of building HVAC equipment.
- Q. Provide temporary portable fire extinguishers suitable for all possible classes and types of fire, in number and locations appropriate to the work, including in the immediate vicinity of welding operations.
- R. Do not bring materials to site until needed for progress of the work. Coordinate location and limits of temporary staging areas with Owner. Owner assumes no responsibility for materials stored on or off site.
- S. Contractors shall obtain all permits necessary for construction of their work and shall pay all related fees.
- T. Completely restore or replace any existing materials or finishes damaged while performing the work to match adjacent materials and finishes, to the Owner's satisfaction.

- U. All joints and penetrations in building construction shall be sealed weather-tight and insect-proof with approved materials. All joints and penetrations in fire-rated construction shall be fire-safed to the appropriate rating with approved systems.
- V. All products and materials shall be used, applied and installed in strict accordance with manufacturer's recommendations and installed with top quality workmanship by properly trained experienced tradesmen. All work shall meet pertinent industry codes and standards.
- W. Contractor is responsible to employ whatever quality control/quality assurance measures may be necessary to ensure compliance with the contract documents, whether called for or not. Contractor shall hire a qualified independent testing agency to perform and provide test results for any specific field testing required by the contract documents.
- X. Provide approved products and materials as specified. Submit confirming data for review and records as noted here and in other sections. Do not submit unapproved substitutions. Provide minimum of 4 sets/copies unless otherwise directed. Review will only be for information and general conformance with the design concept and Contract Documents. Contractor shall remain fully responsible for compliance of products and materials, correctness of quantities and dimensions, fit-up, installation requirements and coordination needed to meet all detailed requirements of the contract. Any and all proposed deviations from the contract requirements shall be fully highlighted and detailed in a written notice accompanying the actual submittal. All such proposed deviations will be subject to Architect's/Engineer's approval.
- Y. Proposed substitutions for specified or "basis-of-design" products will only be considered in advance of formal submittals, at Architect's/Engineer's sole discretion, and only if accompanied by a sufficiently detailed feature and performance comparison to the specified product for complete evaluation.
- Z. Where not specifically pre-selected, Architect/Engineer will select color, pattern and texture of each product from manufacturer's full range of options, including both standard and premium items.
- AA. Inspect all substrates prior to proceeding with subsequent work. Proceeding with work will imply contractor's acceptance of conditions.
- BB. Alert Owner to the presence of potentially hazardous materials or contaminants.
- CC. Remove and replace all work that is defective or does not meet specified requirements.
- DD. Clean up work debris daily. Provide temporary waste containers appropriate for all construction debris, in location approved by Owner. Provide tarps to capture and contain nails and debris and to exclude debris from lawns and landscaping. Perform thorough magnetic nail sweeps immediately after removal of existing materials as applicable to the work.

- EE. Dispose of all removed and unused material and debris off-site in compliance with governing rules and agencies.
- FF. At completion of project, thoroughly clean, sweep, wash, polish, and vacuum all work as necessary to remove foreign matter, splatter, spots and soil and put all work and equipment in a complete and finished condition ready for use.
- GG. Keep a current set of project record documents at the jobsite marked with as-built conditions that vary from the original documents, and showing locations and vertical positions (eg: inverts) of underground and other concealed work and utilities with dimensions from permanent reference points. Submit record documents at project completion.
- HH. Start up, clean, test, adjust, train Owner personnel, and provide the Owner with test results; use, care, operating and maintenance data; spare materials/parts lists; wiring diagrams and warranties for all systems provided. Provide minimum 3 bound copies of written data. Deliver spare parts and extra materials as specified.
- II. All materials and workmanship shall be guaranteed for a period of not less than one (1) year from the date of acceptance of the entire project by the Owner. Provide other warranties as noted in specifications.

DIVISION 6 – WOOD, PLASTICS and COMPOSITES

061000 Rough Carpentry

PART 1 GENERAL

1.01 Summary

A. Provide rough carpentry work as shown and as specified. Comply with applicable provisions of General Requirements.

1.02 Abbreviations

ALSC - American Lumber Standards Committee.
APA - The Engineered Wood Association.
AWPA - American Wood Preservers Association.
SPIB - Southern Pine Inspection Bureau.
WCLIB - West Coast Lumber Inspection Bureau.
WWPA - Western Wood Products Association.

1.03 Quality Assurance

A. Wood products shall be factory-marked to identify type, grade, inspection agency, producing mill and other qualities as specified.

1.04 Coordination

A. Obtain measurements and verify dimensions shown and shop drawing details before proceeding with carpentry work, wherever possible. Correlate location of furring, nailers, blocking, grounds and similar supports so that attached work will comply with design requirements. Fit carpentry work to other work. Scribe and cope as required for accurate fit.

B. Materials and installation requirements for other work, commonly assigned to carpentry trade, may be specified in other sections of these specifications. Contractor is responsible for assignment of such other work to proper trade.

1.05 Delivery, Storage and Handling

A. Keep carpentry materials dry during delivery. Store lumber and plywood in stacks with provisions for air circulation within stacks. Protect bottom of stacks against contact with damp or wet surfaces. Protect exposed materials against weather. Do not store dressed or treated lumber or plywood outdoors. Replace damaged materials.

PART 2 PRODUCTS

2.01 Lumber

A. Lumber shall comply with U.S. Product Standard PS-20 for American Softwood Lumber, U. S. Dept. of Commerce, and with rules of applicable manufacturer's association or authorized inspection bureau under which each species of lumber is produced.

B. Nominal sizes shown and specified refer to undressed lumber dimensions. Dress lumber four sides (S4S), unless otherwise shown or specified, and work to shapes and patterns shown. Detailed dimensions show actual sizes required.

C. Load bearing members: Unless otherwise indicated, provide No. 2 or better Douglas Fir, Western Larch, Western Hemlock (WWPA or WCLIB), or Southern Pine (SPIB) meeting the following design values (in psi):

1. Joists, rafters, and headers: not less than 1200 Fb.

D. Non-load bearing members: "No. 2" grade Douglas Fir, Western Larch, Western Hemlock (WWPA or WCLIB), or Southern Pine (SPIB).

E. Wood for support or attachment of other work such as cant strips, bucks, nailers, blocking, furring, grounds, stripping and similar members: "Standard" grade light framing or "No. 2 Common" grade boards of any WWPA, WCLIB, or SPIB species.

F. Maintain 19% maximum moisture content for all pieces of construction lumber. Mark lumber "DRY."

2.02 Plywood

A. Plywood shall comply with U. S. Product Standard PS-1 for Construction and Industrial Plywood, U.S. Dept. of Commerce, except as otherwise specified.

B. Plywood for interior exposure shall be interior-type plywood, APA Grade A-D or better. MDO where noted.

C. Plywood sheathing on exterior of building shall comply with U.S. Product Standard PS-2, and shall be Exterior-type plywood, APA Rated Grade C-C plugged sheathing in thickness as follows:

1. Roof sheathing: 5/8", 40/20 span rating
2. Building walls: 1/2", 24/16 span rating.

D. Plywood decking on interior elevated floors, framed ceilings: 3/4" T&G Sturdi-Floor

2.03 Wood Preservative Treatment

A. Lumber and plywood designated as "Treated" shall comply with the applicable requirements of AWPA C2 (lumber) and C9 (plywood) and shall bear quality mark of an inspection agency approved by ALSC's Board of Review.

B. Pressure treat the following items with waterborne preservatives for above ground use to a minimum retention of 0.25 lb./cu. ft.

1. Wood cants, nailers, blocking, stripping, and members in connection with roofing, flashing, concrete, masonry, vapor barriers, and waterproofing.

C. If wood is cut after treatment, coat cut surfaces with heavy brush coat of same preservative used for treatment in accordance to AWP4 M4.

2.04 Rough Hardware

A. Provide nails, fasteners, anchors, etc., as designated and as required for proper assembly and erection. Rough hardware shall be of size to rigidly secure members in place.

B. Where rough carpentry wood is exposed to weather, in ground contact, or in areas of high humidity, provide hot-dip galvanized hardware (ASTM A153).

C. Provide stainless steel fasteners and hardware where in contact with preservative-treated wood.

2.05 Framing Connectors and Anchors

A. Provide anchors as described on Drawings complete with manufacturer's fasteners.

2.06 Building Felt

A. 15 lb. asphalt saturated roofing felt.

PART 3 EXECUTION

3.01 Workmanship

A. Carpentry work shall be performed by skilled carpenters. Framing lumber shall be installed level, true and plumb. Notches, cuts, holes, and other fabrication shall be made clean, even and true. Carpenter shall inspect framing lumber before installation; lumber with defects that impair quality or safety shall be rejected.

3.02 Installation, General

A. Use sound, thoroughly seasoned, well-manufactured materials of longest practical lengths and sizes to minimize jointing.

B. Use materials free from warp which cannot be easily corrected by anchoring and attachment. Discard warped material and material with defects which impair the quality of the work.

C. Securely attach carpentry work to substrates by anchoring and fastening as shown or scheduled on drawings. If not indicated provide minimum fasteners required by Building Code and applicable industry standards. Provide washers under bolt heads and nuts in contact with wood. Nail plywood to comply with the recommendations of APA. Countersink nail heads on exposed carpentry work and fill holes. Use stainless steel connectors and fasteners where in contact with preservative treated wood, and elsewhere if noted.

D. Set carpentry work accurately to required levels and lines with members plumb and true and accurately cut and fitted. Shim with metal or slate for full-bearing on concrete or masonry substrates.

E. Furnish and erect blocking and nailers for installation of other equipment that may be required to properly complete the work. Provide framing around items recessed into walls. Cooperate and coordinate with others of their needs for blocking, nailers, and furring.

F. Install framing connectors in strict conformance to manufacturer's instructions, using fasteners specified or provided by manufacturer. Provide uplift connectors at both ends of all roof members.

G. Comply with member sizes, spacing, and configurations indicated, and fastener size and spacing indicated, but not less than required by applicable codes and AFPA Wood Frame Construction Manual.

H. Construct double joist headers at floor and ceiling openings and under wall stud partitions that are parallel to floor joists; use metal joist hangers unless otherwise detailed.

I. Frame openings with two or more studs at each jamb; support headers on cripple studs.

3.03 Installation of Sheathing

A. Roof Sheathing: Secure panels perpendicular to framing members, with ends staggered and sheet ends over firm bearing.

1. Two-span condition, minimum, with long/strength axis perpendicular to supports.
2. Provide solid edge blocking between panels.
3. Provide solid edge blocking at perimeter edges
4. Nail panels to framing; staples are not permitted.
 - a. Nail sheathing as follows with 10d common nails:
 - 1) 4 in. on center at panel edges, diaphragm edges, and blocking.
 - 2) 12 in. on center at intermediate supports/field of panel.
5. Provide 1/8" spacing between panels at edge and end joints.

3.04 Tolerances

A. Framing Members: 1/4 inch from true position, maximum.

B. Variation from Plane (Other than Floors): 1/4 inch in 10 feet maximum, and 1/4 inch in 30 feet maximum.

3.05 Cleaning

A. Waste Disposal:

1. Comply with applicable regulations.
2. Do not burn scrap on project site.
3. Do not burn scraps that have been pressure treated.
4. Do not send materials treated with pentachlorophenol, CCA, or ACA to co-generation facilities or "waste-to-energy" facilities.

- B. Do not leave any wood, shavings, sawdust, etc. on the ground or buried in fill.
- C. Prevent sawdust and wood shavings from entering the storm drainage system.

DIVISION 7 - THERMAL AND MOISTURE PROTECTION

076200 Flashing and Sheet Metal

PART 1 GENERAL

1.01 Summary

- A. Provide flashing and sheet metal work as specified and necessary for actual conditions.

1.02 Codes and Standards

- A. Except as otherwise shown or specified, comply with applicable recommendations and details of SMACNA "Architectural Sheet Metal Manual".

1.03 Submittals

- A. Submit details of flashing, joints, attachments, connections to adjoining work, protrusions, and penetrations.

PART 2 PRODUCTS

2.01 Prefinished Metal

- A. Preformed 24 gauge galvanized steel sheet, commercial quality, ASTM A653, coating designation G90, extra smooth, primed and finished one side with 1.0 + 0.1 mil dry thickness fluoropolymer coating and on reverse side with 0.3 - 0.4 mil dry thickness white wash coat. Provide strippable plastic film on fluoropolymer coated side.
- B. Provide one of the following or equal:
 - Berridge Mfg - Kynar 500.
 - Copper Sales - Una-Clad.
 - Foremost Mfg. - Kynar 500.
 - Petersen Aluminum - Pac-Clad.
 - Vincent Metals - ColorKlad.
- C. Material shall be warranted against fading, chalking, and loss of film integrity for 20 years, non-prorated.
- D. Color to match roofing unless otherwise noted or directed.

2.03 Caulking

- A. See Section 079200.

2.04 Fasteners

- A. Use stainless steel or aluminum pop rivets, sheet metal screws, or other compatible fasteners. Screws located in horizontal flashing pieces shall have a neoprene washer. Fasteners exposed to view shall match flashing.

2.05 Fabrication

- A. Fabricate metal flashings for roof penetrations, and as necessary for actual conditions. Except as otherwise shown or specified, comply with recommendations and instructions of manufacturer of sheet metal to be installed. Provide matching cover plates, fasteners, and keepers.
- B. Separate dissimilar metals by painting each metal surface in contact area with a heavy application of bituminous coating, or by other permanent separation as recommended by manufacturer.

PART 3 EXECUTION

3.01 Installation - Fabricated Sheet Metal

- A. Install sheet metal work, flashings and appurtenances with lines and corners of exposed units true and accurate. Form exposed faces flat and free of buckles, excessive waves and avoidable tool marks, considering the temper and reflectivity of metal. Provide uniform, neat seams with minimum exposure of solder, welds and sealant. Except as otherwise shown, fold back sheet metal to form a concealed hem on exposed edges.
- B. Conceal fasteners and expansion provisions wherever possible in exposed work, and locate to minimize possibility of leakage. Cover and seal work as required for a tight installation.
- C. Insert flashings into reglets and similar retainers and provide mechanical anchorage as shown or, if not shown, as recommended by manufacturer of flashing and reglet devices.
- D. Materials which are to be built-in to work of other trades shall be delivered to site in time to avoid delay in construction progress.
- E. Install products with proper allowance for expansion and contraction of materials, so as to prevent electrolysis between dissimilar metals, and so as to provide a watertight construction.

3.02 Joints

- A. Provide for thermal expansion of items exposed for more than 15'0" continuous length. Maintain a watertight installation at expansion seams. Locate expansion seams as shown or, if not shown, at 10'0" intervals and 2'0" each side of corners and intersections.
- B. Where sealant-filled expansion joints are used, embed hooked flanges of joint members not less than 1" into sealant. Form joints to completely conceal sealant. When ambient temperature is 40-70 deg. F., set joint members for 50% movement either way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant type joints at temperatures below 40 deg. F.

3.03 Cleaning

- A. Upon completion, thoroughly clean exposed sheet metal by methods recommended by manufacturer.

079200 Joint Sealants

PART 1 GENERAL

1.01 Summary

A. Provide joint sealer work as shown and as specified. Comply with applicable provisions of General Requirements.

1.02 Submittals

A. Submit manufacturer's product data, recommendations and installation instructions for each type of sealant, caulking compound and associated materials in accordance to Division 1. Include manufacturer's published data, letter of certification or certified test laboratory report that each material complies with requirements and is intended for applications shown.

B. Furnish color charts and actual material color samples; color will be selected from manufacturer's colors.

1.03 Quality Assurance

A. Employ only skilled, experienced tradesmen for sealant application.

PART 2 PRODUCTS

2.01 General Building Sealants

A. Interior: Acrylic terpolymer, solvent-based, one part, thermo-plastic sealant compound, solids not less than 95% acrylic; complying with ASTM C920, Type S, Grade NS; recommended by manufacturer for general use as an exposed building construction sealant. Furnish Tremco Mono, Pecora 60 Unicrylic, DAP Acrylic, or equal.

B. Control joints in horizontal tile floors shall be sealed with an urethane sealant complying with ASTM C920, type S or M, Grade P, Class 25, use T with a Shore A hardness of 35 or greater. Control joints in vertical surfaces shall be the same as above except grade NS and use NT.

C. Exterior: Urethane, one-part, air curing, elastomeric sealant, complying with ASTM C920, Type S, Grade NS, Class 25; Tremco Dymonic, Pecora Dynatrol I, Sika Sikaflex 1a, Sonoborn Sonolastic NP1, or equal. Colors to be selected from manufacturer's standard colors for various substrates, as approved by A/E.

2.02 Washroom and Toilet Room Sealant

A. For plumbing fixtures provide silicone rubber, mildew-resistant; GE SCS 1702, Dow Corning 786, or equal, in colors to match adjacent surfaces subject to Architect's / Engineer's approval.

2.03 Joint Cleaner

A. Provide type of joint cleaner recommended by sealant manufacturer for the particular joint sealant.

2.04 Joint Primer/Sealer

A. Provide type of joint primer/sealer recommended by sealant manufacturer for the particular joint sealants and substrates.

2.05 Bond Breaker Tape

A. Polyethylene tape or other plastic tape, as recommended by sealant manufacturer, to be applied to sealant contact surfaces where bond to substrate or joint filler must be avoided for performance of sealant. Provide self-adhesive tape where applicable.

2.06 Sealant Backer Rod

A. Compressible closed-cell rod stock of polyethylene foam, polyethylene jacketed polyurethane foam, butyl rubber foam, neoprene foam or other flexible, permanent durable non-absorptive material recommended by sealant manufacturer. Provide size and shape of rod which will control joint depth for sealant placement, break bond of sealant and form optimum shape of sealant bead on back side, and provide a highly compressible backer to minimize sealant extrusion when joint is compressed.

PART 3 EXECUTION

3.01 Installation, General

A. Provide sealing and caulking to produce weathertight conditions throughout. Caulk around all exterior and interior masonry openings; seal construction joints as shown, and caulk elsewhere as noted or required to exclude water from between adjacent materials and provide finished appearance. Joints shall be caulked before painting adjacent work.

B. Examine joint surfaces, backing and anchorage of units forming sealant rabbet, and conditions under which sealant work is to be performed; notify of conditions detrimental to proper and timely completion of work and performance of sealants. Do not proceed until unsatisfactory conditions are corrected.

3.02 Weather and Site Conditions

A. Do not proceed with installation of sealants when wind-borne dirt or adverse weather conditions are anticipated, nor when temperatures are outside manufacturer's recommended limitations. Proceed only when conditions are favorable for proper cure and development of bond strength. Wherever joint width is affected by ambient temperature variations, install elastomeric sealants only when temperatures are in the lower third of manufacturer's recommended installation temperature range, so that sealant will not be subjected to excessive elongation and bond stress at subsequent low temperatures.

3.03 Joint Surface Preparation

A. Clean joint surfaces immediately before installation of sealant or caulking compound. Remove dirt, insecure coatings, moisture and other substances which would interfere with bond of sealant or caulking compound.

B. Masonry and wood shall be sound and dry. Cure concrete a minimum of 28 days. Etch concrete and masonry joint surfaces to remove excess alkalinity, unless sealant manufacturer's printed instructions indicate that alkalinity does not interfere with sealant bond and performance. Etch with 5% solution of muriatic acid; neutralize with dilute ammonia solution, rinse thoroughly with water and allow to dry before sealant installation.

3.04 Installation

A. Comply with sealant manufacturer's instructions except where more stringent requirements are shown or specified. Prime or seal joint surfaces as recommended by sealant manufacturer. Do not allow primer/sealer to spill or migrate onto adjoining surfaces.

B. Install sealant backer rod for liquid elastomeric sealants, except where shown to be omitted or as recommended by sealant manufacturer.

C. Employ only proven installation techniques, which will ensure that sealants will be deposited in uniform, continuous ribbons without gaps or air pockets, with complete "wetting" of the joint bond surfaces equally on opposite sides. Except as otherwise indicated, fill sealant rabbet to a slightly concave surface, slightly below adjoining surfaces. Horizontal joints between a horizontal surface and a vertical surface shall be filled to form a slight cove, so that joint will not trap moisture and dirt.

D. Install sealants to depths as shown, or if not shown, as recommended by sealant manufacturer but within the following general limitations, measured at the center (thin) section of bead.

1. For normal moving joints sealed with elastomeric sealants, but not subject to traffic, fill joints to a depth equal to 50% of joint width, but neither more than 1/2" deep nor less than 1/4" deep.

2. For joints sealed with non-elastomeric sealants and caulking compounds, fill joints to a depth in the range of 75% to 125% of joint width.

3. For sidewalks, pavements, floor expansion joints and similar joints sealed with elastomeric sealants and subject to traffic and other abrasion and indentation exposures, fill joints to a depth equal to 75% of joint width, but neither more than 5/6" deep nor less than 3/8" deep.

E. Do not allow sealants or compounds to overflow or spill onto adjoining surfaces, or to migrate into the voids of adjoining surfaces including rough textures such as exposed aggregate panels. Use masking tape or other devices to prevent staining of adjoining surfaces, by either the primer/sealer or the sealant/caulking compound.

F. Remove excess and spillage of compounds promptly as the work progresses. Clean the adjoining surfaces by whatever means may be necessary to eliminate evidence of spillage, without damage to the adjoining surfaces or finishes.

3.05 Curing

A. Cure sealants and caulking compounds in compliance with manufacturer's instructions and recommendations to obtain high early bond strength, internal cohesive strength and surface durability.

B. Protect sealants and caulking compounds during curing and throughout construction period to prevent dirt pick-up, deterioration or damage (other than normal wear and weathering).

3.06 Post Construction Inspection

A. Coordinate with the owner to return to the project within 12 months after substantial completion of this work to inspect for and replace any failed or failing joint sealants. Provide report of inspection results and repairs made.

DIVISION 8 - DOORS and WINDOWS

081113 Hollow Metal Doors and Frames

PART 1 GENERAL

1.01 Summary

A. Provide steel doors and frames as shown and as specified. Comply with applicable provisions of General Requirements.

1.02 Submittals

A. Submit shop drawings in accordance to Division 1 indicating location, elevation of door, frame type (wall thickness and corners), materials, methods of assembling, requirements for hardware, joints, and connections.

1.03 Quality Assurance

A. Provide doors and frames complying with Steel Door Institute "Recommended Specifications for Standard Steel Doors and Frames" ANSI/SDI-100 and as herein specified.

B. Comply with BHMA requirements and HMMA guide specifications.

C. Wherever fire-resistance classification (hour rating or classification) is shown or scheduled, provide fire-rated steel doors and frames that are tested, listed, and labeled by Underwriters Laboratories, Inc. (UL). Identify each fire door and frame with UL labels indicating applicable fire rating of both door and frame.

PART 2 PRODUCTS

2.01 Doors

A. Interior steel doors shall be 1-3/4" thick, constructed of commercial quality cold rolled full pickled, sheet steel face panels of thickness as scheduled on drawings (min. 16 ga.) or as otherwise required for fire rating, spot welded to 20 ga. internal stiffeners. Fill inner core with manufacturer's standard core material. Top and bottom of doors shall have continuous steel channel welded to face plates. Provide min. 14 ga. steel reinforcement for locks and surface applied hardware, and 3/16" thick reinforcement for mortise hinges, with factory drilling and tapping for hardware per BHMA and HMMA. Joints and seams shall be continuously welded and ground smooth. Provide rigid vinyl top cap. Latch/lock edge shall be beveled.

B. Exterior doors shall be similar to interior doors with full thickness polystyrene insulated core, and integral seal, inverted channel or suitable shapes welded to face sheets at top and bottom edges to completely seal doors from weather, with door tops closed flush.

C. Clearance for doors, except fire doors, shall be 1/8" at jambs and heads, 1/4" at meeting stiles of doors, 3/4" between bottom of doors and finished floor and 3/8" between bottom of door and top of threshold unless indicated otherwise. Verify clearance requirements for floor coverings. Provide clearance for fire doors as required by Underwriters' Laboratories.

D. Provide 1 ¾" by 12 gauge overlapping full height astragal welded on active leaf at pairs of exterior doors.

2.02 Welded Steel Frames

A. Provide welded steel frames for doors conforming to size and shape as shown.

B. Fabricate frames of prime quality cold rolled steel, thickness as scheduled on drawings, (14 ga. minimum) or as otherwise required of for fire rating. Provide standard configuration and profiles for scheduled face widths and depths unless noted otherwise.

C. Frame joints shall be mitered or butted and continuously arc-welded for full depth and width of frame, with welds on exposed surfaces dressed smooth and flush.

D. Frames shall be provided with removable spreaders securely fastened to bottom of jambs, 3/16" thick steel reinforcement for mortise hardware, and 12 ga. steel reinforcement prepared at factory for surface-applied hardware. Frame shall be punched for silencers and for hardware from templates furnished by hardware supplier. Cut-outs shall be protected with dust covers and mortar boxes.

E. Provide closed or tubular mullions, butt welded to head frames.

F. Reinforce joints between members with concealed clip angles of same thickness as frame.

G. Each jamb shall be provided with 14 ga. steel angle floor clips punched with 5/16" holes. Frames in masonry walls shall be provided with three jamb anchors per jamb up to 84" high, four per jamb over 84" high of type suitable for conditions. In masonry walls where masonry can be built up around frame, utilize adjustable type corrugated strap anchors; otherwise, provide bolt-through anchorage consisting of prepunched countersunk bolt holes in face of stop, frame sleeve and backplate and 5/16" expansion bolts with flat Philips head. Provide hot-dipped galvanized anchors at masonry.

H. Custom fit special application frames if/as shown on drawings.

2.03 Stops

A. Doors and frames receiving fixed glass, or air transfer grilles, shall be equipped with plain rectangular steel stops and trim as required. Screws shall be countersunk, flat Philips head type.

B. Unless specifically shown otherwise, frames shall be designed with loose stops on interior or room side of frame.

2.04 Door Louvers

A. Provide door louvers (grilles) of size as indicated; see architectural and mechanical drawings and schedules.

B. Louvers shall be 60 deg. chevron sight-tight cold rolled steel, 20 ga. frame and blades in prime finish, flush face frame both sides of door and adjustable with a nominal 1-1/8" louver depth.

2.05 Fabrication

A. Manufacturer shall provide cut-outs as required, closed with channel or plate, and reinforced as required. Confirm hardware requirements before fabrication and make adjustments required to accommodate hardware specified.

B. Frames shall be mortised and reinforced for hardware. Mortised hardware reinforcements shall be factory-drilled and tapped. Surface applied hardware may be field drilled. Reinforce all frames and doors on both sides so door closers or holders can be applied to either side.

2.06 Finish

A. Clean steel doors and frames of rust, dirt, grease, oil and foreign substances. Apply and bake-on 1 coat of rust inhibitive primer. Fill irregularities and apply an additional coat of manufacturer's standard primer, baked on. Apply finish paint in accordance to Section 099100.

PART 3 EXECUTION

3.01 Installation, General

A. Install frames and doors in accordance to shop drawings, manufacturer's recommendations, U.L. label requirements and as specified herein. Hardware shall be installed under Section 087100.

3.02 Frames

A. Erect hollow metal frames in a straight, plumb, true and secure manner. Provide bracing to hold frames in proper place until built into structure or partition where shown. No less than 3 anchors shall be installed at each jamb of each frame for securing frame to wall construction.

B. Coordinate special application frame requirements with other trades for proper fit-up, custom-fit joints and field connections. Special field joints shall be carefully prepared and installed for a tight fit.

C. Where frame width exceeds 6'-6" in width, provide secure anchorage at mid-point of head.

D. Type of anchorage items shall be determined by wall and head construction and as recommended by frame manufacturer. Anchor each jamb and mullion to floor through standard or special attached clip angles, using 1/4" expansion bolt or 1/4" power driven stud. Do not remove angle spreaders until entire installation is complete.

E. Fully grout all frames installed in masonry wall construction.

3.03 Doors

A. Install doors with equal width spaces on each side, to fit snugly without binding. After doors are fitted, remove them to allow painter to finish tops and bottoms as well as faces and edges. Rehang doors in proper manner.

3.04 Adjust and Clean

- A. Touch-up prime coats immediately after erection.
- B. Remove protective films, from prefinished doors just prior to final inspection.
- C. Check and readjust operation.
- D. Clean premises of litter, dirt and debris created by the work of this section.

084113 Aluminum Entrances, Windows and Glazing

PART 1 GENERAL

1.01 Summary

A. Relocate, rework, modify and provide new aluminum entrances and windows as shown and as specified. Comply with applicable provisions of General Requirements.

1.02 Submittals

A. Shop Drawings and Product Data: Submit shop drawings for fabrication and installation of new aluminum doors, frames, windows, glass, operators, hardware, and appurtenances. Include wall elevations at 1/2" scale, and half-size detail sections of every typical composite member. Show anchors, joint system, expansion provisions, and other components not included in manufacturer's standard data. Include product data on hardware and glazing details.

B. Samples: Submit sample of specified color of finish coating. Submit samples of each glass type and color alternates as specified.

C. Test Reports: Submit certified laboratory test results for quality assurance requirements below.

D. Delegated Design Submittals: Analysis data signed and sealed by the qualified professional engineer for framing system and for glass to confirm compliance with performance requirements.

E. Qualification Data: For manufacturing of insulating glass and tinted transom glass units.

F. Product certifications: From glass manufacturer.

G. Warranty: Submit two copies of written warranties as specified herein.

H. Make submittals in accordance to Division 1.

1.03 Quality Assurance - Entrances

A. Comply with the requirements and recommendations in applicable specifications and standards by NAAMM, AAMA and AA, including terminology definitions, and specifically including the "Entrance Manual" by NAAMM, except to extent more stringent requirements are indicated.

B. Fabricate exterior door and frame units, including weatherstripping and thresholds (if any), to prevent uncontrolled penetration of air and water under normal severe weather conditions.

C. Uncontrolled penetration of water is defined as interior accumulation in any one hour of more than 0.01 gal. of water per lin. ft. of operable door perimeter, during heavy rain (1 gal/s.f./hr.) with wind velocity of 25 mph.

D. Uncontrolled penetration of air is defined as infiltration of air at a rate in excess of 0.5 cu. ft. of air per minute per lin. ft. of operable door perimeter, during direct exposure to wind velocity of 25 mph.

1.04 Quality Assurance - Windows

A. All windows must meet or exceed the minimum requirements of performance class HC for the design load specified below in accordance to ANSI/AAMA 101.

B. Design load shall be 40 psf. Air infiltration shall not exceed 0.37 cfm/ft. for ventilators. Water resistance shall be tested at a static air pressure difference of 10 psf. Uniform load deflection test shall be conducted at a static air pressure difference of $40\pm$ psf. Uniform load structural test shall be conducted at a static air pressure difference of $60\pm$ psf. Condensation resistance factor (CRF) shall not be less than 56. Conductive thermal transmittance (U-value) shall not be more than 0.56.

1.05 Quality Assurance - Glass

A. Use a qualified insulating-glass manufacturer approved by coated glass manufacturer.

B. Use a qualified glass laminator approved by the tinted interlayer manufacturer.

C. Obtain products from a single source and manufacturer.

D. Comply with GANA publications for laminated glass and IGMA publication for insulating glass.

E. Permanently mark safety glazing and insulating glass units with appropriate certification labels.

1.06 Manufacturer's Warranty

A. Provide written warranty signed by Manufacturer, agreeing to replace aluminum doors, frames, and windows which are defective in materials or workmanship within 3 years of date of Substantial Completion. Defective materials or workmanship shall include (but not be limited to) failures in operation of doors and hardware, excessive leakage or air infiltration, excessive deflections, delamination of panels, deterioration of finish or metal in excess of normal use, and defects in accessories and components.

B. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

C. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: 10 years from date of Substantial Completion.

D. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 Curtain Wall Systems

A. Thermally-broken aluminum entrance, curtain wall, and window framing systems to match existing.

Subject to compliance with requirements and intent to match existing aluminum frame systems, provide Kawneer Trifab VG45IT, center pane, 2" sightline, 4 1/2" depth, thermal break framing system and 360 series, medium stile Insul-clad thermal entrances, or approved comparable products by Tubelite, United States Aluminum or Vistawall Architectural Products.

B. Design aluminum-framed systems, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated, including structural design criteria indicated on drawings.

2.02 Finish

A. All aluminum work shall receive an anodized finish. Color shall match existing.

2.03 Glass

A. Performance requirements:

1. Installed glazing systems shall withstand normal thermal movement, and design wind loads without failure, including loss or glass breakage attributable to defective manufacture, fabrication or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

2. Delegated design: Design glass, including comprehensive engineering analysis according to ASTM E1300 and the governing building code, by a qualified professional engineer using design criteria established on the structural drawings and determining design processes applicable to the project according to ASCE/SEI 7.
3. For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1-inch, whichever is less.
4. Design glass to resist thermal stresses induced by differential shading within individual glass lites.
5. Allow for thermal movements from 120°F ambient and 180°F surface temperature changes.

B. Materials

1. Where glass thickness is indicated, it is a minimum. Provide glass in thicknesses needed to comply with performance requirements.
2. Float glass: ASTM C1036, Type I, Quality-Q3, class I (clear); annealed, Kind HS heat-treated float-glass, or Kind FT heat-treated float glass as needed to comply with performance requirements.
3. Heat-strengthened float glass: ASTM C1048; type I; Quality -Q3, Class I; Kind HS heat-treated float-glass or Kind FT heat treated float-glass as needed to comply with performance requirements.
4. Fully-tempered glass: ASTM C1048; Kind FT heat-treated float glass.
5. Laminated glass: ASTM C1172, with polyvinyl butyral inter layer.
6. Insulating glass: ASTM E 2190, factory-assembled units of sealed lites of glass separated by dehydrated argon-filled interspace; with primary and secondary sealing system, stainless steel spaces and Low-E coating.

2.04 Glass Schedule

- A. Match existing glass applications at remodeled entrances and windows.
- B. Double pane applications: (exterior glazed doors and windows):
 1. Sealed, insulated units, double pane, stainless steel edge.
 2. Total unit thickness: 1 inch.
 3. Outer pane: laminated glass pane with clear interlayer, 1/4" minimum, overall thickness.
 4. Space: Argon

- 5. Inner pane: laminated glass pane with clear interlayer between heat-strengthened glass layers, 1/4" minimum overall thickness, with Low-E coating on #3 surface.
- 6. Provide clear glass unless otherwise noted on drawings or required to match existing.

B. Single pane applications: (interior glazed doors and windows, unless noted otherwise):

- 1. Single pane: laminated glass pane with clear interlayer, 1/2" minimum overall thickness.
- 2. Provide clear glass unless otherwise noted on drawings or required to match existing.

PART 3 EXECUTION

3.01 Installation

- A. Field verify all dimensions and conditions before ordering or fabricating window units.
- B. Coordinate preparation and installation of frames to accommodate concealed wiring or devices.
- C. Install doors, frames, windows, and hardware in accordance to shop drawings and manufacturer's recommendations.
- D. Set units plumb, level and true to line, without warp or rack of frames, doors or panels. Anchor securely in place. Separate aluminum and other corrodible metal surfaces from sources of corrosion or electrolytic action at points of contact with dissimilar metals.
- E. Set sill, threshold, and other members in a bed of sealant compound or with joint fillers or gaskets.
- F. Clean aluminum surfaces promptly after installation of frames and doors, exercising care to avoid damage of protective coating (if any). Remove excess glazing and sealant compounds, dirt and other substances.
- G. Where protective coating has been damaged, remove coating completely as soon as completion of construction activities no longer requires its retention.

3.02 Protection

- A. Protect doors, frames, and windows from damage or deterioration (other than normal weathering) until Substantial Completion.

087100 Door Hardware

PART 1 GENERAL

1.01 Summary

A. Provide finish hardware work as shown and as specified. Comply with applicable provisions of General Requirements.

B. The extent of finish hardware is shown on drawings and specified herein. Finish hardware is defined to include all items known commercially as builders' hardware which is required for doors, except special types of hardware specified in same section as door and frame. Examine drawings and other sections of specifications for related work.

1.02 Submittals

A. Submit 3 copies of manufacturer's product data for each item of finish hardware. Include information to show compliance with specified requirements.

B. Submit 4 copies of final hardware schedule. Final hardware schedule shall be based on finish hardware requirements as indicated. Coordinate hardware with doors, frames, and related work to ensure proper size, thickness, swing, function, and finish of hardware. Organize hardware schedule into "hardware sets", indicating complete designation of every item required for each door or opening. Submit schedule at earliest possible date, in order to facilitate fabrication of other work (such as hollow metal frames).

C. Submit 4 copies of separate key schedule showing how Owner's instructions on keying of locks has been fulfilled.

D. Furnish hardware templates to each fabricator of doors, frames and other work to be factory-prepared for installation of hardware. Upon request, check shop drawings of such other work, to confirm that adequate provisions are made for proper installation of hardware.

E. Prepare hardware schedules for coordination of the work. Review and acceptance by ENGINEER does not relieve Contractor of its exclusive responsibility to fulfill requirements as shown and as specified.

1.04 Product Handling

A. Tag each item or package separately, with identification related to final hardware schedule, and include basic installation instructions in package. Deliver individually packaged hardware items at proper times and locations (shop or field) for installation.

B. Provide secure lockup for hardware delivered to project, but not yet installed. Control handling and installation of hardware items which are not immediately replaceable, so that completion of work will not be delayed by hardware losses.

1.05 Guarantee

A. Closers, overhead holders, and locksets shall be guaranteed for a period of 2 years from date of substantial completion. Other items shall have standard 1 year guarantee.

PART 2 PRODUCTS

2.01 Acceptable Manufacturers

A. Products identified in this Section by reference to a specific manufacturer and product name/number are identified for the purpose of establishing a standard of quality, type, and function. Unless otherwise indicated, products of the following manufacturers, or equal, may be substituted for those listed, provided the substitution is equal in quality, type, and function and meets the specified requirements, subject to approval by the A/E:

Butts and Hinges: Stanley, Hager, McKinney.

Closers: Corbin Russwin, LCN, Norton, Sargent.

Locksets, Dead Locks: Corbin Russwin, Schlage, Sargent.

Push Plates and Pulls: Hiawatha, Quality, Ives, Burns, Rockwood.

Thresholds and Weatherstripping: Zero, Reese, Pemko, National Guard.

Exit Devices: Corbin Russwin, Von Duprin, Sargent, Precision, Monarch.

Kickplates, Armor Plates: Hiawatha, Quality, Ives, Burns, Rockwood.

Door Operator: LCN, Stanley, DORMA, Sargent, Besam

2.02 Base Metals

A. Produce hardware units of basic metal indicated, using manufacturer's standard metal alloy, composition, temper and hardness.

2.03 Forming

A. Form base metal into required shapes and sizes by manufacturer's standard production method for class or quality of hardware units required.

2.04 Fasteners

A. Manufacture hardware to conform to published templates, generally prepared for machine screw installation. Do not provide hardware which has been prepared for self-tapping sheet metal screws, except as specifically indicated.

B. Furnish screws for installation with each hardware item. Provide Phillips flathead screws, except as otherwise indicated. Finish exposed screws to match hardware finish.

C. Provide concealed fasteners for hardware units which are exposed when door is closed. Do not use through bolts for installation where bolt head or nut on opposite face is exposed under any condition.

D. Provide fasteners which are compatible with both unit fastened and substrate, and which will not cause corrosion or deterioration of hardware, base material or fastener.

2.05 Finishes

A. Match finish of hardware units at each door or opening to greatest extent possible. In general, match finish of latch and lockset (or push-pull units if no latch-lock sets) for color and texture.

B. Designations used in schedules and elsewhere to indicate hardware finishes are those of ANSI/BHMA A156.18 "Materials and Finishes" and traditional U.S. finishes used by certain manufacturers.

2.06 Keying

A. Hardware supplier shall meet with Owner to develop a keying schedule. Key locks in accordance to Owner's instructions. Provide 2 keys with each lock and furnish 6 master keys.

2.07 Standards

A. Hardware shall meet appropriate BHMA Grade 1 standards for heavy commercial applications.

B. All hardware shall comply with ADA ANSI A117.1, and the building code.

PART 3 EXECUTION

3.01 Hardware Mounting Heights

A. Mount hardware units at heights recommended in "Recommended Locations for Builders Hardware" by the Door and Hardware Institute, except as otherwise specifically indicated or required to comply with governing regulations.

B. Mount door closers on interior side of exterior doors and on non-public side of interior doors. Provide arm style accordingly.

3.02 Installation

A. Install hardware items in compliance with manufacturer's instructions and recommendations. Wherever cutting and fitting is required to install hardware onto or into surfaces which are later to be painted or finished, install each item completely and then remove and store in a secure place. After completion of finishes, reinstall each item.

B. Provide solid wood blocking behind wall stops, magnetic holders, and other hardware items mounted on adjacent studwall partitions.

C. Adjust and check each operating item of hardware and each door to ensure proper operation or function, initially, and after one week of normal operation frequency. Lubricate moving parts with type of lubrication recommended by manufacturer; use graphite-type if no other type is recommended. Replace units which cannot be adjusted and lubricated to operate freely and smoothly.

D. Instruct Owner's personnel in proper operation and maintenance of hardware and hardware finishes during final adjustment of hardware.

PART 4 SCHEDULES

4.01 Door Hardware Sets

SET 7 – Family Assisted Restroom

- A. Three ball bearing full mortise, stainless steel butt hinges, US32D
Provide reverse spring to auto open (Hager 1257)
- B. One passage latchset, ANSI F75, bored, US32D
Schlage, ND-Series; Athens design lever trim
- C. One latchset strike, US32D
- D. One auxiliary deadlock with “occupied” indicator, mortise, exterior cylinder, US32D

4.02 Hardware Schedule

Note: Repetition of BHMA references, manufacturer names and finish designation may have been omitted for convenience. Identical items of hardware shall be furnished by one manufacturer.

DIVISION 9 - FINISHES

092900 Gypsum Board Systems

PART 1 GENERAL

1.01 Summary

A. Provide gypsum board systems as shown and as specified. Comply with applicable provisions of General Requirements.

1.02 Submittals

A. Submit product data on joint treatment materials, gypsum board primer, and texture finish products.

B. Submit min. 6" x 6" gypsum board sample with each type of spray texture required.

1.03 Fire-Resistant Ratings

A. Comply with fire-resistance ratings as shown and as required by governing authorities and codes. Provide materials, accessories, and application procedures which have been listed by UL or tested according to ASTM E119 for type of construction shown.

1.04 Delivery, Storage, and Handling

A. Schedule delivery to minimize storage periods at project site. Deliver materials in accordance to manufacturer's instructions; ship unopened containers or packages, fully identified with manufacturer's name, brand, type and grade. Store boards flat with uniform support. Protect from weather and damage as recommended by manufacturer.

PART 2 PRODUCTS

2.01 Acceptable Manufacturers - Gypsum Board

A. Products identified in this Section by reference to a specific manufacturer and product name/number are identified for the purpose of establishing a standard of quality, type, and function. Unless otherwise indicated, gypsum board products and accessories of the following manufacturers or equal may be substituted for those listed, provided the substitution is equal in quality, type, and function and meets the specified requirements:

Georgia-Pacific (G-P).
National Gypsum/Gold Bond Building Products Div.
U. S. Gypsum (USG).

2.02 Gypsum Board

A. Standard: 5/8" thick gypsum wallboard unless otherwise indicated or necessary to match adjacent existing thickness, complying with ASTM C36, with paper face surface suitable to receive decorated finish and long edges tapered to receive standard joint treatment, in lengths as required for minimum number of joints. Use where other types are not scheduled or specified or required for conditions.

B. Abuse-Resistant: High-impact abuse-resistant rated product complying with ASTM C36, manufactured to produce greater resistance to surface indentation and through-penetration than standard gypsum panels, with core type indicated, 5/8" thick unless noted otherwise or necessary to match adjacent existing thickness, with long edges tapered. Use in all public areas (Lobby, Entryways, and similar applications and as noted).

1. Acceptable products include:
 - a. National Gypsum Company: Gold Bond Hi-Abuse Wallboard
 - b. United States Gypsum Co.: Sheetrock Brand Abuse-Resistant Gypsum Panels
 - c. Approved Equal

2.03 Gypsum Board - Mold and Mildew Resistant (GBMR)

A. 5/8" gypsum wallboard with moisture and mold resistant core and surfaces, long edges tapered to receive standard joint treatment. Use in ceilings of toilet rooms and plumbing chases and elsewhere as noted.

2.04 Cement Board (GBC)

A. 5/8" cementitious backer units complying with ANSI A118.9 or ASTM C1325, in maximum lengths to minimize end-to-end butt joints. Use at framed walls of toilet rooms to receive tile.

2.05 Gypsum Board - Fire Rated (GBX)

A. Gypsum wallboard, ASTM C36, Type "X", 5/8" thick, unless otherwise indicated, with paper face surface suitable to receive decorated finish and long edges tapered to receive manufacturer's standard joint treatment, unless otherwise shown. Use at fire-rated walls and ceilings.

2.06 Gypsum Board Fasteners

A. Provide type and size recommended by manufacturer for applications shown. Review fire-rated assembly requirements for fastener spacing. In general, fasten gypsum board with self-drilling screws designed for gypsum board, ASTM C1002.

B. Screws shall be self-tapping when used with metal framing up to 12 gage. Heads shall be designed for covering with finishing compound if exposed in face layers.

2.07 Gypsum Board Metal Trim Accessories

A. Provide trim accessories of sizes required for applications shown, fabricated of galvanized steel, complying with ASTM C1047 as follows:

B. External Corners: Metal corner bead with smooth rigid nose and perforated and knurled metal flanges.

C. Control Joints: Where shown and as required in Part 3 Execution, one-piece joint assembly of non-corrosive metal or extruded vinyl with continuous unperforated V-slot for insertion into joint and perforated flanges for attachment to face of gypsum board with slot opening covered with removable strip.

D. Where face panels abut dissimilar materials, at reveals, and where designated: Shaped metal trim designed to be concealed by taping operations; USG No. 200-B metal trim, Fry Reglet FDM-625, or approved equal.

E. Exposed panel edges and where designated: J-shape casing beads designed to be concealed by taping.

2.08 Joint Treatment Materials

A. Joint Tape: Plain or perforated paper, ASTM C475.

B. Joint Compound: Factory-prepackaged vinyl based products, ASTM C475. Provide in dry powder form for mixing with water at jobsite or factory pre-mixed, for single or two-compound treatment.

1. Taping compound shall be formulated for embedding tape and first coat over fasteners and flanges of corner beads and edge trim.
2. Topping compounds shall be formulated for fill (second) and finish (third) coats.
3. All purpose compounds shall be formulated for use as both taping and topping compounds.

2.09 Gypsum Board Primer

A. USG "Sheetrock First Coat", Gold Bond "Drywall Primer", or equal. Paint primers, as specified in Section 09900 Painting, will not be accepted as equal to this product.

2.10 Interior Texture Finish

A. Exposed surfaces shall receive a smooth, aggregated, fine texture finish unless noted otherwise, or required to match adjacent surface textures.

2.11 Metal Studs

A. Cold formed galvanized steel.

1. Screw type with knurled flanges
2. Sizes as indicated. Minimum 20 gauge for cement board applications, minimum 25 gauge elsewhere.
3. Provide top and bottom tracks, bridging, bracing as required and recommended by manufacturer.

PART 3 EXECUTION

3.01 Installation of Steel Framing, General

- A. Install steel framing as shown and to comply with ASTM C754 and with ASTM C840 requirements that apply to framing installation.
- B. Install supplementary framing, blocking and bracing at terminations in the work and for support of fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, and similar construction to comply with details indicated and with recommendations of gypsum board manufacturer. Coordinate with Section 06100.
- C. Isolate non-load bearing steel framing from building structure to prevent transfer of loading imposed by structural movement.
 - 1. Where partition and wall framing abuts overhead structure.
 - 2. Where edges of suspended ceilings abut building structure horizontally at ceiling perimeters or penetration of structural elements.
- D. Do not bridge building expansion and control joints with steel framing or furring members; independently frame both sides of joints with framing or furring members or as indicated.
- E. Install gypsum board ceiling suspension system per ASTM C636, CISCA, manufacturer's recommendations and associated ICBO evaluation reports.

3.02 Installation of Gypsum Board

- A. Comply with ASTM C840, unless otherwise recommended by gypsum board manufacturer.
- B. Examine substrates and conditions; notify of detrimental conditions. Do not proceed until unsatisfactory conditions are corrected.
- C. Do not exceed 1/8" in 8'-0" variation from plumb or level in line or surface; except at joints between units, do not exceed 1/16" variation between planes of abutting edges or ends. Shim as required to comply with specified tolerances.
- D. Provide additional framing and blocking as required to support gypsum board at openings and cutouts, and to support built-in anchorage and attachment devices for other work.
- E. Form control joints in gypsum board construction where indicated below. Allow 1/2" continuous opening between edges of adjacent drywall boards to allow for insertion of control joint trim accessory.
- F. Finish exposed surfaces with joints, corners and exposed edges reinforced and trimmed, with all joints, fastener heads, trim accessories, flanges and surface defects filled with joint compound for a smooth flush surface.
- G. Provide metal casing bead "J" trim around openings and terminations. Provide corner bead at all outside corners.

H. Partition/Walls: For heights of 8'-1" or less, apply gypsum board vertically or horizontally at contractor's option. For heights greater than 8'-1" or for areas less than 4' wide, apply vertically. Use floor-to-ceiling length boards for vertical applications and locate edge joints over supports, but offset at least one stud on opposite faces of partition/walls. Use maximum practical length boards for horizontal applications and locate end joints over supports and stagger in alternate courses of board.

I. Ceilings: Apply gypsum board with long dimension at right angles to supports with end butt joints located over supports. Use maximum practical length boards to minimize end butt joints. Stagger end joints in alternate courses of boards and locate as far away from center of ceiling as possible.

J. Multiple layers: follow requirements of rated assemblies.

3.04 Control Joints

A. Gypsum panel surfaces shall be isolated with control joints where:

1. Partition, furring, or column fireproofing abuts a structural element (excepts floor) or dissimilar wall or ceiling.
2. Ceiling abuts a structural element, dissimilar wall or partition, or other vertical penetration.
3. Construction changes within plane of partition or ceiling.
4. Partition or furring run exceeds 30 ft.
5. Ceiling dimensions exceed 50 ft. in either direction with perimeter relief, 30 ft. without relief.
6. Exterior soffits exceed 30 ft. in either direction.
7. Wings of "L", "U" and "T"-shaped ceiling areas are joined.
8. Expansion or control joints occur in base exterior wall.
9. Junctions between suspended gypsum board ceilings and gypsum board ceilings mounted directly to building framing.
10. Elsewhere as noted.

B. Ceiling height door frames may be used as control joints. Less-than-ceiling height frames shall have control joints extending to ceiling from both corners unless otherwise approved by A/E.

3.05 Gypsum Board Finishing

A. Do not install joint treatment compounds unless conditions comply with minimum temperature and ventilation requirements recommended by manufacturer. Finish exposed gypsum board surfaces with joints, corners, and exposed edges reinforced or trimmed as specified, and with joints, fasteners, accessory flanges, and surface defects filled with joint compound in accordance to manufacturer's recommendations for a smooth, flush surface. Gypsum board finishing work will not be considered acceptable if corners or edges do not form true, level, or plumb lines, or if joints, fastener heads, flanges of accessories, or defects are visible after application.

3.06 Gypsum Board Primer

A. Apply full coverage coat of gypsum board primer to all painted walls and ceilings in accordance to manufacturer's instructions. For both smooth surface finished and textured walls and ceilings, gypsum board primer shall be applied to equalize porosity and surface texture differences between finished joint compound and gypsum board face paper. Apply primer evenly, free of runs, sags and other blemishes.

B. This contractor shall be responsible for providing additional sanding as required after gypsum board primer has dried. This additional sanding is required to eliminate any surface texture differences that may have been caused by oversanding joint compound areas and raising nap on gypsum board paper facings. This contractor shall be solely responsible to provide a uniform texture surface on all gypsum surfaces ready for application of paint primer by painting contractor.

3.07 Texture Application

A. Apply texture according to manufacturer's instructions and in accordance to approved sample. Apply material to blend uniformly without starved spots or detectable application pattern.

B. Protect surrounding surfaces from splattering or overspray.

3.08 Protection

A. Comply with proper procedures for protection of completed gypsum board work from damage or deterioration until acceptance of work.

093001 Ceramic Wall Tiling

PART 1 GENERAL

1.01 Summary

A. Provide ceramic wall tile as shown and as specified. Comply with applicable provisions of General Requirements.

1.02 Related Sections

- A. Ceramic Floor Tiling -093002
- B. Joint Sealants - 079200

1.03 Submittals

A. Submit product data and installation instructions. Include certifications and other data to show compliance with these specifications.

B. Submit full size sample of each type, class, and color of tile and trim. Samples will be reviewed for color, pattern and texture only; compliance with all other requirements is Contractor's responsibility.

C. Submit color samples of grout.

1.04 Quality Assurance

A. Provide tile certified by Tile Council of America (TCA) to meet or exceed ANSI A137.1, "Standard Grade". Comply with TCA specifications for installation of ceramic tile system.

B. Provide materials obtained from one source and same production run for each type and color of materials.

C. Build mockups to verify selections, demonstrate aesthetics and set quality for materials and execution.

D. Conduct pre-installation conference with all related trades at project site prior to commencement of their work on site to coordinate jointing of substrates and other requirements.

1.05 Delivery and Storage

A. Deliver materials and store on site in original containers with seals and labels intact until used.

B. Store tile and cementitious materials elevated, under cover and dry. Keep liquids from freezing.

1.06 Extra Materials

A. Supply an extra 3% of total quantity of each tile and trim from same production run as installed tile. Place in clean marked cartons for Owner's use.

PART 2 PRODUCTS

2.01 Ceramic Wall Tile

- A. Tile shall match wall tile in existing toilet rooms.
- B. Tile shall be 1/4" thick porcelain tile with a glazed finish laid to match existing wall tile. Provide tile with an impervious body with less than 0.5% water absorption and a waffle type backing. Furnish trim in size and color to match tile, and as follows:

1. Inside corners - square.
2. Outside corners - bullnose.
3. Jambs-bullnose where tile projects from jamb.

2.02 Setting Materials

- A. Wall setting latex/polymer modified Portland cement mortar: Comply with ANSI A108.5, TCA method W202-07.

2.03 Grouting Materials

- A. Commercial, unsanded, latex/polymer modified Portland cement grout, wet or dry-cure formulation as appropriate, color to match existing. Comply with ANSI A118.7.

2.04 Sealants

- A. For control joints in walls, use a urethane sealant per Section 079200.

2.05 Protective Materials

- A. Grout Release: Proprietary liquid coating formulated to protect face of tile against grout staining, as recommended by tile manufacturer.
- B. Neutral cleaner such as American Olean General Purpose Cleaner, Hillyard Super Shine-All or equal, subject to tile manufacturer's approval.
- C. Heavy duty non-staining breathable construction paper with compatible masking tape.

PART 3 EXECUTION

3.01 Examination of Surfaces

- A. Inspect substrates for condition and maximum variations shown below:

Walls

Dry-Set Mortar

1/8" in 8'

- B. Report unacceptable surfaces. Surfaces to be tiled shall be free from coatings, curing membranes, oil, grease, wax, and dust. Do not proceed until unsatisfactory conditions are corrected.

3.02 Layout

- A. Determine location of movement joints. Lay out tile work to minimize cuts less than one-half tile in size. Locate cuts to be least conspicuous. Extend tile wainscots to next full tile beyond dimensions shown.
- B. Align wall joints to give straight uniform grout lines, plumb and level. Make joints between tile sheets same width as joints within sheets so extent of each sheet is not apparent in finished work.

3.03 Tile Installation, General

- A. Use products in strict accordance with manufacturer recommendations. Proportion mixes in accordance to applicable ANSI 108-series standards.
- B. Extend tile work into recesses and under equipment and fixtures, to form a complete covering without interruptions, except as otherwise shown. Terminate work neatly at obstructions, edges, and corners without disruption of pattern or joint alignments.
- C. Smooth exposed cut edges; clean cut edges before installing tiles. Fit tile carefully against trim and around pipes, electric boxes, and other built-in fixtures so that escutcheons, plates, and collars will completely overlap cut edges.
- D. When using glazed tile sheets, minimize tearing sheets apart by drilling pipe holes as much as possible.

3.04 Setting Methods

- A. Provide setting beds as shown or, when not indicated, use applicable TCA installation specifications for setting and grouting materials specified.

3.05 Grouting

- A. Apply grout release if/as recommended by tile manufacturer to prevent grout stains on tile face.
- B. Grout in accordance to manufacturer's recommendations.
- C. Follow manufacturer's recommendations for grout curing.

3.06 Cleaning

- A. Clean tile surfaces thoroughly after grouting. Remove grout film and any grout release agents, observing tile manufacturer's recommendations for chemical cleaners. Rinse tile work thoroughly with clean water before and after using chemical cleaners. Polish surface of tile work with soft cloth.

3.07 Protection

A. Protect tile work with heavy duty construction paper or other material to prevent damage. Prohibit construction traffic from using newly tiled areas.

B. Upon Substantial Completion, tile work shall be complete and free from defects. Repair damaged work to match adjacent surfaces.

093002 Ceramic Floor Tiling

PART 1 GENERAL

1.01 Summary

A. Provide ceramic floor tile as indicated and as specified. Comply with applicable provisions of General Requirements.

1.02 Related Sections

- A. Ceramic wall tile - 093001.
- B. Joint sealants - 079200

1.03 Submittals

- A. Submit product data and installation instructions in accordance to General Requirements. Include certifications and other data to show compliance with these specifications.
- B. Submit full size sample of each type, class, and color of tile and trim in accordance to Division 1. Samples will be reviewed for color, pattern and texture only; compliance with all other requirements is Contractor's responsibility.
- C. Submit color samples of grout for selection.

1.04 Quality Assurance

- A. Provide tile certified by Tile Council of America (TCA) to meet or exceed ANSI A137.1 "Standard Grade". Comply with TCA specifications for installation of ceramic tile system.
- B. Provide materials obtained from one source and same production run for each type and color of materials.
- C. Build mockups to verify selections, demonstrate aesthetics and set quality standards for materials and execution.
- D. Conduct pre-installation conference with all related trades at project site prior to commencement of their work on site to coordinate jointing layouts and other substrate requirements.

1.05 Delivery and Storage

- A. Deliver materials and store on site in original containers with seals and labels intact until used.
- B. Store tile and cementitious materials elevated, under cover and dry. Keep liquids from freezing.

1.06 Extra Materials

- A. Supply an extra 3% of total quantity of each tile and trim from same production run as installed tile. Place in clean marked cartons for Owner's use.

PART 2 PRODUCTS

2.01 General

A. Provide materials complying with ANSI A108.02, ANSI standards referenced by TCA installation methods specified, and other requirements specified.

2.02 Tile

A. Unglazed, untextured, unpolished, color-body porcelain ceramic tile, complying with ANSI A137.1 standard grade requirements.

1. Coefficient of friction: minimum 0.6 wet/0.7 dry (ASTM C1028)
2. Moisture absorption: < 0.5% (ASTM C373)
3. Breaking strength: > 400 lbs.
4. Surface hardness / durability rating: 8.5 MOH
5. Thickness: 1/4"
6. Sizes: 8"x 8"
7. Colors: As noted on drawings or selected by owner.

B. Acceptable products:

1. Basis of Design: DAL-TILE; colors as selected by owner.

C. Trim shapes as required for complete installation of tile, of same material, size, color and finish as floor tile. Use base cove throughout, square on radius top as required by conditions.

D. Factory blend tiles exhibiting color variations to provide same range in colors in each package.

2.03 Setting/Bonding Materials

A. TCA Method: "F111-07 Cement Mortar, Cleavage Membrane" Meet ANSI A108.18 for tile set on cured mortar bed with latex/polymer modified Portland cement bond coat.

B. Cleavage membrane: Asphalt felt. ASTM D226, Type 1 (No. 15); or polyethylene sheeting, ASTM D4397, 10.0 mils thick.

C. Reinforcing wire fabric: A galvanized weld wire fabric, 2 by 2 inches by 0.062 inch diameter; comply with ASTM A185 and ASTM A82 except for minimum wire size.

D. Mortar bed:

1. Portland cement: ASTM C150, type 1.
2. Hydrated lime: ASTM C206 or C207, type S
3. Sand: ASTM C144
4. Water: Clean, drinkable

E. Bond coat: Latex/polymer modified Portland cement mortar, as recommended by manufacturer for porcelain tile.

2.04 Grouting Materials

A. Latex/polymer modified Portland Cement Grout, ANSI A118.7

B. Color as selected by Owner.

2.05 Elastomeric Joint Sealant

A. Use sealants per Section 079200.

B. Provide primers, backer rods and other sealant accessories recommended by the sealant manufacturer.

C. Provide colors to match colors of grout in adjacent tile.

2.06 Miscellaneous Materials

A. Expansion joints: angle on L-shape, height to match tile and setting bed thickness, designed specifically for tile flooring applications; stainless steel ASTM A666, 300 series exposed edge material.

B. Grout release: Proprietary liquid coating, specifically formulated and recommended by manufacturer for providing temporary protection of tile face against grout staining during grouting.

C. Tile cleaner: Neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for the installed products by their manufacturers.

D. Grout sealer: High-quality penetrating / impregnating silicon-free sealer recommended by grout manufacturer to prevent moisture penetration and minimize staining of cementitious grout material, that does not change appearance or color grout.

PART 3 EXECUTION

3.01 Examination of Surfaces

A. Inspect substrates for condition and maximum variations shown below:

1. Maximum 1/4" in 10' from the required plane.
2. Slope provided in subfloor.
3. Steel trowel finish.

B. Report unacceptable surfaces. Surfaces to be tiled shall be free from coatings, curing membranes, oil, grease, wax, and dust. Do not proceed until unsatisfactory conditions are corrected.

3.02 Layout

- A. Joint width: 3/16"
- B. Determine location of movement joints in accordance to TCA recommendations, subject to approval by Architect/Engineer. Lay out tile work to minimize cuts less than one-half tile in size. Locate cuts in floors to be least conspicuous.
- C. Floor joints shall form straight uniform grout lines, parallel with walls.
- D. Provide metal edge strips at both edges of joints.

3.03 Tile Installation, General

- A. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved samples. If not factory blended, either return to manufacturer or blend tile at project site before installing.
- B. Use products in strict accordance with manufacturer recommendations. Proportion mixes in accordance to applicable ANSI 108-series standards.
- C. Pre-seal tile surfaces with a grout-release agent to prevent staining by grout and to ease grout cleanup, in accordance to tile manufacturer's recommendations. Test small area first. Take care not to coat edges of tile.
- D. Extend tile work into recesses and under equipment and fixtures, to form a complete covering without interruptions, except as otherwise shown. Terminate work neatly at obstructions, edges, and corners without disruption of pattern or joint alignments.
- E. Smooth exposed cut edges; clean cut edges before installing tiles. Fit tile carefully against trim and around pipes, electric boxes, and other built-in fixtures so that escutcheons, plates, and collars will completely overlap cut edges. Extend tile under metal door thresholds and frames.

3.04 Setting Methods

- A. Install setting beds and related materials in accordance to applicable TCA installation method specifications for setting and grouting materials specified.
- B. Follow TCA recommendations for bonding large format tile to ensure proper coverage of bonding surface and full support of edges and corners. Periodically remove and check a tile to assure proper coverage is being attained.

3.05 Grouting

- A. Grout in accordance to manufacturer's recommendations.
- B. Dampen grout joints daily with clean water by clean sponge or mop for first 7 days to facilitate grout cure and color lock.

3.06 Expansion Joint Installation

- A. Prepare substrate in accordance to TCA Handbook.
- B. Align expansion joints on floors and/or walls where indicated.
- C. Press joints into setting material and trowel over perforated flanges.
- D. Set tile over flange making sure top of joint is flush with tile.
- E. Install joint sealants in accordance to section 079200 and manufacturer's instructions.

3.07 Cleaning

- A. Clean tile surfaces thoroughly after grouting. Remove grout film and grout release agent, observing tile manufacturer's recommendations for chemical cleaners and methods. Rinse tile work thoroughly with clean water before and after using chemical cleaners. Polish surface of tile work with soft cloth.

3.08 Post Cure Sealers

- A. Apply grout sealer after curing period as recommended by manufacturer.
- B. Do not seal tile surfaces.

3.09 Protection

- A. Protect tile work with non-staining breathable, heavy duty construction paper to prevent damage immediately after tile has been properly installed and grouted. Do not use plastic or non-absorbent coverings. Maintain protection until floor is opened for intended use.
- B. Prohibit construction traffic from using newly tiled areas.
- C. Upon Substantial Completion, tile work shall be complete and free from defects. Repair damaged work to match adjacent surfaces.

099100 Painting

PART 1 GENERAL

1.01 Summary

A. Provide painting as shown and as specified. Comply with applicable provisions of General Requirements and Standard Specifications.

1.02 Work Included

A. Work includes painting and finishing items and surfaces of new construction; existing surfaces disturbed or exposed to accomplish the work; existing surfaces adjacent to new construction as needed to provide uniform appearance (texture, color, sheen); and other surfaces throughout the project as designated on Drawings, in Schedules, and in Specifications.

B. Paint all surfaces exposed to view whether or not colors are designated in "schedules", except where natural finish is obviously intended or specifically noted. Where items or surfaces are not specifically mentioned, finish to match adjacent similar materials or areas.

C. Work includes field painting of bare and covered pipes and ducts (including color coding and labeling when scheduled), hangers, exposed ferrous metal work, and primed and prefinished metal surfaces of equipment installed under mechanical and electrical work in finished areas only, except as otherwise specified.

D. Examine work of other trades and become thoroughly familiar with provisions regarding painting of their work. Paint or finish all exposed surfaces and equipment left unfinished by other provisions of these specifications.

1.03 Work Not Included

A. Shop Priming: Unless otherwise specified, shop primer coats are included under various sections for structural steel, miscellaneous metal, architectural woodwork, steel doors and frames, and shop-fabricated or factory-built mechanical and electrical equipment, accessories, and similar items.

B. Prefinished Items: Unless otherwise indicated, do not paint factory-finished or prefinished items, such as (but not limited to) metal toilet enclosures, acoustic materials, architectural woodwork and casework, light fixtures, and non-public utility area mechanical and electrical equipment.

C. Concealed Surfaces: Unless otherwise indicated, painting is not required on surfaces in concealed inaccessible areas such as foundation spaces, furred areas, utility tunnels, pipe spaces, duct shafts, and elevator shafts. Exception: field paint steel lintels in exterior walls and framing in exterior eaves before enclosing.

D. Finished Metal Surfaces: Metal surfaces of anodized aluminum, stainless steel, chromium plate, copper, bronze, and similar finished materials do not require finish painting, except as otherwise indicated.

E. Operating Parts: Do not paint moving parts of operating units, sliding and bearing surfaces, and mechanical and electrical parts, such as valve and damper operators, linkages, sensing devices, and motor and fan shafts, unless otherwise indicated.

F. Labels: Do not paint over code-required labels, such as Underwriter's Laboratories and Factory Mutual, or any equipment identification, performance rating, name, or nomenclature plates.

1.04 Definitions

A. "Paint" as used herein means all coating systems materials, including primers, emulsions, enamels, stains, sealers and fillers, and other applied materials whether used as prime, intermediate or finish coats.

B. SSPC - Steel Structures Painting Council.
ASTM - American Society for Testing and Materials.

1.05 Submittals

A. Product Data: Submit manufacturer's product data, including label analysis and application instructions for each material specified.

B. Color Charts: Furnish color charts of proposed products for selection/verification.

C. Samples: Upon request, submit samples for review of color, gloss and texture. Compliance with all other requirements is the exclusive responsibility of Contractor. Provide a listing of material and intended application for each sample.

1. On 12" x 12" hardboard, provide two samples of each color and material, with texture to simulate actual conditions. Resubmit each sample as requested until required sheen, color and texture is achieved.

2. On actual wood surfaces, provide two 4" x 8" samples of each natural and stained wood finish as required. Label and identify each as to location and application.

3. On concrete masonry, provide two 4" square samples of masonry for each type of finish and color, defining filler, prime and finish coats.

D. Submit samples and certifications to the Engineer. Do not apply paint systems until approved for use on the project.

1.06 Delivery, Storage and Protection

- A. Deliver materials in original, unopened packages and containers bearing labels as follows:

Name or title of material.

Fed. Spec. number, if applicable.

Manufacturer's stock number.

Manufacturer's name.

Contents by volume, for major pigment and vehicle constituents.

Thinning instructions.

Application instructions.

PART 2 PRODUCTS

2.01 Paint and Coatings

- A. Subject to compliance with the specified requirements, provide products by one of the following, or equal:

Pratt and Lambert Paints (P & L).

Sherwin-Williams Paints.

Glidden Paints.

Benjamin Moore Paints.

PPG Industries, Inc. (Pittsburg Paints).

- B. Contractor shall submit a specific list of products it wishes to use if manufactured by a company other than that noted in Painting Schedules.

- C. Refer to Drawings and Painting Schedules for finishes and coating systems to be applied to various surfaces throughout project.

- D. Contractor shall bear responsibility for compatibility of shop primers and field-applied finish coatings and for compatibility of primer recoat-window time with timing of field finishes. When shop primer and finish coats are products of different manufacturers, manufacturer of finish coats shall certify in writing to the compatibility of products, or shall recommend a suitable barrier or intermediate tie coat to be applied prior to finish coats. Otherwise, provide recommended undercoat paint produced by same manufacturer as finish coats. Use only thinners approved by paint manufacturer, and within recommended limits.

- E. Provide best quality grade of coatings as regularly manufactured by approved paint manufacturers. Materials not displaying manufacturer's identification as a standard, best-grade product will not be acceptable.

PART 3 EXECUTION

3.01 Substrate Examination

A. Examine substrates and surfaces and conditions under which work is to be performed. Notify in writing of any conditions detrimental to performance of this work. Do not proceed with this work until unsatisfactory conditions have been corrected; starting of painting work will be construed as acceptance of surface and conditions within any particular area.

B. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions otherwise detrimental to formation of a durable paint film.

3.02 Surface Preparation

A. Perform preparation procedures for each substrate in strict accordance with paint manufacturer's instructions and as specified.

B. Remove all hardware, hardware accessories, machined surfaces, plates, lighting fixtures, and similar items in place and not to be painted, or provide surface-applied protection prior to surface preparation and painting operations. Remove mounted accessories if necessary for complete painting of items or adjacent surfaces. Following completion of painting of each space or area, reinstall removed items using workmen skilled in trades involved.

C. Clean surfaces to be painted before applying paint or surface treatments. Remove oil and grease prior to cleaning. Program cleaning and painting so that contaminants from cleaning process will not fall onto wet, newly-painted surfaces.

D. Prepare cementitious surfaces of concrete, concrete block, cement plaster, and mineral-fiber-reinforced cement board to be painted by removing all efflorescence, chalk, dust, dirt, grease, oils and by roughening as required to remove glaze.

E. Clean wood surfaces to be painted of all dirt, oil, or other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sandpaper smooth those finished surfaces exposed to view. Scrape and clean small, dry, seasoned knots and apply a thin coat of white shellac or other approved sealer, before application of priming coat. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood-filler. Sandpaper smooth when dried. Wipe off adhering dust.

F. Clean nongalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with recommendations of SSPC, unless blast cleaning is indicated elsewhere.

G. Clean galvanized surfaces with nonpetroleum-based solvents so that the surface is free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

3.03 Material Preparation

- A. Prepare painting materials in accordance to manufacturer's directions. Mix materials before application to produce uniform density. Stir as required during application of materials. Do not stir surface film into material; remove film and, if necessary, strain material before using.
- B. Store materials not in actual use in tightly covered containers. Maintain containers used in storage, mixing and application of paint in a clean condition, free of foreign materials and residue.

3.04 Application

- A. Apply paint in accordance to manufacturer's directions. Use applicators and techniques best suited for type of material being applied.
- B. Apply additional coats when undercoats, stains or other conditions show through final coat of paint; paint film shall be of uniform finish, color and appearance.
- C. Paint surfaces behind movable equipment and furniture to match exposed surfaces. Paint surfaces behind permanently-fixed equipment or furniture with prime coat only. Paint back sides of access panels, and removable or hinged covers to match exposed surfaces.
- D. Paint interior surfaces of ducts, where visible through registers or grilles, with a flat, non-specular black paint.
- E. Finish exterior doors on tops, bottoms and side edges the same as exterior faces, unless otherwise shown.
- F. Sand lightly between each succeeding enamel or varnish coat.
- G. Omit first coat (primer) on metal surfaces which have been shop-primed and touch-up painted, unless otherwise specified.

3.05 Protection

- A. Protect work of other trades, whether to be painted or not, against damage by painting and finishing work. Correct any damages by cleaning, repairing or replacing, and repainting.
- B. Provide "Wet Paint" signs as required to protect newly-painted finishes. Remove temporary protective wrappings provided by others for protection of their work after completion of painting operations.

3.06 Clean-Up

- A. During progress of work, dispose of discarded paint materials, rubbish, cans and rags. Upon completion of painting work, clean all paint-spattered surfaces by proper methods of washing and scraping, using care not to scratch or otherwise damage finished surfaces.

PART 4 SCHEDULES

4.01 Painting Schedules, General

A. Provide the following coating systems for the various substrates indicated. Named products are specified to establish a standard of type and quality. See article "Paint and Coatings" for acceptable manufacturers. Provide coating systems for surfaces not listed here as recommended by manufacturer for substrates and exposure, subject to Engineer approval.

B. Contractor shall include in its bid the painting of different colors for adjacent surfaces such as doors, frames and walls. Colors shall be as noted on drawings and schedules, or as otherwise directed by Engineer.

4.02 Exterior Painting Schedule

Ferrous Metal - Primed and Prefinished, including miscellaneous metal fabrications, steel doors and frames, exposed structural lintels:

Basis of Design:

Touch up bare metal with Sherwin Williams Pro-Cryl Universal Acrylic Primer.

2 coats Sherwin Williams Pro Industrial Zero VOC

(For lintels: interior color to match adjacent wall; exterior color to match door frame).

4.03 Interior Painting Schedule

Block Masonry, where scheduled:

Basis of Design:

1 coat P & L Primafil 200.

2 coats P & L Cellu-Tone (alkyd-enamel, satin).

Gypsum Board, ceilings and walls:

Basis of Design:

1 coat P & L Wall Primer.

2 coats P & L Vitra Shield (stippled-alkyd, Eggshell).

Ferrous Metal - Adjacent or Near to Painted Surfaces, including factory-primed and baked-enamel-prefinished fire extinguisher cabinets, grilles, louvers, ductwork, conduit, piping, electrical panel covers, baseboard radiation, convector cabinets, access covers, equipment enclosures, raceways and similar appurtenances:

Paint to match adjacent or near surfaces, except as designated below.

Ferrous Metal - Primed and Prefinished, including steel doors, steel frames, miscellaneous steel fabrications, tube columns, steel tube trusses:

Basis of Design:
Touch up primer.
1 coat P & L Vitralite Undercoating (tinted).
1 coat P & L Vitralite Enamel (alkyd, eggshell).

Insulation Coverings:

Basis of Design:
1 coat P & L Vapex Wall Primer.
Finish coats to match adjacent or near surfaces.

Hardwood - Stained, including unfinished hardwood trim:

Basis of Design:
1 coat P & L Tonetic Wood Stain.
1 coat P & L Sanding Sealer.
2 coats P & L 38 Clear Finish (alkyd-natural/stain, satin).

Plywood - Painted, including exposed deck above ceilings, shelving and equipment backing:

Basis of Design:
1 coat P & L Interior Trim Primer.
2 coats P & L Cellu-Tone (alkyd-enamel, satin).

Wood - Painted

Basis of Design:
1 coat P & L Interior Trim Primer.
2 coats P & L Aqua-Satin (latex-enamel, satin).

DIVISION 10 - SPECIALTIES

101400 Interior Signs

PART 1 GENERAL

1.01 Summary

- A. Provide interior sign work as shown and as specified. Comply with applicable provisions of Division 1.
- B. Supply and install, complete in place, all signage as indicated on the drawings and specified herein.
 - 1. Provide handicap accessible signage at entry to new toilet rooms.
 - 2. Provide MEN and WOMEN signage at entry to new toilet rooms.
- C. Submit proposed sign configurations to ENGINEER for selection and approval.
- D. Provide temporary signage as directed by owner for temporary changes in MEN and WOMEN toilet rooms and for way-finding at entrances to accommodate phasing of the work.

1.02 Submittals

- A. Shop Drawings: Submit shop drawings, product data sheets, and schedules. Indicate type of sign, materials, dimensions, colors, graphics, and method of attachment.
- B. Color Charts: Submit chart of color combinations for selection by Engineer.
- C. Samples: Showing color, materials, graphics, sizes, and mounting hardware.

1.03 Regulatory Requirements

- A. Signs shall comply with the Americans with Disabilities Act (ADA) of 1990.
- B. Signs shall comply with state, local, and ANSI handicapped accessibility requirements.
- C. Use personnel thoroughly skilled and familiar with the manufacturer's recommended installation method.

1.04 Delivery, Storage and Handling

- A. Ship sign materials including attachment devices carefully packaged to prevent surface damage. Include shop drawings to ensure correct installation and arrangement of all materials.
- B. Remove all damaged and unsuitable materials from the jobsite immediately.
- C. Store adhesives at ambient room temperature.

PART 2 PRODUCTS

2.01 Manufacturers

A. Signage shall be Adapt as manufactured by Takeform Architectural Graphics, Vista Signage Systems, 2/90 Sign Systems, asi Sign Systems or approved equal.

2.02 Signs

A. Architectural Signage System

1. The signage system shall utilize decorative laminate face with frame and applied graphics including all tactile requirements in adherence to ADA specifications.

B. Materials

1. Sign face shall be made of .035 standard-grade, high pressure surface laminate.
2. The sign core/backer shall be thermo set composite polyester based resin, color impregnated of .25 thickness.
3. Tactile lettering shall be precision machined 1/32" thick, matte polycarbonate and subsurface colored for scratch resistance.

C. Typography

1. Type style: Helvetica medium of height indicated on drawing details. Copy shall be a true, clean, accurate reproduction of helvetica medium. Upper and lower case or all caps as indicated in Sign Type drawings. Letter spacing to be normal and interline spacing shall be set by manufacturer.
2. Arrows, symbols and logo art: to be provided in style, sizes, colors and spacing as shown in drawings.
3. Braille: Grade II perfectly round, clear Braille beads.

D. Colors and Finishes

1. Typography to be selected by A/E.
2. Message Background to be selected by A/E.
3. Finishes are to meet current Federal ADA and any state requirements.

E. Construction

1. Signage system shall utilize a plastic sphere for Grade II Braille inserted directly into a scratch-resistant, high pressure laminate sign face. Braille dots are to be pressure fit in low tolerance milled holes. Braille dots shall be half hemispherical domed and protruding a minimum .025".

2. Sign face shall be permanently bonded to a composite core and precision machined together to a 90-degree angle. Edges shall be smooth, void chips, burrs, sharp edges, marks and polished to a satin luster.
3. All plaque signs shall have radiused corners of .25”.

2.03 Attachment Devices

- A. Provide vandal resistant concealed fasteners for all signs using manufacturer's standard designed for surface indicated.

PART 3 EXECUTION

3.01 Inspection

- A. Examine all subsurfaces to receive the work. Report in writing to general contractor with copy to A/E any detrimental conditions. Failure to observe this injunction constitutes a waiver to any subsequent claims to the contract and hold signage contractor responsible for any corrections A/E may require. Commencement of the work will be construed as acceptance of all subsurfaces.
- B. Coordinate required surface corrections with contractor responsible for installation.
- C. Installer shall examine signs with General Contractor for defects, damage and compliance with specifications. Installation shall not proceed until unsatisfactory conditions are corrected.

3.02 Installation

- A. Install all items in accordance to approved shop drawings and manufacturer's written instructions.
- B. General: Installation locations shall be in accordance to ADA specifications. Locate signs where indicated on contract drawings, using mounting methods in compliance with manufacturer's instructions.
 1. Signs shall be level, plumb, and at heights indicated, with sign surfaces free from defects.
 2. Interior Wall Signs: Unless otherwise indicated, signs shall be installed on walls adjacent to latch side of door. Where not possible, signs shall be installed on nearest adjacent wall. Locate to allow approach within 3 inches (75mm) of sign without encountering protruding objects or standing within swing of door.
- C. Units shall be installed rigid, straight, plumb, and level.
- D. Provide a secure, vandal-resistant, permanent installation.

3.03 Delivery, Storage, Protection

- A. Package to prevent damage or deterioration during shipment, handling, storage and installation. Products should remain in original packaging until removal is necessary.

3.04 Adjust and Clean

- A. Clean all signage. Use cleaning agent recommended by manufacturer.
- B. Clean premises of all litter, dirt, and debris created by work of this section.

3.05 Manufacturer's Warranty

- A. Provide manufacturer's five year warranty against defect in materials or workmanship including but not limited to delamination, color change, adhesive loosening, or fading.

102800 Toilet and Bath Accessories

PART 1 GENERAL

1.01 Summary

- A. Provide toilet and bath accessories as shown and as specified. Comply with applicable provisions of General Requirements.
- B. Provide all of the following accessories for each new toilet room/stall. For accessories specified herein which are not specifically shown on the drawings, coordinate the location with the engineer.

1.02 Related Sections

Plumbing fixtures - Division 22.

1.03 Submittals

- A. Submit shop drawings, product data, installation instructions, and maintenance recommendations for each toilet accessory. Provide setting drawings, templates, location of recesses and reinforcement, and instructions for installation of anchorage devices.

PART 2 PRODUCTS

2.01 Acceptable Manufacturers

- A. Provide products of same manufacturer for each type of accessory unit and for units exposed in same areas, unless otherwise approved.
- B. Stamped names or labels will not be permitted on exposed faces of units.
- C. Products identified in this Section by reference to a specific manufacturer and product name/number are identified for the purpose of establishing a standard of quality, type, and function. Unless otherwise indicated, products of the following manufacturers or equal may be substituted for those listed, provided the substitution is equal in quality, type, and function and meets the specified requirements:

Accessory Specialties.
American Specialties.
Bobrick Washroom Equipment.
Bradley/Washroom Accessories Div.
General Accessory Mfg.
McKinney/Parker.
Tubular Specialties.

2.02 Mirrors (MR1)

- A. 1/4" thick, No. 1 (mirror glazing) quality, and clean polished plate/float mirror glass electrolytically copper plated, guaranteed against silver spoilage for 15 years. Sizes as noted.

B. Backing shall be resilient, non-absorbent filler material, with not less than 22 ga. galvanized steel backing plate attached to frame with concealed screws, one-piece construction, full height and width of mirror frame. Corrugated cardboard or other moisture absorbent filler material is not acceptable.

C. Construct metal backing with hanger slots for concealed "tamper-proof" mounting. Provide manufacturer's standard hanger to engage with backing for concealed installation.

D. Use one piece roll formed frames, not less than 22 ga., satin finish, type 304 stainless steel, with square corners heli-arc welded and ground smooth.

2.03 Paper Towel Dispenser and Waste Disposal (PTD1)

A. Recessed combination touchless roll-paper-towel dispenser and waste receptacle; with removable/convertible dispenser and receptacle; ADA compliant; 4" recess.

B. All-welded heavy gauge satin-finish stainless steel construction; cabinet with tumbler lock; one-piece 22 gauge beveled flange; 20 gauge one-piece door with full length piano hinge and tumbler lock.

C. Dispenser of high-impact resin materials; to accept standard core non-perforated rolls up to 8" wide and 8" diameter; dispensing 12" length of towel per roll.

D. 18 gallon receptacle of 22 gauge satin-finished stainless steel with hemmed top edges; secured with tumbler lock.

E. Basis of Design: Bobrick B-39617.

2.04 Paper Towel Receptacle (PTR)

A. 22 ga., satin finish, type 304 stainless steel for recess into a 4" wall, of one-piece frame construction, 18 gallon receptacle capacity and tumbler lock.

2.05 Foam Soap Dispenser - Sink Mounted (SD1)

A. Touch-free counter-mount foam soap dispenser, with curved chrome spout to compliment lavatory faucet; sanitary-sealed cartridge refill system; 1500 dispensers per refill; low voltage power supply; 3 year warranty.

B. Coordinate location with lavatory supplier to ensure adequate clearance for proper installation.

C. Basis of Design: Gojo CXi Touch free counter mount dispenser.

2.06 Sanitary Napkin Disposal (SND)

A. Partition-mounted feminine napkin disposal unit; fabricated of 22 ga., satin finish, type 304 stainless steel.

B. Provide surface-mounted disposal unit with locking door.

C. Basis of Design: Bobrick B-254

2.07 Grab Bars (GB-1, GB-2, GB-3)

A. Satin finish, type 304 stainless steel, 1-1/4" dia. x 18 ga. wall thickness, length as shown on Drawings, inserted into stainless steel flange and continuously heli-arc welded. When mounted, space between bar and wall shall be 1-1/2".

B. Provide grab bars with concealed mountings; Bobrick, Tubular Specialties, Saferail, or approved equal.

2.08 Toilet Paper Holder (TPS/TPD)

A. Surface mounted single roll holders with controlled delivery and theft resistant spindle.

1. Basis of Design: Bobrick B273 with 283-604 spindle.

B. At handicap accessible water closets and Family Assisted Toilet Rooms, surface mounted single roll holders without controlled delivery and theft resistant spindle.

1. Basis of Design: Bobrick B2730 with 283-604 spindle.

C. Where double roll holders are indicated provide surface mounted double roll dispenser equivalent to specified single roll toilet paper holders.

D. Satin finish stainless steel.

2.09 Electric Hand Dryer (EHD)

A. Heavy duty, rib reinforced cast iron cover with enamel finish. Color to be selected by A/E. Provide no touch operation with electronic sensor to automatically turn on and off dryer when drying hands. Nozzle to be fixed downward. Units shall be rated at 2300 watts, 110/120 volt, and 20 amp. 10-15 second dry time; surface mounted.

B. Basis of Design: Sloan XLerator or equal.

2.10 Robe Hook (RH)

A. See section 102113.

B. Provide same or similar style at locations other than toilet partitions as indicated.

2.11 Sharps Receptacle (SR)

A. Stainless steel, surface mounted, receptacle for safe secured one-way disposal of used hypodermic needles with tumbler lock.

2.12 Baby Changing Station (BCS)

A. Horizontal, wall-mounted, fold-open polyethylene with concealed stainless steel hinges, contoured bed, instruction graphics, 250 pound capacity, ADA compliant. Blank-out liner dispenser.

B. Basis of Design: Bobrick/Koala KB100-00, cream color.

2.13 Inserts and Anchorages

A. Furnish inserts and anchoring devices for installation of toilet accessories.

PART 3 EXECUTION

3.01 Inspection

A. Examine conditions under which toilet and bath accessories are to be installed. Notify of detrimental conditions. Do not proceed until unsatisfactory conditions have been corrected.

B. Conduct pre-installation meeting with owner to confirm locations noted and resolve potential interferences.

3.02 Installation

A. Use concealed fastenings wherever possible, and as designated. Provide anchors, bolts and other necessary fasteners, and attach accessories securely to walls and partitions in locations as shown and in accordance to manufacturer's instructions.

B. Install concealed mounting devices and fasteners fabricated of same material as accessories or of galvanized steel.

C. Install exposed mounting devices and fasteners finished to match accessories.

D. Provide theft-resistant fasteners for all accessory mountings.

DIVISION 22 - PLUMBING

224000 – Plumbing Specialties

PART 1 GENERAL

1.01 Related Documents

A. Drawings and general provisions of the Contract, including Standard Specification, apply to this section.

1.02 Summary

A. This section includes the following conventional plumbing fixtures and related components:

1. Water closets.
2. Lavatories.

1.03 Submittals

A. Shop Drawings: For each type of plumbing fixture indicated. Include selected fixture and trim, fittings, accessories, appliances, appurtenances, equipment, and supports. Indicate materials and finishes, dimensions, construction details, and flow-control rates.

B. Operation and Maintenance Data: For plumbing fixtures to include in operation and maintenance manuals.

C. Warranty: Special warranty specified in this Section.

1.04 Quality Assurance

A. Source Limitations: Obtain plumbing fixtures, faucets, and other components of each category through one source from a single manufacturer.

1. Exception: If fixtures, faucets, or other components are not available from a single manufacturer, obtain similar products from other manufacturers specified for that category.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act" ; and Public Law 101-336, "Americans with Disabilities Act" ; for plumbing fixtures for people with disabilities.

D. Regulatory Requirements: Comply with requirements in Public Law 102-486, "Energy Policy Act," about water flow and consumption rates for plumbing fixtures.

E. NSF Standard: Comply with NSF 61, "Drinking Water System Components—Health Effects," for fixture materials that will be in contact with potable water.

F. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.

1.05 Manufacturer's Warranty

A. Manufacturer's Warranty Period for Commercial Applications of Electronic Controls: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 Water Closets

A. Water Closets for new Family Assisted Rest Rooms

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a Kohler, American Standard, Crane, Sloan

2. Description: Floor mount, bottom outlet white vitreous china siphon jet close coupled tank type water closet with elongated bowl, 2-1/4" passageway, 17-1/2" barrier free height, insulating tank liner, locking tank cover, 1.6 gallon flush, ADA compliant.

3. Basis of Design: Kohler Highline K-3544

B. Water Closets to replace existing bowls in existing toilet rooms

1. Manufacturers: Subject to compliance with requirements to be equivalent to existing water closets and to field verification of dimensions and plumbing connections, provide products by one of the following:

a. Kohler, American Standard, Crane, Sloan

2. Description: Floor mount, bottom outlet, white, elongated. vitreous china, rear spud, standard and barrier free heights to match existing (Field verify all pertinent information before ordering)

3. Basis of Design: Kohler Highcliff K-4367

C. Seats

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Kohler, American Standard, Crane, Bemis, Beneke

2. Description: Elongated white solid plastic open-front seat with anti-microbial agent, without cover.

3. Basis of Design: Kohler K4670-CA

- D. Supply and Stop for tank type water closets
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Chicago Faucet Co., T&S Brass, McGuire (Heavy Duty type only)
 - 2. Basis of Design: Chicago Faucet Co. No.995-CP with ½" closet riser.

2.02 Lavatories

- A. Lavatory
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Kohler, American Standard, Crane
 - 2. Description: Wall-mount barrier-free white vitreous china lavatory drilled for concealed arm carrier, 4" on center faucet openings, soap dispenser.
 - 3. Basis of Design: Kohler Kingson wall mount sink Model K-2005-L
- B. Faucet
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Moen Commercial, Kohler, Chicago Faucet
 - 2. Description: Maximum 2 gpm flow/ .25 gallons per cycle (based on inlet pressure of 60 psi), battery powered sensor activated, 4" deck plate.
 - 3. Basis of Design: Moen Commercial Model 8305 battery powered with 4" deck plate.
- C. Other components
 - 1. Drain: Kohler K-13885 perforated strainer and 1-1/4" offset tailpiece, or equivalent by Chicago Faucet Co., Engineered Brass Co., Kohler, Watts, Wade, Jr. Smith, Josam.
 - 2. Trap: 1-1/4" X 1-1/2" 17 ga. cast brass trap and tubular wall bend, with C.O. plug. Acceptable manufacturers: Kohler, McGuire, Dearborn, Engineered Brass Co.
 - 3. Supplies and stops: Chicago Faucet No. 1006CP or equivalent by T&S Brass, McGuire.
 - 4. Carriers and supports: Smith floor mounted concealed arm adjustable, or equivalent by Josam, Smith, Wade, Watts Drainage American Standard, Kohler, Crane. Mount fixture at ADA height.

PART 3 EXECUTION

3.01 Examination

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before plumbing fixture installation.
- B. Modify existing plumbing and restore construction and finishes as necessary to replace existing fixtures as indicated.

C. Examine cabinets, counters, floors, and walls for suitable conditions where fixtures will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 Installation

A Assemble plumbing fixtures, trim, fittings, and other components according to manufacturers' written instructions. Set level and plumb. Secure in place to counters, floors and walls providing solid bearing and secure mounting. Bolt fixture carriers to floor and wall. Secure rough-in fixture piping to prevent movement of exposed piping.

B. Install each fixture with trap easily removable for servicing and cleaning. Install fixture stops in readily accessible location for servicing.

C. Install controls for accessible water closets and urinals with manual actuators mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.

D. Install barrier free fixtures in compliance with IBC 1108 and 3408, Comm 52, 69 and Federal ADA Accessibility Guidelines. Install barrier free lavatory traps parallel and adjacent to wall and supplies and stops elevated to 27" above floor to avoid contact by wheelchair users.

E. Provide a stop valve for each fixture, heavy duty type with brass stems and screwed or sweat inlet connections. Compression type inlets are not acceptable.

F. Cover pipe penetration with escutcheons. Exposed traps, stops, piping and escutcheons to be chrome plated brass, same items in concealed locations may be of rough brass finish.

G. Set floor mounted water closets, counter mounted lavs and sinks, lav and sink faucets and drains with full setting bed of flexible non-staining plumber's putty. Cover exposed water closet bolts with bolt covers.

H. Seal openings between walls, floors and fixtures with mildew-resistant silicone sealant same color as fixture.

3.02 Connections

A. Drawings indicate general arrangement of piping, fittings, and specialties. Contractor shall verify pipe sizes and connections prior to ordering flushometer valves.

B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

C. Ground equipment according to NFPA standards

D. Connect wiring according to NFPA standards

3.03 Field Quality Control

- A. Verify that installed plumbing fixtures are categories and types specified for locations where installed.
- B. Check that plumbing fixtures are complete with trim, faucets, fittings, and other specified components.
- C. Inspect installed plumbing fixtures for damage. Replace damaged fixtures and components.
- D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.
- E. Install fresh batteries in sensor-operated mechanisms.

3.04 Adjusting

- A. Operate and adjust faucets and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.
- B. Operate and adjust controls. Replace damaged and malfunctioning units and controls.
- C. Adjust water pressure at flushometer valves to produce proper flow and stream.

3.05 Cleaning

- A. Clean fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials. Do the following:
 - 1. Remove faucet spouts and strainers, remove sediment and debris, and reinstall strainers and spouts.
 - 2. Remove sediment and debris from drains.
- B. After completing installation of exposed, factory-finished fixtures, faucets, and fittings, inspect exposed finishes and repair damaged finishes.

3.06 Protection

- A. Provide protective covering for installed fixtures and fittings.
- B. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 224000

DIVISION 26 - ELECTRICAL

260500 Common Work Results for Electrical

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. Section Includes:

1. Electrical equipment coordination and installation.
2. Sleeves for raceways and cables.
3. Sleeve seals.
4. Common electrical installation requirements.

1.03 Definitions

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. NBR: Acrylonitrile-butadiene rubber.

1.04 Submittals

- A. No Submittal Required.

1.05 Coordination

- A. Coordinate arrangement, mounting, and support of electrical equipment:
 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
 3. To allow right-of-way for piping and conduit installed at required slope.
 4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed.
- D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07

PART 2 - PRODUCTS

2.01 Sleeves for Raceways and Cable

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

2.02 Sleeve Seals

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
 - 1. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
 - 2. Pressure Plates: Stainless steel. Include two for each sealing element.
 - 3. Connecting Bolts and Nuts: Stainless steel] of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.03 Grout

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.01 Common Requirements For Electrical Installation

- A. Comply with NECA 1.
- B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- E. Right of Way: Give to piping systems installed at a required slope.

3.02 Sleeve Installation For Electrical Penetrations

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Cut sleeves to length for mounting flush with both surfaces of walls.
- F. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level.
- G. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and raceway or cable, unless indicated otherwise.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry
 - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint.
- J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials.
- K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

3.03 Sleeve-Seal Installation

- A. Install to seal exterior wall penetrations.

- B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.04 Firestopping

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly.

3.05 Field Quality Control

- A. Inspect installed sleeve and sleeve-seal installations and associated firestopping for damage and faulty work. Replace sleeve and sleeve-seals that are damaged or faulty.

END OF SECTION 260500

260519 - Low-Voltage Electrical Power Conductors and Cables

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. This Section includes the following:
 - 1. Building wires and cables rated 600 V and less.
 - 2. Connectors, splices, and terminations rated 600 V and less.

1.03 Submittals

- A. No Submittal Required.

1.04 Quality Assurance

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

PART 2 - PRODUCTS

2.01 Conductors And Cables

- A. Copper Conductors: Comply with NEMA WC 70.
- B. Conductor Insulation: Comply with NEMA WC 70 for Types THHN-THWN.
- C. All conductors shall be rated 600 volts.
- D. Branch circuit wire sizes not shown on the drawings shall be #12 AWG minimum.
- E. Control circuit wire sizes not shown on the drawings shall be #14 AWG minimum.

2.02 Connectors And Splices

- A. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.
 - 1. Split Bolt Connectors: Not acceptable.
 - 2. Solderless Pressure Connectors: High copper alloy terminal. May be used only for cable termination to equipment pads or terminals. Not approved for splicing.
 - 3. Spring Wire Connectors: Solderless spring type pressure connector with insulating covers for copper wire splices and taps. Use for conductor sizes 10 AWG and smaller.

4. All wire connectors used in underground or exterior pull boxes shall be gel filled twist connectors or a connector designed for damp and wet locations.
5. Mechanical Connectors: Bolted type tin-plated; high conductivity copper alloy; spacer between conductors; beveled cable entrances.
6. Compression (crimp) Connectors: Long barrel; seamless, tin-plated electrolytic copper tubing; internally beveled barrel ends. Connector shall be clearly marked with the wire size and type and proper number and location of crimps.

PART 3 - EXECUTION

3.01 Conductor Material Applications

- A. Feeders: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

3.02 Conductor Insulation and Wiring Methods

- A. Service Entrance: Type THHN-THWN, single conductors in raceway.
- B. Exposed Feeders: Type THHN-THWN, single conductors in raceway.
- C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace: Type THHN-THWN, single conductors in raceway.
- D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway.
- E. Feeders Installed below Raised Flooring: Type THHN-THWN, single conductors in raceway.
- F. Exposed Branch Circuits, Including in Crawlspace: Type THHN-THWN, single conductors in raceway.
- G. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway.
- H. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway.

3.03 Installation Of Conductors And Cables

- A. Wire and cable routing is shown diagrammatically on the drawings and is approximate unless dimensioned. Route wire and cable as required to meet project conditions.
- B. All power, control and instrument wiring shall be installed in conduit unless specifically indicated otherwise.

- C. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.
- D. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- E. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
- F. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
- G. Support cables according to Division 26.
- H. Identify and color-code conductors and cables according to Division 26.

3.04 Connections

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
- C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches (150 mm) of slack.
- D. All conductors terminated with crimp type devices must be stranded.
- E. Stranded conductors may only be terminated with UL or ETL Listed type terminations or methods: e.g. stranded conductors may not be wrapped around a terminal screw but must be terminated with a crimp type device.

3.05 Firestopping

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly.

END OF SECTION 260519

260526 - Grounding And Bonding For Electrical Systems

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. This Section includes methods and materials for grounding systems and equipment.

1.03 Submittals

- A. None required.

1.04 Quality Assurance

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.01 Conductors

- A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.
- B. Bare Copper Conductors:
 - 1. Solid Conductors: ASTM B 3.
 - 2. Stranded Conductors: ASTM B 8.
 - 3. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch (6 mm) in diameter.
 - 4. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
 - 5. Bonding Jumper: Copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.
- C. Grounding Bus: Rectangular bars of annealed copper, 1/4 by 2 inches (6 by 50 mm) in cross section, unless otherwise indicated; with insulators.

2.02 Connectors

- A. Listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.
- B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, bolted pressure-type, with at least two bolts.
 - 1. Pipe Connectors: Clamp type, sized for pipe.

PART 3 - EXECUTION

3.01 Applications

- A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger, unless otherwise indicated.
- B. Conductor Terminations and Connections:
 - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.

3.02 Equipment Grounding

- A. Install insulated equipment grounding conductors with all feeders and branch circuits.
- B. Signal and Communication Equipment: For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.
 - 1. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-2-by-12-inch (6-by-50-by-300-mm) grounding bus.

3.03 Installation

- A. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- B. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
 - 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
 - 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
 - 3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.

C. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes, using a bolted clamp connector or by bolting a lug-type connector to a pipe flange, using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

END OF SECTION 260526

260529 - Hangers And Supports For Electrical Systems

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. This Section includes the following:
 - 1. Hangers and supports for electrical equipment and systems.
 - 2. Construction requirements for concrete bases.

1.03 Definitions

- A. EMT: Electrical metallic tubing.
- B. IMC: Intermediate metal conduit.
- C. RMC: Rigid metal conduit.
- D. MFMA-4: Metal Framing Manufacturers Association.
- E. MSS: Manufacturers Standardization Society of the Pipe, Valve, and Fitting Industry.

1.04 Performance Requirements

- A. Provide supports for multiple raceways capable of supporting combined weight of supported systems and its contents.

1.05 Submittals

- A. No Submittal Required.

1.06 Quality Assurance

- A. Comply with NFPA 70.

1.07 Coordination

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

PART 2 - PRODUCTS

2.01 Support, Anchorage, And Attachment Components

- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
 - 1. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
 - 2. Channel Dimensions: Selected for applicable load criteria.
- B. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
- C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
- D. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- E. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
 - 1. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used. Plastic type expansion anchors are unacceptable.
 - 2. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
 - 3. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
 - 4. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
 - 5. Toggle Bolts: All-steel springhead type.
 - 6. Hanger Rods: Threaded steel.

2.02 Fabricated Metal Equipment Support Assemblies

- A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

PART 3 - EXECUTION

3.01 Application

- A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.
- B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch (6 mm) in diameter.
- C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
 - 1. Secure raceways and cables to these supports with single-bolt conduit clamps.
- D. All supports installed outside, exposed to the weather, or inside in wet or damp areas shall utilize corrosion resistant supports, fittings, hardware, conduit clamps and all accessories.

3.02 Support Installation

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.
- B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).
- D. All electrical fixtures, devices, and equipment shall be securely mounted to building structure and shall not depend upon ceiling or wall surfaces for their support. They shall be incapable of being rotated or displaced.
- E. Do not fasten supports to piping, ductwork, mechanical equipment, cable tray, conduit, or any other surface not a part of the building structure or other structural surface.
- F. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

1. To Wood: Fasten with lag screws or through bolts.
 2. To New Concrete: Bolt to concrete inserts.
 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
 4. To Existing Concrete: Expansion anchor fasteners.
 5. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69.
 6. To Light Steel: Sheet metal screws.
 7. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.
- G. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.
- H. Do not drill or weld structural steel members unless approved by Engineer.

3.03 Installation Of Fabricated Metal Supports

- A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

3.04 Painting

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).
- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION 260529

260533 - Raceway and Boxes For Electrical Systems

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

1.03 Definitions

- A. EMT: Electrical metallic tubing.
- B. ENT: Electrical nonmetallic tubing.
- C. EPDM: Ethylene-propylene-diene terpolymer rubber.
- D. FMC: Flexible metal conduit.
- E. IMC: Intermediate metal conduit.
- F. LFMC: Liquidtight flexible metal conduit.
- G. LFNC: Liquidtight flexible nonmetallic conduit.
- H. NBR: Acrylonitrile-butadiene rubber.
- I. RNC: Rigid nonmetallic conduit.

1.04 Submittals

- A. No Submittal Required.

1.05 Quality Assurance

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

1.06 Coordination

- A. Coordinate layout and installation of raceways, boxes, enclosures, cabinets, and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.01 Metal Conduit And Tubing

- A. Rigid Steel Conduit: ANSI C80.1.
- B. IMC: ANSI C80.6.
- C. EMT: ANSI C80.3.
- D. FMC: Zinc-coated steel.
- E. LFMC: Flexible steel conduit with PVC jacket.
- F. Fittings for Conduit (Including all Types and Flexible and Liquidtight), EMT, and Cable: NEMA FB 1; listed for type and size raceway with which used, and for application and environment in which installed.
 - 1. Fittings for EMT: Steel or die-cast, compression type.
- G. Expansion Fittings: Type XJ with copper bonding jumpers.

2.02 Nonmetallic Conduit And Tubing

- A. ENT: NEMA TC 13.
- B. RNC: NEMA TC 2, Type EPC-40-PVC, unless otherwise indicated.
- C. LFNC: UL 1660.
- D. Fittings for ENT and RNC: NEMA TC 3; match to conduit or tubing type and material.
- E. Fittings for LFNC: UL 514B.

2.03 Surface Raceways

- A. Surface Metal Raceways: Galvanized steel with snap-on covers. Manufacturer's standard finish.
- B. Types, sizes, and channels as indicated and required for each application, with fittings that match and mate with raceways.

2.04 Boxes, Enclosures, And Cabinets

- A. Sheet Metal Outlet and Device Boxes: NEMA OS 1.
- B. Cast-Metal Outlet and Device Boxes: NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.

- C. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- D. Cast-Metal Access, Pull, and Junction Boxes: NEMA FB 1, galvanized, cast iron with gasketed cover.
- E. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous-hinge cover with flush latch, unless otherwise indicated.
 - 1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
- F. Cabinets:
 - 1. NEMA 250, Type 1 unless stated otherwise on drawings, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
 - 2. Hinged door in front cover with flush latch and concealed hinge.
 - 3. Key latch to match panelboards.
 - 4. Metal barriers to separate wiring of different systems and voltage.

PART 3 - EXECUTION

3.01 Raceway Application

- A. Outdoors: Apply raceway products as specified below, unless otherwise indicated:
 - 1. Exposed Conduit: Rigid steel conduit.
 - 2. Concealed Conduit, Aboveground: Rigid steel conduit.
 - 3. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
 - 4. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
- B. Comply with the following indoor applications, unless otherwise indicated:
 - 1. Exposed, Not Subject to Physical Damage: EMT.
 - 2. Concealed in Ceilings and Interior Walls and Partitions: EMT.
 - 3. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
 - 4. Damp or Wet Locations: EMT.
 - 5. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 3R, powder coated steel in damp or wet locations.
- C. Minimum Raceway Size: 3/4-inch (21-mm) trade size.

- D. Raceway Fittings: Compatible with raceways and suitable for use and location.
 - 1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.
 - 2. Rigid Nonmetallic Conduit: Use PVC fittings, unless otherwise indicated.

3.02 Installation

- A. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter.
- B. Keep raceways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
- C. Complete raceway installation before starting conductor installation.
- D. Support raceways as specified in Division 26.
- E. Install temporary closures to prevent foreign matter from entering raceways.
- F. Unused openings in boxes and fittings shall be plugged with suitable devices rated for the proper environment.
- G. Make bends and offsets so ID is not reduced. Keep legs of bends in the same plane and keep straight legs of offsets parallel, unless otherwise indicated.
- H. Arrange stub-ups so curved portions of bends are not visible above the finished slab.
- I. Conceal conduit and EMT within finished walls, and ceilings, unless otherwise indicated.
- J. Install exposed raceways parallel or at right angles to nearby surfaces or structural members and follow surface contours as much as possible.
 - 1. Run parallel or banked raceways together on common supports.
 - 2. Make parallel bends in parallel or banked runs. Use factory elbows only where elbows can be installed parallel; otherwise, provide field bends for parallel raceways.
- K. Install concealed raceways with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.
- L. Conduit shall not be routed under floor slab unless specifically noted on drawings.
- M. All conduit installed outside exposed to the weather and in wet locations shall utilize sealing locknuts and bushings.

- N. Provide polished stainless steel escutcheon plates to provide smooth cleanable surfaces at wall penetrations. Affix plate securely to surface and caulk around plate.
- O. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
- P. Join raceways with fittings designed and approved for that purpose and make joints tight.
- Q. Terminations:
1. When raceways are terminated with locknuts and bushings, align raceways to enter squarely and install locknuts with dished part against box. Use two locknuts, one inside and one outside box.
 2. Where raceways are terminated with threaded hubs, screw raceways or fittings tightly into hub so end bears against wire protection shoulder. Where chase nipples are used, align raceways so coupling is square to box; tighten chase nipple so no threads are exposed.
- R. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire.
- S. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:
1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 2. Where otherwise required by NFPA 70.
- T. Expansion fittings shall be installed across expansion joints in structures and concrete construction where such joints are shown on the architectural and structural drawings.
- U. Flexible Conduit Connections: Use maximum of 72 inches (1830 mm) of flexible conduit for recessed and semirecessed lighting fixtures, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
1. Use LFMC in damp or wet locations subject to severe physical damage.
 2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.
- V. Locate and install boxes to allow access to them. Where installation is inaccessible, coordinate locations and provide 18 inch by 24 inch access doors.

- W. No back to back outlet boxes shall be installed.
- X. Electrical box locations shown on drawings are approximate unless dimensioned. Verify location of floor boxes and outlets in offices and work areas prior to rough-in.
- Y. No outlet shall be located where it will be obstructed by other equipment, piping, lockers, benches, counters, etc.
- Z. It shall be the Contractor's responsibility to study drawings pertaining to other trades, to discuss location of outlets with workmen installing other piping and equipment and to fit all electrical outlets to job conditions.
- AA. The proper location of each outlet is considered a part of this contract and no additional compensation will be paid to the Contractor for moving outlets which were improperly located.
- BB. Coordinate mounting heights and locations of outlets mounted above counters, benches, and backsplashes.
- CC. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall.
- DD. Set metal floor boxes level and flush with finished floor surface.
- EE. Install hinged-cover enclosures and cabinets plumb. Support at each corner.

3.03 Firestopping

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07.

3.04 Protection

- A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.
 - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 - 2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 260533

260923 - Lighting Control Devices

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. This Section includes the following lighting control devices:

1. Outdoor and indoor photoelectric switches.
2. Indoor occupancy sensors.
3. Lighting contactors.

1.03 Definitions

- A. LED: Light-emitting diode.
- B. PIR: Passive infrared.

1.04 Submittals

- A. Product Data: For each type of product indicated.
- B. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.

1.05 Quality Assurance

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked

1.06 Coordination

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.01 Outdoor Photoelectric Switches

- A. Description: Solid state, with SPST dry contacts rated for 1800-VA tungsten or 1000-VA inductive, to operate connected relay, contactor coils, or microprocessor input; complying with UL 773A.
 1. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lx), with an adjustment for turn-on and turn-off levels within that range, and a directional lens in front of photocell to prevent fixed light sources from causing turn-off.

2. Time Delay: 15-second minimum, to prevent false operation.
3. Mounting: Fixed base for conduit mounting and capable of being wall mounted.
4. Shall fail in ON position.

2.02 Indoor Photoelectric Switches

A. Ceiling-Mounted Photoelectric Switch: Solid-state, light-level sensor unit, with separate relay unit, to detect changes in lighting levels that are perceived by the eye. Cadmium sulfide photoresistors are not acceptable.

1. Lens or angled entrance to photocell to prevent false shutoff.
2. Sensor Output: Contacts rated to operate the associated relay, complying with UL 773A. Sensor shall be powered from the relay unit.
3. Relay Unit: Dry contacts rated for 20-A ballast load at 120V ac.
4. Light-Level Monitoring Range: 10 to 200 fc (108 to 2152 lx), with a digital footcandle adjustment for turn-on and turn-off levels throughout that range.
5. Time Delay: Adjustable up to minimum 20 minutes to prevent cycling, with deadband adjustment.
6. Indicator: LED(s) to indicate the beginning of on-off cycles.
7. Shall fail in ON position.

2.03 Indoor Occupancy Sensors

A. General Description: Ceiling-mounting, solid-state units with a separate relay unit.

1. Operation: Unless otherwise indicated, turn lights on when covered area is occupied and off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.
3. Relay Unit: Dry contacts rated for 20-A ballast load at 120V ac.
4. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch (13-mm) knockout in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed.
5. Indicator: LED, to show when motion is being detected during testing and normal operation of the sensor.
6. Bypass Switch: Override the on function in case of sensor failure.

B. PIR Type: Ceiling mounting; detect occupancy by sensing a combination of heat and movement in area of coverage.

1. Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm).
2. Detection Coverage (Room): Detect occupancy anywhere in a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.

3. Detection Coverage (Corridor): Detect occupancy within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling.
- C. Ultrasonic Type: Ceiling mounting; detect occupancy by sensing a change in pattern of reflected ultrasonic energy in area of coverage.
1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).
 2. Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft. (56 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 3. Detection Coverage (Corridor): Detect occupancy anywhere within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling in a corridor not wider than 14 feet (4.3 m).

2.04 Lighting Contactors

- A. Description: Electrically operated and mechanically held, complying with NEMA ICS 2 and UL 508.
1. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush ballast (ballast with 15 percent or less total harmonic distortion of normal load current).
 2. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
 3. Enclosure: Comply with NEMA 250.
 4. Control-Coil Voltage: Match control power source.

PART 3 - EXECUTION

3.01 Sensor Installation

- A. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.
- B. All lighting control units shall be installed in an appropriate enclosure for the type of environment encountered. No exposed wiring shall be permitted inside of the building or pedestal mounted enclosure in which this equipment is installed.
- C. Photoelectric switches shall be oriented to the north or east with only eye visible from the exterior of the enclosure.

3.02 Wiring Installation

- A. Wiring Method: Comply with Division 26.
- B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.

- C. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.
- D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.03 Identification

- A. Identify components and power and control wiring according to Division 26.

- 1. Identify controlled circuits in lighting contactors.

- B. Label time switches and contactors with a unique designation.

3.04 Field Quality Control

- A. Perform the following field tests and inspections:

- 1. After installing time switches and sensors, and after electrical circuitry has been energized, adjust and test for compliance with requirements.
 - 2. Operational Test: Verify operation of each lighting control device, including operation of photo eyes at sunset or sunrise, and adjust time delays.

- B. Lighting control devices that fail tests and inspections are defective work.

- C. Remove and replace lighting control devices where test results indicate that they do not comply with specified requirements.

- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.05 Training

- A. Spend at least (2) hours training (2) owner-specified personnel in operation and maintenance of lighting control devices using O&M manuals.

END OF SECTION 260923

262416 - Panelboards

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. Section Includes:
 - 1. Distribution panelboards.
 - 2. Lighting and appliance branch-circuit panelboards.

1.03 Definitions

1.04 Submittals

- A. Product Data: For each type of panelboard, switching and overcurrent protective device, transient voltage suppression device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
- B. Shop Drawings: For each panelboard and related equipment.
 - 1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
 - 2. Detail enclosure types.
 - 3. Detail bus configuration, current, and voltage ratings.
 - 4. Short-circuit current rating of panelboards and overcurrent protective devices.
 - 5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
 - 6. Component list.
 - 7. Cable terminal sizes.
 - 8. Breaker layout drawing with dimensions indicated and nameplate designation.

1.05 Quality Assurance

- A. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NEMA PB 1.
- D. Comply with NFPA 70.

1.06 Delivery, Storage, And Handling

- A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.
- B. Handle and prepare panelboards for installation according to NEMA PB 1.

1.07 Project Conditions

- A. Environmental Limitations:
 - 1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
 - 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 - a. Ambient Temperature: Not exceeding 23 deg F (minus 5 deg C) to plus 104 deg F (plus 40 deg C).
- B. Service Conditions: NEMA PB 1, usual service conditions, as follows:
 - 1. Ambient temperatures within limits specified.

1.08 Coordination

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

1.09 Extra Materials

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Keys: Six spares for each type of panelboard cabinet lock.

PART 2 - PRODUCTS

2.01 General Requirements For Panelboards

- A. Enclosures: Surface-mounted cabinets.
 - 1. Rated for environmental conditions at installed location. Provide the following minimum requirements, unless noted otherwise on the drawings.
 - a. Indoor Dry and Clean Locations: NEMA 250, Type 1.

2. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box.
 3. Finishes:
 - a. Panels and Trim: Steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
 - b. Back Boxes: Same finish as panels and trim.
 4. Directory Card: Inside panelboard door, mounted in metal frame with transparent protective cover.
- B. Phase, Neutral, and Ground Buses:
1. Material: Hard-drawn copper, 98 percent conductivity.
 2. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
- C. Conductor Connectors: Suitable for use with conductor material and sizes.
1. Material: Hard-drawn copper, 98 percent conductivity.
 2. Main and Neutral Lugs: Mechanical type.
 3. Ground Lugs and Bus-Configured Terminators: Compression type.
 4. Feed-Through Lugs: Mechanical type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
- D. Service Equipment Label: NRTL labeled for use as service equipment for panelboards.
- E. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.
- F. Panelboard Short-Circuit Current Rating: Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by an NRTL. Include size and type of allowable upstream and branch devices, listed and labeled for series-connected short-circuit rating by an NRTL.
- G. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals.

2.02 Distribution Panelboards

- A. Panelboards: NEMA PB 1, power and feeder distribution type.
- B. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
1. For doors more than 36 inches (914 mm) high, provide two latches, keyed alike.
- C. Mains: Thermal-Magnetic circuit breaker or lugs only, as shown on drawings.

- D. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Thermal-Magnetic Bolt-on circuit breakers.
- E. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Thermal-Magnetic Bolt-on circuit breakers.

2.03 Lighting And Appliance Branch-Circuit Panelboards

- A. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.
- B. Mains: Circuit breaker or lugs only, as shown on drawings.
- C. Branch Overcurrent Protective Devices: Thermal-Magnetic Bolt-on circuit breakers, replaceable without disturbing adjacent units.
- D. Doors: Hinged; secured with flush latch with tumbler lock; keyed alike.

2.04 Disconnecting And Overcurrent Protective Devices

- A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with series-connected rating and interrupting capacity to meet available fault currents.
 - 1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - 2. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
 - a. Standard frame sizes, trip ratings, and number of poles.
 - b. Lugs: Compression or Mechanical style, suitable for number, size, trip ratings, and conductor materials.
 - c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding high-intensity discharge (HID) lighting circuits.
 - d. Multipole units enclosed in a single housing or factory assembled to operate as a single unit.
 - e. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in on or off position.

2.05 Accessory Components And Features

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

PART 3 - EXECUTION

3.01 Examination

- A. Receive, inspect, handle, and store panelboards according to NECA 407.
- B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

- C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 Installation

- A. Install panelboards and accessories according to NECA 407.
- B. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
- C. Mount top of trim 90 inches (2286 mm) above finished floor unless otherwise indicated.
- D. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- E. Install overcurrent protective devices and controllers not already factory installed.
- F. Install filler plates in unused spaces.
- G. Arrange conductors in gutters into groups and bundle and wrap with wire ties .
- H. Comply with NECA 1.

3.03 Identification

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Division 26.
- B. Create a directory to indicate installed circuit loads; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.
- C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Division 26.
- D. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.04 Field Quality Control

- A. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.

B. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Instruments and Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

C. Panelboards will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.05 Adjusting

A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

3.06 Protection

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION 262416

262726 - Wiring Devices

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. This Section includes the following:
 - 1. Receptacles.
 - 2. Snap switches and wall-box dimmers.
 - 3. Wall plates.

1.03 Definitions

- A. EMI: Electromagnetic interference.
- B. GFCI: Ground-fault circuit interrupter.
- C. Pigtail: Short lead used to connect a device to a branch-circuit conductor.
- D. RFI: Radio-frequency interference.
- E. TVSS: Transient voltage surge suppressor.
- F. UTP: Unshielded twisted pair.

1.04 Submittals

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.

1.05 Quality Assurance

- A. Source Limitations: Obtain each type of wiring device and associated wall plate through one source from a single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.01 Straight Blade Receptacles

- A. Convenience Receptacles, Heavy-Duty grade, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.

2.02 GFCI Receptacles

- A. General Description: Straight blade, Heavy-duty grade, feed-through type. Comply with NEMA WD 1, NEMA WD 6, configuration 5-20R, UL 498, and UL 943, Class A, and include indicator light that is lighted when device is tripped.

- B. Duplex GFCI Convenience Receptacles, 125 V, 20 A:

2.03 Snap Switches

- A. Comply with NEMA WD 1 and UL 20.
- B. Switches, Heavy-duty grade, 120/277 V, 20 A:
- C. Key-Operated Switches, 120/277 V, 20 A:
 - 1. Description: Single pole, with factory-supplied key in lieu of switch handle. Provide two spare keys for every switch.

2.04 Communications Outlets

- A. Telephone Outlet:
 - 1. Description: Single RJ-45 jack for terminating 100-ohm, balanced, four-pair UTP; TIA/EIA-568-B.1; complying with Category 5e. Comply with UL 1863.

2.05 Wall Plates

- A. Single and combination types to match corresponding wiring devices.
 - 1. Plate-Securing Screws: Metal with head color to match plate finish.
 - 2. Material for Finished Spaces: Smooth, high-impact thermoplastic.
 - 3. Material for Unfinished Spaces: Galvanized steel.
 - 4. Material for Damp Locations: Thermoplastic with spring-loaded lift cover, and listed and labeled for use in "wet locations."
- B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with type 3R weather-resistant thermoplastic with lockable cover.

2.06 Finishes

- A. Color:
 - 1. Wiring Devices Connected to Normal Power System: Match existing, unless otherwise indicated or required by NFPA 70 or device listing.

PART 3 - EXECUTION

3.01 Installation

A. Coordination with Other Trades:

1. Take steps to ensure that devices and their boxes are protected. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of the boxes.
2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
4. Install wiring devices after all wall preparation, including painting, is complete.

B. Conductors:

1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.
4. Existing Conductors:
 - a. Cut back and pigtail, or replace all damaged conductors.
 - b. Straighten conductors that remain and remove corrosion and foreign matter.
 - c. Pigtailing existing conductors is permitted provided the outlet box is large enough.

C. Device Installation:

1. Install devices and assemblies level, plumb, and square with building lines.
2. Connection to receptacles and switches shall utilize screw terminals. Plug-in connections are not acceptable.
3. Remove wall plates and protect devices and assemblies during painting.
4. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.
5. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
6. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
7. Connect devices to branch circuits using pigtails that are not less than 6 inches (152 mm) in length.

8. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
 9. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
 10. Tighten unused terminal screws on the device.
 11. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.
 12. Receptacles shall have a bonding conductor from grounding terminal to the ground system. Self-grounding receptacles using mounting screws as bonding means are not acceptable.
 13. GFCI receptacles shall be installed in a non-feed through configuration, with a GFCI receptacle in each location indicated on drawings, unless otherwise indicated.
- D. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.
- E. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.

3.02 Identification

- A. Comply with Division 26.

3.03 Field Quality Control

- A. Perform tests and inspections.
1. After installing wiring devices and after electrical circuitry has been energized, test for proper polarity, ground continuity, and compliance with requirements.
 2. Test GFCI operation with both local and remote fault simulations according to manufacturer's written instructions.
- B. Remove malfunctioning units, replace with new units, and retest as specified above.

END OF SECTION 262726

265100 - Lighting

PART 1 - GENERAL

1.01 Related Documents

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 Summary

- A. This Section includes the following:
 - 1. Interior lighting fixtures, lamps, and ballasts.
 - 2. Lighting fixture supports.

1.03 Definitions

- A. BF: Ballast factor.
- B. CRI: Color-rendering index.
- C. CU: Coefficient of utilization.
- D. FMG: Factory Mutual Group
- E. LER: Luminaire efficacy rating.
- F. Luminaire: Complete lighting fixture, including ballast housing if provided.
- G. RCR: Room cavity ratio.

1.04 Submittals

- A. Product Data: For each type of lighting fixture, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:
 - 1. Physical description of lighting fixture including dimensions.
 - 2. Ballast.
 - 3. Energy-efficiency data.
 - 4. Life, output, and energy-efficiency data for lamps.
 - 5. Photometric data, in IESNA format, based on laboratory tests of each lighting fixture type, outfitted with lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.
 - a. Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program (NVLAP) for Energy Efficient Lighting Products.
- B. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals.
- C. Warranties: Special warranties specified in this Section.

1.05 Quality Assurance

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.
- D. All lamps shall be new and delivered to the job in sealed cartons protected from dirt and dust during storage on the project. Lamps shall be taken directly from the cartons and installed in the fixture with special care so that they do not become dusty and are not soiled in the operation.

1.06 Coordination

- A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.

1.07 Extra Materials

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Lamps: Furnish one of each type.
 - 2. Plastic Diffusers and Lenses: Furnish at least two of each type.
 - 3. Ballasts: Furnish one of each type of ballasts installed.

PART 2 - PRODUCTS

2.01 Lighting Fixtures And Components, General Requirements

- A. Provide fixtures as indicated on drawings.
- B. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.
- C. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.
- D. Metal Parts: Free of burrs and sharp corners and edges.
- E. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.

- F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.
- G. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
 - 1. White Surfaces: 85 percent.
 - 2. Specular Surfaces: 83 percent.
 - 3. Diffusing Specular Surfaces: 75 percent.
 - 4. Laminated Silver Metallized Film: 90 percent.
- H. Plastic Diffusers, Covers, and Globes:
 - 1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
 - a. Lens Thickness: At least 0.125 inch (3.175 mm) minimum unless different thickness is indicated.
 - b. UV stabilized.
 - 2. Glass: Annealed crystal glass, unless otherwise indicated.

2.02 Ballasts For Linear Fluorescent Lamps

- A. Electronic Ballasts: Comply with ANSI C82.11; rapid programmed-start type, unless otherwise indicated, and designed for type and quantity of lamps served. Ballasts shall be designed for full light output unless dimmer or bi-level control is indicated.
 - 1. Sound Rating: A.
 - 2. Total Harmonic Distortion Rating: Less than 10 percent.
 - 3. Transient Voltage Protection: IEEE C62.41, Category A or better.
 - 4. Operating Frequency: 42 kHz or higher.
 - 5. Lamp Current Crest Factor: 1.7 or less.
 - 6. BF: See plans.
 - 7. Power Factor: 0.95 or higher.
 - 8. Parallel Lamp Circuits: Multiple lamp ballasts shall comply with ANSI C 82.11 and shall be connected to maintain full light output on surviving lamps if one or more lamps fail.
 - 9. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.
- B. Single Ballasts for Multiple Lighting Fixtures: Factory-wired with ballast arrangements and bundled extension wiring to suit final installation conditions without modification or rewiring in the field.

2.03 Fluorescent Lamps

- A. Low-Mercury Lamps: Comply with EPA's toxicity characteristic leaching procedure test; shall yield less than 0.2 mg of mercury per liter when tested according to NEMA LL1.
- B. T8 rapid-start low-mercury lamps, rated 32 W maximum, nominal length of 48 inches (1220 mm), CRI 80 (minimum), color temperature 4100 K, and average rated life 20,000 hours, unless otherwise indicated. See plans for further details.
- C. T8 rapid-start low-mercury lamps, rated 17 W maximum, nominal length of 24 inches (610 mm), CRI 80 (minimum), color temperature 4100 K, and average rated life of 20,000 hours, unless otherwise indicated. See plans for further details.

2.04 Retrofit 250W HID Fixtures

- A. Retrofit with LED luminaire meeting the following standards:
 - 1. 5,500 Lumens min (multiple LED units may be used per fixture)
 - 2. Power Factor greater than 95% @ 110V
 - 3. Color Rendering Index (CRI): 75 min
 - 4. Surge suppression protection
 - 5. U.L. listed for wet locations
 - 6. RoHS compliant for lead and mercury standards
 - 7. IP-65 weather fastness rating
 - 8. 100,000 hour, L70 lifetime rating
 - 9. Remote - Phosphor LED with 4000K color standard

2.05 Retrofit 400W HID Fixtures

- A. Retrofit with LED luminaire meeting the following standards:
 - 1. 5,500 Lumens min (multiple LED units may be used per fixture)
 - 2. Power Factor greater than 95% @ 110V
 - 3. Color Rendering Index (CRI): 75 min
 - 4. Surge suppression protection
 - 5. U.L. listed for wet locations
 - 6. RoHS compliant for lead and mercury standards
 - 7. IP-65 weather fastness rating
 - 8. 100,000 hour, L70 lifetime rating
 - 9. Remote-Phosphor LED with 4000K color standard

2.06 Lighting Fixture Support Components

- A. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gage (2.68 mm).

PART 3 - EXECUTION

3.01 Installation

- A. Lighting fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.
 - 1. The contractor shall install fixture supports as required to support all lighting fixtures adequately, providing extra steel work for the support of the fixtures if required. Any components necessary for mounting fixtures shall be provided by the contractor.
- B. Adjust aimable lighting fixtures to provide required light intensities.
- C. Connect wiring according to Division 26.
- D. Bond fixtures and metal accessories to branch circuit equipment grounding conductor.
- E. All fixtures shall be checked and cleaned if necessary prior to installing lamps in fixtures.
- F. Contractor shall re-lamp any fixtures that have failed until substantial completion of the project at no additional cost to the owner.

END OF SECTION 265100

APPENDIX A – REFERENCE DRAWINGS

1.01 Reference Drawings

- A. Drawings from original construction of the building are provided for general reference purposes only, to provide an overview of the building arrangement relative to the scope of the work.
- B. These drawings may or may not fully reflect actual existing conditions.
 - 1. Contractor shall visit site to field verify any and all dimensions, quantities and conditions as may be pertinent to the work scope prior to submitting a proposal.
 - 2. Contractor shall confirm existing conditions as appropriate prior to ordering or fabricating materials.
 - 3. No consideration will be given for additional work due to the Contractor's reliance on this data in lieu of his own field investigations.
- C. A full set of the file drawings is available on request.

ADDITIONAL SPECIAL PROVISION 4

Payment to First-Tier Subcontractors

Within 10 calendar days of receiving a progress payment for work completed by a subcontractor, pay the subcontractor for that work. The prime contractor may withhold payment to a subcontractor if, within 10 calendar days of receipt of that progress payment, the prime contractor provides written notification to the subcontractor and the department documenting the reasons for withholding payment.

The prime contractor may also withhold retainage from payments due subcontractors. Reduce the total amount retained from all first-tier subcontractors to no more than the department retains within 10 calendar days of the department releasing retainage.

Payment to Lower-Tier Subcontractors

Ensure that subcontracting agreements at all tiers provide prompt payment and release of retainage rights to lower-tier subcontractors that parallel those granted first-tier subcontractors in this provision.

ADDITIONAL SPECIAL PROVISION 6

ASP 6 - Modifications to the standard specifications

Make the following revisions to the 2013 edition of the standard specifications:

104.4 Requests for Information

Replace paragraph one with the following effective with the July 2013 letting:

- (1) Either the department or the contractor may request information that the other party must provide in order for the requesting party to fulfill its contract obligations. The requesting party shall submit requests for information (RFI) on department form DT2502 either in hard copy or via email. RFI must conform to the following:
 - Be of reasonable scope.
 - Explain why a response is necessary to fulfill contract obligations.
 - Provide a requested response time, which must be reasonable in relation to its scope.
-

106.1 General

Replace the entire text with the following effective with the July 2013 letting:

106.1.1 Materials

- (1) Provide materials conforming to the contract. Use new products and materials for items permanently incorporated into the work unless the contract specifies or allows otherwise. Use materials the contract specifies unless the engineer authorizes substitutes under 108.8. Monitor construction operations to identify potential nonconforming materials and prevent their incorporation into the work.
- (2) All materials are subject to the engineer's approval before incorporation into the work. The engineer may inspect or test all materials at any time during their preparation, storage, and use. Notify the engineer of the proposed source of materials before delivering those materials to the project site. If the engineer requests, provide samples of material and access to facilities that the engineer needs to assess the acceptability of all materials. The department will, on request, share with the contractor available information on a source or material. The department will maintain a web-based list of approved aggregate sources. Aggregate producers must provide test results as required in the department policy for aggregate source approval to have their source approved and to keep that approval over time.
- (3) For fabricated components, the materials and the fabricator are subject to the department's approval before delivery of those components to the project site. The engineer may require the contractor to obtain components from another department-approved source if the department determines a fabricator's product does not conform to the contract.
- (4) Do not incorporate materials into the work until the engineer approves those materials. However, the contractor may request permission to incorporate materials not already approved. The engineer will grant this permission only if the contractor can provide convincing evidence that the engineer will subsequently find those materials conforming. Incorporation of materials before approval is at the contractor's risk and permission to do so does not imply that the department will subsequently approve those materials.
- (5) Except as required under the contract, ensure that products incorporated into the work, either temporarily or permanently, do not display advertising or messages not directly related to the manufacturer, properties, or function of those products; or advertising or messages in violation of state statutes

106.1.2 Designated Materials Person

- (1) Designate one person, either a member of the contractor's own organization or acting as an agent for the contractor responsible for the following:
 - Communicating contract sampling and testing requirements to subcontractors at all tiers.
 - Reporting out-of-specification test results to the department as soon as the information is available.

- Providing certified reports of test or analysis and manufacturers' certificates of compliance from subcontractors at all tiers and maintaining certification records as specified in 106.3.3.2.
 - (2) Ensure that the contractor-designated materials person submits materials information required under the contract to a person the engineer designates. Ensure that the contractor-designated materials person communicates with their department counterpart weekly.
-

106.3.4.3.1 General

Replace paragraph two with the following effective with the November 2012 letting:

- (2) Required sampling and testing methodologies and documentation are specified in CMM chapter 8.
 - (3) If disputed, approval of materials and components, as well as acceptance of the work incorporating those materials or components, is subject to review under the QMP dispute resolution process.
-

107.17.3 Railroad Insurance Requirements

Replace the entire text with the following effective with the August 2012 letting:

- (1) If required by the special provisions, provide or arrange for a subcontractor to provide railroad protective liability insurance in addition to the types and limits of insurance required in 107.26. Keep railroad protective liability insurance coverage in force until completing all work, under or incidental to the contract, on the railroad right of way or premises of the railroad and until the department has accepted the work as specified in 105.11.2.4.
- (2) Provide railroad protective liability insurance coverage written as specified in 23 CFR part 646 subpart A. Provide a separate policy for each railroad owning tracks on the project. Ensure that the railroad protective liability insurance policies provide the following minimum limits of coverage:
 - 1. Coverage A, bodily injury liability and property damage liability; \$2 million per occurrence.
 - 2. Coverage B, physical damage to property liability; \$2 million per occurrence.
 - 3. An annual aggregate amount of \$6 million that shall apply separately to each policy renewal or extension.
- (3) Obtain coverage from insurance companies licensed to do business in Wisconsin that have an A.M. Best rating of A- or better. The cost of providing the required insurance coverage and limits is incidental to the contract. The department will make no additional or special payment for providing insurance.
- (4) Submit the following to each railroad owning tracks on the project as evidence of that railroad's respective coverage:
 - 1. A certificate of insurance for the types and limits of insurance specified in 107.26.
 - 2. The railroad protective liability insurance policy or other acceptable documentation to the railroad company.
- (5) Submit the following to the region as evidence of the required coverage:
 - 1. A copy of the letter to the railroad company transmitting the submittal documents specified in 107.17.3(4).
 - 2. A certificate of insurance for the required railroad protective liability coverages.
- (6) Do not begin work on the right of way or premises of the railroad company until the region receives the submittals specified in 107.17.3(5) and notification from the railroad company that the contractor has provided sufficient insurance information to begin work.
- (7) Notify the railroad and the region immediately upon cancellation or initiating cancellation, whichever is earlier, or any material change in coverage. Cease operations within 50 feet of the railroad right of way immediately if insurance is cancelled or reduced. Do not resume operations until the required coverage is in force.

460.2.8.3.1.4 Department Verification Testing Requirements

Replace paragraph four with the following effective with the December 2012 letting:

- (4) The department will randomly test each design mixture at the following minimum frequency:
- FOR TONNAGES TOTALING:
- Less than 501 tons no tests required
- From 501 to 5,000 tons..... one test
- More than 5,000 tons..... add one test for each additional 5,000-ton increment

501.2.1 Portland Cement

Replace paragraph one with the following effective with the March 2013 letting:

- (1) Use cement conforming to ASTM specifications as follows:
- Type I portland cement; ASTM C150.
 - Type II portland cement; ASTM C150.
 - Type III portland cement; ASTM C150, for high early strength.
 - Type IP portland-pozzolan cement; ASTM C595, except maximum loss on ignition is 2.0 percent.
 - Type IS portland blast-furnace slag cement; ASTM C595.
 - Type IL portland-limestone cement; ASTM C595, except maximum nominal limestone content is 10 percent with no individual test result exceeding 12.0 percent.

501.2.5.5 Sampling and Testing

Replace the entire text with the following effective with the January 2013 letting:

- (1) Sample and test aggregates for concrete according to the following:
- | | |
|--|---------------------------|
| Sampling aggregates | AASHTO T2 |
| Lightweight pieces in aggregate | AASHTO T113 |
| Material finer than No. 200 sieve | AASHTO T11 |
| Unit weight of aggregate | AASHTO T19 |
| Organic impurities in sands | AASHTO T21 |
| Sieve analysis of aggregates | AASHTO T27 |
| Effect of organic impurities in fine aggregate | AASHTO T71 |
| Los Angeles abrasion of coarse aggregate | AASHTO T96 |
| Freeze-thaw soundness of coarse aggregate..... | AASHTO T103 |
| Sodium sulfate soundness of aggregates | AASHTO T104 |
| Specific gravity and absorption of fine aggregate | AASHTO T84 |
| Specific gravity and absorption of coarse aggregate | AASHTO T85 |
| Flat & elongated pieces based on a 3:1 ratio..... | ASTM D4791 ^[1] |
| Sampling fresh concrete | AASHTO R60 |
| Making and curing concrete compressive strength test specimens | AASHTO T23 |
| Compressive strength of molded concrete cylinders | AASHTO T22 |

^[1] As modified in CMM 8-60.

501.2.6 Fly Ash

Replace paragraph three with the following effective with the March 2013 letting:

- (3) Test fly ash using a recognized laboratory, as defined in 501.2.2(1), starting at least 30 days before its proposed use, and continuing at ASTM-required frequencies as the work progresses. The manufacturer shall test the chemical and physical properties listed in tables 1 and 2 of ASTM C618 at the frequencies and by the test methods prescribed in ASTM C311.

501.3.1.1.1 Air-Entrained Concrete

Replace paragraph one with the following effective with the March 2013 letting:

- (1) Prepare air-entrained concrete with type I, IL, II, IS, or IP cement and sufficient air-entraining admixture to produce concrete with the air content specified in 501.3.2.4.
-

501.3.1.3.2 Special Restrictions

Replace paragraph one with the following effective with the July 2013 letting:

- (1) If using coarse aggregate composed primarily of igneous or metamorphic materials, provide concrete for concrete pavement, approach slabs, barrier, surface drains, driveways, alleys, sidewalks, curb, gutter, and curb & gutter as follows:

Grade A, A-FA, A-S, and A-T : If using type II portland cement, or if using Type IL blended cement where the base portland cement meets Type II chemical requirements.

Grade A-IS and A-IP : If using type I/II blended portland cement.

Grade A-S2 : If placing by a slip-formed process and using type II portland cement.

Grade C, C-FA, C-S, C-IS, and C-IP : If using types I or III portland cement.

503.2.2 Concrete

Replace paragraph five with the following effective with the March 2013 letting:

- (5) Furnish prestressed concrete members cast from air-entrained concrete, except I-type girders may use non-air-entrained concrete. Use type I, IL, IS, , IP, II, or III cement. The contractor may replace up to 30 percent of type I, IL, II, or III cement with an equal weight of fly ash, slag, or a combination of fly ash and slag, except for prestressed box girders and slabs, the contractor shall replace 20-30 percent of the cement with fly ash, slag, or a combination of fly ash and slag. Ensure that fly ash conforms to 501.2.6 and slag conforms to 501.2.7. Use only one source and replacement rate for work under a single bid item. Use a department-approved air-entraining admixture conforming to 501.2.2 for air-entrained concrete. Use only size No. 1 coarse aggregate conforming to 501.2.5.4.
-

506.3.22 Shop Inspection

Replace paragraph one with the following effective with the July 2010 letting:

- (1) The engineer or an independent inspection agency under department contract may inspect all structural steel and miscellaneous metals furnished. The department will provide the contractor with monthly consultant inspection invoices and identify any quality deficiencies at the fabrication facility.
-

506.5 Payment

Add paragraph nine as follows effective with the June 2010 letting:

- (9) The department will limit costs for inspections conducted under 506.3.2 to \$0.05 per pound of material and deduct costs in excess of that amount from payment due the contractor. The department will determine costs for in-house inspections based on hourly rates for department staff plus overhead and use invoiced costs for contracted-out inspections. The department will administer deductions for the contractor's share of the total inspection cost under the Excess Costs For Fabrication Shop Inspection administrative item.
-

507.2.2.1 General

Replace paragraph four with the following effective with the December 2012 letting:

- (4) Ensure that there are no unsound knots or knot holes. Also ensure that there are no tight knots of a diameter exceeding one-quarter of the greater dimension at the point where they occur. Measure a knot by taking its diameter at right angles to the length of the timber. Ensure that the sum of sizes of all

knots in any one-foot length does not exceed 2 times the size of the largest allowed single knot. The engineer will treat cluster knots as if they were a single knot. A cluster knot is 2 or more knots grouped together, with the fibers of the wood deflected around the entire unit.

512.3.1 Driving and Cutting Off

Replace the entire text with the following effective with the December 2012 letting:

512.3.1.1 General

- (1) Coordinate driving operations to prevent damage or displacement of concrete in substructure units or damage to adjacent facilities due to vibrations.
- (2) Drive sheeting with a variation of 1/4 inch or less per foot from the vertical or from the batter the plans show. Ensure that the sheetpiles are within 6 inches of the plan position after driving. Do not damage sheetpiles attempting to correct for misalignment.
- (3) Remove and replace, or otherwise correct, sheetpiles the engineer deems unacceptable under 105.3. Submit details of planned corrections to the engineer for review and approval before initiating any corrective actions.
- (4) Drive sheetpiles to or beyond the required tip elevation the plans show.

512.3.1.2 Driving System

- (1) Furnish a sheetpile driving system capable of driving the sheetpiles to the required minimum tip elevation the plans show.
- (2) The engineer may order the contractor to remove a pile driving system component from service if it causes insufficient energy transfer or damages the sheetpiles. Do not return a component to service until the engineer determines that it has been satisfactorily repaired or adjusted.
- (3) Drive sheetpiles with diesel, air, steam, gravity, hydraulic, or vibratory hammers.

512.3.1.3 Cut-Offs

- (1) Cut off sheetpiles at the elevations the plans show or as the engineer directs. Pile cut-offs become the property of the contractor. Dispose of cut-offs not incorporated into the work.
-

518.2.1 General

Replace paragraph one with the following effective with the March 2013 letting:

- (1) Furnish portland cement and water as specified in 501.2. Unless the engineer allows an alternate, use either type I, IL, IS, or IP cement.
-

526.3.3 Temporary Structures

Replace paragraphs two through four with the following effective with the January 2013 letting:

- (2) Inspect temporary structures conforming to the National Bridge Inspection Standards (NBIS) and the department's structure inspection manual before opening to traffic. Perform additional inspections, as the department's structure inspection manual requires, based on structure type and time in service. Submit inspection reports on department form DT2007 to the engineer and electronic copies to the department's bureau of structures maintenance section. Ensure that a department-certified active team leader, listed online in the department's highway structures information system (HSIS), performs the inspections.
- (3) Maintain temporary structures and approaches in place until no longer needed. Unless the engineer directs otherwise, completely remove and dispose of as specified in 203.3.4. Contractor-furnished materials remain the contractor's property upon removal.

614.2.5 Wood Posts and Offset Blocks

Retitle and replace the entire text with the following effective with the July 2012 letting:

614.2.5 Posts and Offset Blocks**614.2.5.1 Wood Posts and Offset Blocks**

- (1) Furnish sawed posts and offset blocks of one of the following species:

Douglas fir	Southern pine	Ponderosa pine	Jack pine	White pine
Red pine	Western hemlock	Western larch	Hem-fir	Oak
- (2) Ensure that posts are the size the plans show and conform to the nominal and minimum dimensions tabulated in 507.2.2.3. The contractor does not have to surface the posts. Provide posts of the net length the plans show after setting and cut off.
- (3) Use stress graded posts rated at 1200 psi f_b or higher. Determine the stress grade rating for douglas fir, western larch, and southern pine as specified in 507.2.2.4.
- (4) For hem-fir, hemlock, red pine, white pine, jack pine, ponderosa pine, and oak conform to the following:

TABLE 614-1 PROPERTIES FOR WOOD POSTS AND BLOCKS

SPECIES			WESTERN HEMLOCK, HEM-FIR, RED PINE, WHITE PINE, JACK PINE, PONDEROSA PINE		OAK	
MAXIMUM SLOPE OF GRAIN			1 in 15		1 in 12	
NOMINAL WIDTH OF FACE			6"	8"	6"	8"
SHAKES, CHECKS, AND SPLITS	GREEN		1"	1 3/8"	2 3/8"	3 1/8"
	SEASONED		1 1/2"	2"	2 5/8"	3 1/2"
MAXIMUM WANE			1"	1 3/8"	1 1/8"	1 5/8"
MAXIMUM ALLOWABLE KNOTS	NARROW FACE	MIDDLE 1/3 OF LENGTH	1 3/8"	1 5/8"	2 1/8"	2 3/8"
		END ^[1]	2 3/4"	3 1/4"	4 1/4"	4 3/4"
		SUM IN MIDDLE 1/2 OF LENGTH ^[2]	11"	13"	17"	19
	WIDE FACE	EDGE KNOT N MIDDLE 1/3 OF LENGTH	1 3/8"	1 5/8"		
		EDGE KNOT AT END ^[1]	2 3/4" 7	3 1/4"		
		CENTERLINE	1 3/8"	1 7/8"	2 1/4"	2 7/8"
		SUM IN MIDDLE 1/2 OF LENGTH	5 1/2"	7 1/2"	9"	11 1/2"

^[1] But do not exceed the maximum allowable knot on the centerline of the wide face of the same piece.

^[2] But do not exceed 4 times the maximum allowable knot on the centerline of the wide face of the same piece.

- (5) Pressure treat posts and offset blocks as specified in 507.2.2.6. Use one of the oil-soluble preservatives or chromated copper arsenate conforming to 507.2.3. Use the same material for offset blocks and posts and treat material used in each continuous installation with the same type of preservative.

614.2.5.2 Steel Posts

- (1) Furnish steel posts conforming to AASHTO M270 Grade 36 and galvanized according to AASTHO M111.

614.2.5.3 Plastic Offset Blocks

- (1) Furnish plastic offset blocks from the department's approved products list.

614.3.1 General

Replace the entire text with the following effective with the July 2012 letting:

- (1) Paint the ends of cut-off galvanized posts, rail, bolts, cut or drilled surfaces of galvanized components, and areas of damaged zinc coating with 2 coats of zinc dust/zinc oxide paint. Clean the damaged and adjacent areas thoroughly before applying paint.
- (2) Apply 2 coats of wood preservative to cut surfaces of wood components. Use the same preservative originally used to treat that component or use a 2-percent solution of copper naphthenate conforming to AWWA Standard P8 or P36.

614.3.2.1 Installing Posts

Replace paragraph four with the following effective with the July 2012 letting:

- (4) Cut post tops to the finished elevation the plans show.

628.2.13 Rock Bags

Replace paragraph one with the following effective with the November 2012 letting:

- (1) Furnish rock bags made of a porous, ultraviolet resistant, high-density polyethylene or geotextile fabric that will retain 70% of its original strength after 500 hours of exposure according to ASTM D4355 and a minimum in-place filled size of 18-inches long by 12-inches wide by 6-inches high. Ensure that the fabric conforms to the following:

TEST REQUIREMENT	METHOD	VALUE
Minimum Tensile	ASTM D4632	
Machine direction		70 lb minimum
Cross direction		40 lb minimum
Elongation	ASTM D4632	
Machine direction		20% minimum
Cross direction		10 % min
Puncture	ASTM 4833	65 lbs minimum
Minimum Apparent Opening		0.0234 inches (No. 30 sieve)
Maximum Apparent Opening		0.0787 inches (No. 10 sieve)

639.2.1 General

Replace paragraph two with the following effective with the March 2013 letting:

- (2) For grout use fine aggregate conforming to 501.2.5.3 and type I, IL, IS, or IP cement.

649.3.1 General

Replace paragraphs three and four with the following effective with the March 2013 letting:

- (3) For pavements open to all traffic, apply centerline and no-passing barrier line markings as follows:
- On intermediate pavement layers, including milled surfaces, on the same day the pavement is placed or milled.
 - On the upper layer of pavement, on the same day the pavement is placed unless the contractor applies permanent marking on the same day the pavement is placed.

If weather conditions preclude same-day application, apply as soon as weather allows. Do not resume next-day construction operations until these markings are completed unless the engineer allows otherwise.

- (4) If required to apply no passing zone temporary pavement marking, reference the beginning and end of all existing no-passing barrier lines. Apply temporary no-passing barrier lines at those existing locations. If the contract contains the Locating No-Passing Zones bid item, relocate permanent no-passing zones as specified in section 648.
-

701.4.2 Verification Testing

Replace paragraph two with the following effective with the December 2012 letting:

- (2) The department will sample randomly at locations independent of the contractor's QC tests and use separate equipment and laboratories. The department will conduct a minimum of one verification test for each 5 contractor QC tests unless specific QMP provisions specify otherwise.
-

715.2.3.1 Pavements

Replace paragraph two with the following effective with the March 2013 letting:

- (2) Provide a minimum cement content of 565 pounds per cubic yard, except if using type I, IL, or III cement in a mix where the geologic composition of the coarse aggregate is primarily igneous or metamorphic materials, provide a minimum cement content of 660 pounds per cubic yard.
-

715.3.1.3 Department Verification Testing

Replace paragraph one with the following effective with the December 2012 letting:

- (1) The department will perform verification testing as specified in 701.4.2 except as follows:
- Air content, slump, and temperature: a minimum of 1 verification test per lot.
 - Compressive strength: a minimum of 1 verification test per lot.
-

Errata

Make the following corrections to the 2013 edition of the standard specifications:

102.12 Public Opening of Proposals

Correct 102.12(1) errata by changing htm to shtm in the web link.

- (1) The department will publicly open proposals at the time and place indicated in the notice to contractors. The department will post the total bid for each proposal on the Bid Express web site beginning at 9:30 AM except as specified in 102.8. If a proposal has no total bid shown, the department will not post the bid. After verification for accuracy under 103.1, the department will post bid totals on the department's HCCI web site.

<http://roadwaystandards.dot.wi.gov/hcci/bid-letting/index.shtm>

107.22 Contractor's Responsibility for Utility Facilities, Property, and Services

Correct errata by eliminating references to the department. Costs are determined by statute.

- (3) If the contractor damages or interrupts service, the contractor shall notify the utility promptly. Coordinate and cooperate with the utility in the repair of the facility. Determine who is responsible for repair costs according to Wisconsin statutes 66.0831 and 182.0175(2).

204.3.2.2 Removing Items

Correct errata by changing the reference from 490.3.2 to 490.3.

- (5) Under the Removing Asphaltic Surface Milling bid item, remove and dispose of existing asphaltic pavement or surfacing by milling at the location and to the depth the plans show. Mill the asphaltic pavement or surfacing as specified for milling salvaged asphaltic pavement in 490.3.

501.2.9 Concrete Curing Materials

Correct errata by changing AASHTO M171 to ASTM C171.

- (4) Furnish polyethylene-coated burlap conforming to ASTM C171 for white burlap-polyethylene sheets.

506.2.6.5.2 Pad Construction

Correct errata by changing ASTM A570 to ASTM A1011.

- (4) For the internal steel plates use rolled mild steel conforming to ASTM A36, or ASTM A1011 grade

512.3.3 Painting

Correct errata by changing 511.3.5 to 550.3.11.3.

- (1) Paint permanent steel sheet piling as specified for painting steel piling in 550.3.11.3.

513.2.2.8 Toggle Bolts

Correct errata by changing ASTM A570 to ASTM A1011.

- (1) Use toggle bolts made of steel, conforming to the plans. Make the assembly from the material specified below:
- | | |
|---------------------------|--|
| Toggle bolt and pin | Cold finished steel heat-treated Brinell 311-363 ASTM A354. |
| Toggle washer | Hot rolled steel ASTM A1011. Manufacturer's standard washer. |
| Spacer nut | Grade 1213, ASTM A108. Cold finished steel heat-treated ASTM A325. |

614.2.1 General

Correct errata by changing the discontinued AASHTO M298 to ASTM B695.

- (4) Furnish steel nuts conforming to ASTM A563, washers conforming to ASTM F436, grade 1, and bolts conforming to ASTM A307. Ensure that the nuts, washers, and bolts are either hot-dip coated according to AASHTO M232 class C or mechanically coated according to ASTM B695 class 50.

643.3.1 General

Correct errata by eliminating the word "continuously".

- (6) Review all traffic signs and control devices furnished and erected for location, position, visibility, adequacy, and manner of use under specific job conditions immediately after each setup and at least once every 24 hours and more frequently as necessary, to ensure all the signs and control devices are in compliance with this section. Review the signs and devices from the same direction that approaching traffic views them.

660.2.1 General

Correct errata by changing section 511 to 550.

- (1) Furnish materials conforming to the following:
- | | |
|------------------------|-------------|
| Concrete | section 501 |
| Concrete bridges | section 502 |
| Luminaires | section 659 |

Steel piling	section 550
Steel reinforcement.....	section 505

660.3.2.3 Pile Type Foundations

Correct errata by changing section 511 to 550.

- (1) Drive piles as specified in for steel piling in section 550.

701.3 Contractor Testing

Correct errata by updating AASHTO T141 to AASHTO R60 and changing AASHTO T309 to ASTM C1064.

- (1) Perform contract required QC tests for samples randomly located according to CMM 8-30. Also perform other tests as necessary to control production and construction processes, and additional testing enumerated in the contractor's quality control plan or that the engineer directs. Use test methods as follows:

TABLE 701-2 TESTING STANDARDS

TEST	TEST STANDARD
Washed P 200 analysis	AASHTO T11 ^[1]
Sieve analysis of fine and coarse aggregate	AASHTO T27 ^[1]
Aggregate moisture	AASHTO T255 ^[1]
Sampling freshly mixed concrete	AASHTO R60
Air content of fresh concrete	AASHTO T152 ^[2]
Concrete slump	AASHTO T119 ^[2]
Concrete temperature	ASTM C1064
Concrete compressive strength	AASHTO T22
Making and curing concrete cylinders	AASHTO T23
Standard moist curing for concrete cylinders	AASHTO M201

^[1] As modified in CMM 8-60.

^[2] As modified in CMM 8-70.

ADDITIONAL SPECIAL PROVISION 7

- A. Reporting 1st Tier and DBE Payments During Construction
1. Comply with reporting requirements specified in the department's Civil Rights Compliance, Contractor's User Manual, Sublets and Payments.
 2. Report payments to all DBE firms within 10 calendar days of receipt of a progress payment by the department or a contractor for work performed, materials furnished, or materials stockpiled by a DBE firm. Report the payment as specified in A(1) for all work satisfactorily performed and for all materials furnished or stockpiled.
 3. Report payments to all first tier subcontractor relationships within 10 calendar days of receipt of a progress payment by the department for work performed. Report the payment as specified in A(1) for all work satisfactorily performed.
 4. All tiers shall report payments as necessary to comply with the DBE payment requirement as specified in A(2).
 5. Require all first tier relationships, DBE firms and all other tier relationships necessary to comply with the DBE payment requirement in receipt of a progress payment by contractor to acknowledge receipt of payment as specified in A(1), (2), (3) and (4).
 6. All agreements made by a contractor shall include the provisions in A(1), (2), (3), (4) and (5), and shall be binding on all first tier subcontractor relationships and all contractors and subcontractors utilizing DBE firms on the project.
- B. Costs for conforming to this special provision are incidental to the contract.

ADDITIONAL SPECIAL PROVISION 9
Electronic Certified Payroll Submittal

(1) Use the department's Civil Rights Compliance System (CRCS) to submit certified payrolls electronically. Details are available online through the department's highway construction contractor information (HCCI) site on the Labor, Wages, and EEO Information page at: <http://roadwaystandards.dot.wi.gov/hcci/labor-wages-eeo/index.shtm>

(2) Ensure that all tiers of subcontractors, as well as all trucking firms, submit their weekly certified payrolls electronically through CRCS. These payrolls are due within seven calendar days following the close of the payroll period. Every firm providing physical labor towards completing the project is a subcontractor under this special provision.

(3) Upon receipt of contract execution, promptly make all affected firms aware of the requirements under this special provision and arrange for them to receive CRCS training as they are about to begin payrolls. The department will provide training either in a classroom setting at one of our regional offices or by telephone. Contact Tess Mulrooney at 608-267-4489 to schedule the training.

(4) The department will reject all paper submittals of forms DT-1816 and DT-1929 for information required under this special provision. All costs for conforming to this special provision are incidental to the contract.

(5) Firms wishing to export payroll data from their computer system into CRCS should have their payroll coordinator send several sample electronic files to Tess two months before a payroll needs to be submitted. Not every contractor's payroll system is capable of producing export files. For details, see pages 17-22 of the CRCS System Background Information manual available online on the Labor, Wages, and EEO Information page at: <http://roadwaystandards.dot.wi.gov/hcci/labor-wages-eeo/crc-basic-info.pdf>

Effective with September 2004 Letting

**WISCONSIN DEPARTMENT OF TRANSPORTATION
DIVISION OF HIGHWAYS AND TRANSPORTATION FACILITIES**

SUPPLEMENTAL REQUIRED CONTRACT PROVISIONS

- I. Wage Rates, Hours of labor and payment of Wages
- II. Payroll Requirements
- III. Postings at the Site of the Work
- IV. Affidavits
- V. Wage Rate Redistribution
- VI. Additional Classifications

I. WAGE RATES, HOURS OF LABOR AND PAYMENT OF WAGES

The schedule of "Minimum Wage Rates" attached hereto and made a part hereof furnishes the prevailing wage rates that have been determined pursuant to Section 103.50 of the Wisconsin Statutes. These wage rates are the minimum required to be paid to the various laborers, workers, mechanics and truck drivers employed by contractors and subcontractors on the construction work embraced by the contract and subject to prevailing hours and wages under Section 103.50, Stats. If necessary to employ laborers, workers, mechanics or truck drivers whose classification is not listed on the schedule, they shall be paid at rates conformable to those listed for similar classifications. Apprentices shall be paid at rates not less than those prescribed in their state indenture contracts.

While the wage rates shown are the minimum rates required by the contract to be paid during its life, this is not a representation that labor can be obtained at these rates. It is the responsibility of bidders to inform themselves as to the local labor conditions and prospective changes or adjustments of wage rates. No increase in the contract price shall be allowed or authorized on account of the payment of wage rates in excess of those listed herein.

Pursuant to Section 103.50 of the Wisconsin Statutes, the prevailing hours of labor have been determined to be up to 10 hours per day and 40 hours per calendar week Monday through Friday. If any laborer, worker, mechanic or truck driver is permitted or required to work more than the prevailing number of hours per day or per calendar week on this contract, they shall be paid for all hours in excess of the prevailing hours at a rate of at least one and one-half (1 1/2) times their hourly rate of pay. All work on Saturday, Sunday and the following holidays is to be paid at time and a half: (1) January 1, (2) the last Monday in May, (3) July 4, (4) the first Monday in September, (5) the fourth Thursday in November, (6) December 25, (7) the day before if January 1, July 4 or December 25 falls on a Saturday and (8) the day following if January 1, July 4 or December 25 falls on a Sunday.

All laborers, workers, mechanics and truck drivers shall be paid unconditionally not less often than once a week. Persons who own and operate their own trucks must receive the prevailing truck driver rate for the applicable type of truck (i.e. 2 axle, 3 or more axle, articulated, eculid or dumptor) he or she operates, plus an agreed upon amount for the use of his or her truck. Every owner-operator MUST be paid separately for their driving and for the use of their truck.

For those projects subject to the requirements of the Davis-Bacon Act, the Secretary of Labor will also have determined "Minimum Wage Rates" for work to be performed under the contract. These rates are, for all or most of the labor, worker, mechanic or truck driver classifications, identical to those established under Section 103.50 of the Wisconsin Statutes. In the event the rates are not identical, the higher of the two rates will govern.

II. PAYROLL REQUIREMENTS

All contractors and subcontractors must submit weekly Certified Payrolls and Compliance Statement verifying that all laborers, workers, mechanics and truck drivers working on the project have been paid the prevailing wage rates for all work performed under the contract required by Section 103.50 of the Wisconsin Statutes.

III. POSTINGS AT THE SITE OF THE WORK

In addition to the required postings furnished by the Department, the contractor shall post the following in at least one conspicuous place at the site of work:

- a. "NOTICE TO EMPLOYEES," which provides information required to be posted by the provisions of Section 103.50 of the Wisconsin Statutes.
- b. A copy of the State of Wisconsin Minimum Wages Rates. (Four pages.)
- c. A copy of the contractor's Equal Employment Opportunity Policy.
- d. On any project involving federal aid, in addition to the furnished postings, the contractor shall post a copy of the "Davis-Bacon Act, Minimum Wage Rates". (Three pages.)

IV. WAGE RATE REDISTRIBUTION

The amount specified as the hourly basic rate of pay and the amount(s) specified as the fringe benefit contribution(s), for all classes of laborers, workers, mechanics or truck drivers may be redistributed, when necessary, to conform to those specified in any applicable collective bargaining agreement, provided that both parties to such agreement

request and receive the approval for any such redistribution from both the Department of Transportation and the Department of Workforce Development prior to the implementation of such redistribution.

V. ADDITIONAL CLASSIFICATIONS

Any unlisted laborer or mechanic classification that is needed to perform work on this project, and is not included within the scope of any of the classifications listed in the application prevailing wage rate determination, may be added after award only if all of the following criteria have been met:

1. The affected employer(s) must make a written request to WisDOT Central Office to utilize the unlisted classification on this project.
2. The request must indicate the scope of the work to be performed by the unlisted classification and must indicate the proposed wage/fringe benefit package that the unlisted classification is to receive.
3. The work to be performed by the unlisted classification must not be performed by a classification that is included in the applicable prevailing wage rate determination.
4. The unlisted classification must be commonly employed in the area where the project is located.
5. The proposed wage/fringe benefit package must bear a reasonable relationship to those set forth in the applicable prevailing wage rate determination.
6. The request should be made prior to the actual performance of the work by the unlisted classification.
7. DWD must approve the use of the unlisted classification and the proposed wage/fringe benefit package. USDOL also must approve the use of the unlisted classification and the proposed wage/fringe benefit package on federal aid projects.
8. WisDOT and DWD may amend the proposed wage/fringe benefit package, as deemed necessary, and may set forth specific employment ratios and scope of work requirements in the approval document.

The approved wage/fringe benefit package shall be paid to all laborers, workers, mechanics or truck drivers performing work within the scope of that performed by the unlisted classification, from the first day on which such work is performed. In the event that work is performed by the unlisted classification prior to approval, the wage/fringe benefit package to be paid for such work must be in conformance with the wage/fringe

benefit package approved for such work. Under this arrangement a retroactive adjustment in wages and/or fringe benefits may be required to be made to the affected laborers, workers, mechanics or truck drivers by the affected employer(s).

**ANNUAL PREVAILING WAGE RATE DETERMINATION
FOR ALL STATE HIGHWAY PROJECTS
JUNEAU COUNTY**

Compiled by the State of Wisconsin - Department of Workforce Development
for the Department of Transportation
Pursuant to s. 103.50, Stats.
Issued on May 1, 2013

CLASSIFICATION: Contractors are required to call the Department of Workforce Development if there are any questions regarding the proper trade or classification to be used for any worker on a public works project.

OVERTIME: Time and one-half must be paid for all hours worked over 10 hours per day and 40 hours per calendar week and for all hours worked on Saturday, Sunday and the following six (6) holidays: January 1; the last Monday in May; July 4; the 1st Monday in September; the 4th Thursday in November; December 25; the day before if January 1, July 4 or December 25 falls on a Saturday; the day following if January 1, July 4 or December 25 falls on a Sunday.

FUTURE INCREASE: If indicated for a specific trade or occupation, the full amount of such increase MUST be added to the "TOTAL" indicated for such trade or occupation on the date(s) such increase(s) becomes effective.

PREMIUM PAY: If indicated for a specific trade or occupation, the full amount of such pay MUST be added to the "HOURLY BASIC RATE OF PAY" indicated for such trade or occupation, whenever such pay is applicable.

SUBJOURNEY: Wage rates may be available for some of the classifications indicated below. Any employer that desires to use any subjourney classification on a project MUST request the applicable wage rate from the Department of Workforce Development PRIOR to the date such classification is used on such project. Form ERD-10880 is available for this purpose and can be obtained by writing to the Department of Workforce Development, Equal Rights Division, P.O. Box 8928, Madison, WI 53708.

<u>TRADE OR OCCUPATION</u>	<u>HOURLY BASIC RATE OF PAY</u>	<u>HOURLY FRINGE BENEFITS</u>	<u>TOTAL</u>

DEPARTMENTAL ORDER

ISSUE DATE: 5/16/2013

PROJECT:

MAUSTON-WI DELLS, SAFETY REST AREAS 9 & 10, FACILITY UPGRADES
KILDARE TOWN, JUNEAU COUNTY, WI
Determination No. 201301461 [Owner Project No. 1030-31-72]

PROJECT OWNER:

ROBERT SPOERL, ROADSIDE FACILITIES ENGINEER
WI DEPT OF TRANSPORTATION
PO BOX 7986
4802 SHEBOYGAN AVE, RM 501
MADISON, WI 53707

REQUESTER:

KEITH KOSBAU, PROJECT MANAGER
MEAD & HUNT INC
6501 WATTS RD
MADISON, WI 53719

ADDITIONAL CONTACT:

ROBERT SPOERL, ROADSIDE FACILITIES ENGINEER
WI DEPT OF TRANSPORTATION
PO BOX 7986
4802 SHEBOYGAN AVE, RM 501
MADISON, WI 53707

NOTE: The Requester must provide a copy of this Project Determination and enclosures to the Project Owner and Additional Contact.

The department received an application for prevailing wage rate determination for the above-captioned project. The department conducted a survey to determine the prevailing wage rate for the trade(s) or occupation(s) needed to complete the project. The survey's findings appear in the attached project determination.

If you believe that the wage rate for any trade or occupation does not accurately reflect the prevailing wage rate in the city, village or town where the project is located, you may ask the department to conduct an administrative review of such wage rate. You must submit this request in writing within 30 days from the date indicated above. Additionally, your request must include wage rate information from at least three similar projects in the city, village or town where the proposed project is located and on which some work has been performed by the contested trade(s) during the current survey period and was previously considered by the department in issuing the attached determination. See DWD 290.10 of the Wisconsin Administrative Code and either s. 66.0903(3)(br), s. 66.0904(4)(e), or s. 103.49(3)(c), Stats., for a complete explanation of the administrative review process.

Enclosures

It is hereby ordered that the prevailing wage rates set forth in the attached project determination shall only be applicable to the above referenced project. This order is a **FINAL ORDER** of the department unless a timely request for an administrative review is filed with the department.

PREVAILING WAGE RATE DETERMINATION

Issued by the State of Wisconsin Department of
Workforce Development Pursuant to s. 103.49,
Wis. Stats.

Issued On: 5/16/2013

DETERMINATION NUMBER: 201301461

EXPIRATION DATE: Prime Contracts MUST Be Awarded or Negotiated On Or Before
12/31/2013. If NOT, You MUST Reapply.

PROJECT NAME: MAUSTON-WI DELLS, SAFETY REST AREAS 9 & 10, FACILITY UPGRADES

PROJECT NO: 1030-31-72

PROJECT LOCATION: KILDARE TOWN, JUNEAU COUNTY, WI

CONTRACTING AGENCY: WI DEPT OF TRANSPORTATION

CLASSIFICATION: Contractors are responsible for correctly classifying their workers. Either call the Department of Workforce Development (DWD) with trade or classification questions or consult DWD's Dictionary of Occupational Classifications & Work Descriptions on the DWD website at:
dwd.wisconsin.gov/er/prevailing_wage_rate/Dictionary/dictionary_main.htm.

OVERTIME: Time and one-half must be paid for all hours worked:

- over 10 hours per day on prevailing wage projects
- over 40 hours per calendar week
- Saturday and Sunday
- on all of the following holidays: January 1; the last Monday in May; July 4;
the 1st Monday in September; the 4th Thursday in November; December
25;
- The day before if January 1, July 4 or December 25 falls on a Saturday;
- The day following if January 1, July 4 or December 25 falls on a Sunday.

Apply the time and one-half overtime calculation to whichever is higher between the Hourly Basic Rate listed on this project determination or the employee's regular hourly rate of pay. Add any applicable Premium or DOT Premium to the Hourly Basic Rate before calculating overtime.

A DOT Premium (discussed below) may supersede this time and one-half requirement.

FUTURE INCREASE: When a specific trade or occupation requires a future increase, you MUST add the full hourly increase to the "TOTAL" on the effective date(s) indicated for the specific trade or occupation.

PREMIUM PAY: If indicated for a specific trade or occupation, the full amount of such pay MUST be added to the "HOURLY BASIC RATE OF PAY" indicated for such trade or occupation, whenever such pay is applicable.

DOT PREMIUM: This premium only applies to highway and bridge projects owned by the Wisconsin Department of Transportation and to the project type heading "Airport Pavement or State Highway Construction." DO NOT apply the premium calculation under any other project type on this determination.

APPRENTICES: Pay apprentices a percentage of the applicable journey person's hourly basic rate of pay and hourly fringe benefit contributions specified in this determination. Obtain the appropriate percentage from each apprentice's contract or indenture.

SUBJOURNEY: Subjourney wage rates may be available for some of the trades or occupations indicated below with the exception of laborers, truck drivers and heavy equipment operators. Any employer interested in using a subjourney classification on this project MUST complete Form ERD-10880 and request the applicable wage rate from the Department of Workforce Development PRIOR to using the subjourney worker on this project.

This document **MUST BE POSTED** by the **CONTRACTING AGENCY** in at least one conspicuous and easily accessible place **on the site of the project**. A local governmental unit may post this document at the place normally used to post public notices if there is no common site on the project. This document **MUST** remain posted during the entire time any worker is employed on the project and **MUST** be physically incorporated into the specifications and all contracts and subcontracts. If you have any questions, please write to the Equal Rights Division, Labor Standards Bureau, P.O. Box 8928, Madison, Wisconsin 53708 or call (608) 266-6861.

The following statutory provisions apply to state agency projects of public works and are set forth below pursuant to the requirements of s. 103.49(3)(a), Stats.

s. 103.49 (1) (c) "PREVAILING HOURS OF LABOR" for any trade or occupation in any area means 10 hours per day and 40 hours per week and may not include any hours worked on a Saturday or Sunday or on any of the following holidays:

1. January 1.
2. The last Monday in May.
3. July 4.
4. The first Monday in September.
5. The 4th Thursday in November.
6. December 25.
7. The day before if January 1, July 4 or December 25 falls on a Saturday.
8. The day following if January 1, July 4 or December 25 falls on a Sunday.

s. 103.49 (2) PREVAILING WAGE RATES AND HOURS OF LABOR.

Any contract made for the erection, construction, remodeling, repairing, or demolition of any project of public works to which the state or any state agency is a party shall contain a stipulation that no person performing the work described in sub. (2m) may be permitted to work a greater number of hours per day or per week than the prevailing hours of labor, except that any such person may be permitted or required to work more than such prevailing hours of labor per day and per week if he or she is paid for all hours worked in excess of the prevailing hours of labor at a rate of at least 1.5 times his or her hourly basic rate of pay; nor may he or she be paid less than the prevailing wage rate determined under sub. (3) in the same or most similar trade or occupation in the area in which the project of public works is situated. A reference to the prevailing wage rates determined under sub. (3) and the prevailing hours of labor shall be published in the notice issued for the purpose of securing bids for the project. If any contract or subcontract for a project of public works that is subject to this section is entered into, the prevailing wage rates determined under sub. (3) and the prevailing hours of labor shall be physically incorporated into and made a part of the contract or subcontract, except that for a minor subcontract, as determined by the department, the department shall prescribe by rule the method of notifying the minor subcontractor of the prevailing wage rates and prevailing hours of labor applicable to the minor subcontract. The prevailing wage rates and prevailing hours of labor applicable to a contract or subcontract may not be changed during the time that the contract or subcontract is in force.

s. 103.49 (6M) LIABILITY AND PENALTIES.

- (ag) 1. Any contractor, subcontractor, or contractor's or subcontractor's agent who fails to pay the prevailing wage rate determined by the department under sub. (3) or who pays less than 1.5 times the hourly basic rate of pay for all hours worked in excess of the prevailing hours of labor is liable to any affected employee in the amount of his or her unpaid wages or his or her unpaid overtime compensation and in an additional amount as liquidated damages as provided in subd. 2., 3., whichever is applicable.
2. If the department determines upon inspection under sub. (5) (b) or (c) that a contractor, subcontractor, or contractor's or subcontractor's agent has failed to pay the prevailing wage rate determined by the department under sub. (3) or has paid less than 1.5 times the hourly basic rate of pay for all hours worked in excess of the prevailing hours of labor, the department shall order the contractor to pay to any affected employee the amount of his or her unpaid wages or his or her unpaid overtime compensation and an additional amount equal to 100 percent of the amount of those unpaid wages or that unpaid overtime compensation as liquidated damages within a period specified by the department in the order.
3. In addition to or in lieu of recovering the liability specified in subd. 1. as provided in subd. 2., any employee for and in behalf of that employee and other employees similarly situated may commence an action to recover that liability in any court of competent jurisdiction. If the court finds that a contractor, subcontractor, or contractor's or subcontractor's agent has failed to pay the prevailing wage rate determined by the department under sub. (3) or has paid less than 1.5 times the hourly basic rate of pay for all hours worked in excess of the prevailing hours of labor, the court shall order the contractor, subcontractor, or agent to pay to any affected employee the amount of his or her unpaid wages or his or her unpaid overtime compensation and an additional amount equal to 100 percent of the amount of those unpaid wages or that unpaid overtime compensation as liquidated damages.

5. No employee may be a party plaintiff to an action under subd. 3. unless the employee consents in writing to become a party and the consent is filed in the court in which the action is brought. Notwithstanding s. 814.04 (1), the court shall, in addition to any judgment awarded to the plaintiff, allow reasonable attorney fees and costs to be paid by the defendant.

(am) Except as provided in pars. (b), (d) and (f), any contractor, subcontractor or contractor's or subcontractor's agent who violates this section may be fined not more than \$200 or imprisoned for not more than 6 months or both. Each day that a violation continues is a separate offense.

(b) Whoever induces any person who seeks to be or is employed on any project of public works that is subject to this section to give up, waive, or return any part of the wages to which the person is entitled under the contract governing the project, or who reduces the hourly basic rate of pay normally paid to a person for work on a project that is not subject to this section during a week in which the person works both on a project of public works that is subject to this section and on a project that is not subject to this section, by threat not to employ, by threat of dismissal from employment, or by any other means is guilty of an offense under s. 946.15 (1).

(c) Any person employed on a project of public works that is subject to this section who knowingly permits a contractor, subcontractor, or contractor's or subcontractor's agent to pay him or her less than the prevailing wage rate set forth in the contract governing the project, who gives up, waives, or returns any part of the compensation to which he or she is entitled under the contract, or who gives up, waives, or returns any part of the compensation to which he or she is normally entitled for work on a project that is not subject to this section during a week in which the person works both on a project of public works that is subject to this section and on a project that is not subject to this section, is guilty of an offense under s. 946.15 (2).

(d) Whoever induces any person who seeks to be or is employed on any project of public works that is subject to this section to permit any part of the wages to which the person is entitled under the contract governing the project to be deducted from the person's pay is guilty of an offense under s. 946.15 (3), unless the deduction would be permitted under 29 CFR 3.5 or 3.6 from a person who is working on a project that is subject to 40 USC 3142.

(e) Any person employed on a project of public works that is subject to this section who knowingly permits any part of the wages to which he or she is entitled under the contract governing the project to be deducted from his or her pay is guilty of an offense under s. 946.15 (4), unless the deduction would be permitted under 29 CFR 3.5 or 3.6 from a person who is working on a project that is subject to 40 USC 3142.

BUILDING OR HEAVY CONSTRUCTION

Includes sheltered enclosures with walk-in access for the purpose of housing persons, employees, machinery, equipment or supplies and non-sheltered work such as canals, dams, dikes, reservoirs, storage tanks, etc. A sheltered enclosure need not be "habitable" in order to be considered a building. The installation of machinery and/or equipment, both above and below grade level, does not change a project's character as a building. On-site grading, utility work and landscaping are included within this definition. Residential buildings of four (4) stories or less, agricultural buildings, parking lots and driveways are NOT included within this definition.

	Summary of Prevailing Wage Law Changes Effective July 1, 2011	Information for public entity or any other interested party	4

09/01/12

POST THE WHITE SHEET

As the public entity receiving this prevailing wage rate determination, YOU ARE REQUIRED by law to post the prevailing wage rate determination (i.e., white sheet) in at least one conspicuous and easily accessible place on the project site that is available to all construction workers. The white sheet must remain posted from the onset of the project until all construction labor on the project has been completed.

[See, Wis. Admin. Code §DWD 290.12(1)]

Posting the white sheet inside the general contractor's trailer does not meet this requirement. That placement is not available/accessible to all workers and is not a location over which you have control.

If you have questions about posting, please call (608)266-6861 and ask for prevailing wage intake.

Disclaimer

Employers performing work on public works and publicly funded private construction projects in Wisconsin are required to have a written substance abuse testing program in place. The provisions of this requirement are contained in Sec. 103.503, Wis. Stats. The Department of Workforce Development is neither responsible for enforcement of this law nor authorized to answer questions concerning its provisions. For legal advice on complying with Sec. 103.503, Wis. Stats., you may wish to consult with a private attorney.

103.503 Substance abuse prevention on public works and publicly funded projects. (1) DEFINITIONS. In this section:

(a) "Accident" means an incident caused, contributed to, or otherwise involving an employee that resulted or could have resulted in death, personal injury, or property damage and that occurred while the employee was performing the work described ins. 66.0903 (4), 66.0904 (3), or 103.49 (2m) on a project.

(b) "Alcohol" has the meaning given ins. 340.01 (1q).

(c) "Contracting agency" means a local governmental unit, as defined ins. 66.0903 (1) (d), a state agency, as defined ins. 103.49 (1) (f), or an owner or developer under s. 66.0904 that has contracted for the performance of work on a project.

(d) "Drug" means any controlled substance, as defined ins. 961.01 (4), or controlled substance analog, as defined ins. 961.01 (4m), for which testing is required by an employer under its substance abuse prevention program under this section.

(e) "Employee" means a laborer, worker, mechanic, or truck driver who performs the work described ins. 66.0903 (4), 66.0904 (3), or 103.49 (2m) on a project.

(f) "Employer" means a contractor, subcontractor, or agent of a contractor or subcontractor that performs work on a project.

(g) "Project" means a project of public works that is subject to s. 66.0903 or 103.49 or a publicly funded private construction project that is subject to s. 66.0904.

(2) SUBSTANCE ABUSE PROHIBITED. No employee may use, possess, attempt to possess, distribute, deliver, or be under the influence of a drug, or use or be under the influence of alcohol, while performing the work described ins. 66.0903 (4), 66.0904 (3), or 103.49 (2m) on a project. An employee is considered to be under the influence of alcohol for purposes of this subsection if he or she has an alcohol concentration that is equal to or greater than the amount specified ins. 885.235 (1g) (d).

(3) SUBSTANCE ABUSE PREVENTION PROGRAMS REQUIRED. (a) Before an employer may commence work on a project, the employer shall have in place a written program for the prevention of substance abuse among its employees. At a minimum, the program shall include all of the following:

1. A prohibition against the actions or conditions specified in sub. (2).

2. A requirement that employees performing the work described ins. 66.0903 (4), 66.0904 (3), or 103.49 (2m) on a project submit to random, reasonable suspicion, and post-accident drug and alcohol testing and to drug and alcohol testing before commencing work on a project, except that testing of an employee before commencing work on a project is not required if the employee has been participating in a random testing program during the 90 days preceding the date on which the employee commenced work on the project.

3. A procedure for notifying an employee who violates sub. (2), who tests positive for the presence of a drug in his or her system, or who refuses to submit to drug or alcohol testing as required under the program that the employee may not perform work on a project until he or she meets the conditions specified in sub. (4) (b) 1. and 2.

(b) Each employer shall be responsible for the cost of developing, implementing, and enforcing its substance abuse prevention program, including the cost of drug and alcohol testing of its employees under the program. The contracting agency is not responsible for that cost, for the cost of any medical review of a test result, or for any rehabilitation provided to an employee.

(4) EMPLOYEE ACCESS TO PROJECT. (a) No employer may permit an employee who violates sub. (2), who tests positive for the presence of a drug in his or her system, or who refuses to submit to drug or alcohol testing as required under the employer's substance abuse prevention program under sub. (3) to perform work on a project until he or she meets the conditions specified in par. (b) 1. and 2. An employer shall immediately remove an employee from work on a project if any of the following occurs:

1. The employee violates sub. (2), tests positive for the presence of a drug in his or her system, or refuses to submit to drug or alcohol testing as required under the employer's substance abuse prevention program.

2. An officer or employee of the contracting agency has a reasonable suspicion that the employee is in violation of sub. (2) and requests the employer to immediately remove the employee from work on the project.

(b) An employee who is barred or removed from work on a project under par. (a) may commence or return to work on the project upon his or her employer providing to the contracting agency documentation showing any of the following:

1. That the employee has tested negative for the presence of drugs in his or her system and is not under the influence of alcohol as described in sub. (2).

2. That the employee has been approved to commence or return to work on the project in accordance with the employer's substance abuse prevention program.

(c) Testing for the presence of drugs or alcohol in an employee's system and the handling of test specimens shall be conducted in accordance with guidelines for laboratory testing procedures and chain-of-custody procedures established by the substance abuse and mental health services administration of the federal department of health and human services.

(5) LOCAL ORDINANCES; STRICT CONFORMITY REQUIRED. A local governmental unit, as defined ins. 66.0903 (1) (d), may enact an ordinance regulating the conduct regulated under this section only if the ordinance strictly conforms to this section.

History: 2005 a. 181; 2009 a. 28.

Consolidated List of Debarred Contractors
Prepared and Issued By
State of Wisconsin
Department of Workforce Development

September 1, 2012

This list has been prepared in accordance with the provisions of s. 66.0903(12), s. 66.0904(10) and s. 103.49(7), Stats. and Chapter DWD 294 of the Wisconsin Administrative Code. All contractors on this list were found to have committed a "debarable offense" related to certain labor standard provisions determined or established for a state or local public works project or publicly funded private construction project. No state agency, local governmental unit or owner or developer may knowingly solicit bids from, negotiate with or award any contracts to or approve or allow any subcontracts with a debarred contractor, including all divisions, affiliates or other organizational elements of such contractor that are engaged in construction business activities, until the debarment is terminated. The name of each debarred contractor must remain on this list for a period of three (3) years from the termination date indicated below. The contractor is, however, only "debarred" from the "effective date" through the "termination date" indicated for that contractor. Questions regarding this list should be addressed to Julie Eckenwalder, Equal Rights Division, P. O. Box 8928, Madison, WI 53708 or call (608) 266-3148. Deaf, hearing or speech-impaired callers may contact the department by calling its TDD number (608) 264-8752.

Disclosure of Ownership

The statutory authority for the use of this form is prescribed in Sections 66.0903(12)(d), 66.0904(10)(d) and 103.49(7)(d), Wisconsin Statutes.

The use of this form is mandatory. The penalty for failing to complete this form is prescribed in Section 103.005(12), Wisconsin Statutes.

Personal information you provide may be used for secondary purposes [Privacy Law, s. 15.04(1) (m), Wisconsin Statutes]

- (1) On the date a contractor submits a bid to or completes negotiations with a state agency, local governmental unit, or developer, investor or owner on a project subject to Section 66.0903, 66.0904 or 103.49, Wisconsin Statutes, the contractor shall disclose to such state agency, local governmental unit, or developer, investor or owner, the name of any "other construction business", which the contractor, or a shareholder, officer or partner of the contractor, owns or has owned within the preceding three (3) years.
- (2) The term "other construction business" means any business engaged in the erection, construction, remodeling, repairing, demolition, altering or painting and decorating of buildings, structures or facilities. It also means any business engaged in supplying mineral aggregate, or hauling excavated material or spoil as provided by Sections 66.0903(3), 66.0904(2), 103.49(2) and 103.50(2), Wisconsin Statutes.
- (3) This form must ONLY be filed, with the state agency project owner, local governmental unit project owner, or developer, investor or owner of a publicly funded private construction project that will be awarding the contract, if both (A) and (B) are met.
 - (A) The contractor, or a shareholder, officer or partner of the contractor:
 - (1) Owns at least a 25% interest in the "other construction business", indicated below, on the date the contractor submits a bid or completes negotiations.
 - (2) Or has owned at least a 25% interest in the "other construction business" at any time within the preceding three (3) years.
 - (B) The Wisconsin Department of Workforce Development (DWD) has determined that the "other construction business" has failed to pay the prevailing *wage* rate or time and one-half the required hourly basic rate of pay, for

Request to Employ Subjourneyperson

The use of this form is mandatory. The penalty for failing to complete this form is prescribed in Section 103.005(12), Wisconsin Statutes.

Personal information you provide may be used for secondary purposes (Privacy Law, s. 15.04(1)(m), Wisconsin Statutes).

The employer indicated below requests that the Department of Workforce Development (DWD) determine the prevailing wage rate(s) and related qualifications to enable such employer to use a subjourneyperson(s) on the following prevailing wage project, in accordance with the provisions of Section DWD 290.025, Wisconsin Administrative Code.

1. Name of Project Appearing on the Project Determination			
County		City, Village or Town	
DWD Project Determination Number		Project Number (if applicable)	
2. Job Classification(s) for which you request a subjourney rate (i.e., carpenter, electrician, plumber, etc.)			
a.		b.	
c.		d.	
3. Employer Name (Print)		Requester Name (Print)	
Address		City	State Zip Code
Telephone Number ()		Requester Title	
Email address (if you prefer to receive your response via email)		Fax Number (if you prefer to receive your response via fax) ()	

READ CAREFULLY: I understand that this request is ONLY applicable to the project and job classification(s) listed above and that subjourney employees primarily work under the direction of and assist a skilled trade employee by frequently using the tools of a skilled trade and will NOT regularly perform the duties of a general laborer, heavy equipment operator or truck driver. If the subjourney employee regularly performs the work of a different trade or occupation, he/she will be compensated for such work at the applicable journeyperson prevailing wage rate. I agree to compensate subjourneyperson employees in strict accordance with the directions received from the DWD.

Call (608) 266-6861 for assistance in completing this form.

PREVAILING WAGE- Public Entity Project Owners

Any public works project that has a total estimated project cost that equals or exceeds single-trade or multiple-trade project thresholds requires a prevailing wage rate determination issued by the Department of Workforce Development (DWD). Public works include erecting, constructing, remodeling, repairing, demolishing, alterations, painting and decorating projects for a local governmental unit or state agency. State law excludes minor service or maintenance work, warranty work, or work under a supply-and-installation contract. There is a statutory definition for each of these exclusions. The prevailing wage law that applies to local governmental units is §66.0903, Wis. Stats. The prevailing wage law that applies to state agencies is §103.49, Wis. Stats. The applicable administrative rules for all public entities are DWD 290 and DWD 294, Wis. Adm. Code.

Thresholds

A "single-trade project of public works" means a project in which a single trade accounts for 85% or more of the total labor cost of the project. The single trade threshold is \$48,000.

A "multiple-trade project of public works" means a project in which no single trade accounts for 85% or more of the total labor cost of the project.

- (a) The multiple-trade threshold is \$100,000, unless a municipality falls under the description in
- (b).
- (b) The multiple-trade threshold of \$234,000 applies to public works projects erected, constructed, repaired, remodeled, or demolished by a private contractor for •a city or village with a population less than 2500 or •a town.

Effective July 1, 2011, a local governmental unit or state agency that has a public works project that equals or exceeds the prevailing wage thresholds must do all of the following:

- Request a prevailing wage rate determination for the project from DWD at least 30 days before soliciting bids or negotiating contracts. An Application for Prevailing Wage Rate Determination is available on the DWD website: http://jdwd.wisconsin.gov/er/prevailing_wage_rate/default.htm

To avoid waiting for a project determination use the on-line application system that permits the user to generate a determination immediately and save all documents in PDF form to the user's computer. Use this project determination on line application at the following address:

http://dwd.wisconsin.gov/er/prevaling_wage_rate/pw_online_determinations.htm

- Tell potential contractors the project is subject to state prevailing wage law when soliciting bids.
- Include the prevailing wage rate determination in the construction contract, or if there is no written contract, provide a copy of the project determination to each prime contractor.
- Award contracts to contractors who do *not* appear on the "Consolidated List of Debarred Contractors."
- Post the prevailing wage rate determination on the project site. (This document is often referred to as "the white sheet.")
- Notify project contractors that if DWD finds that a contractor violated the prevailing wage law, DWD will assess liquidated damages of 100% of the wages owed to employees.
- Obtain an Affidavit of Compliance from each prime contractor before making final payment for the project.

If the total estimated cost of the project exceeds the prevailing wage thresholds, a local governmental unit or state agency also must obtain a prevailing wage rate determination under the following circumstances:

- when a completed facility is leased, purchased, lease-purchased or otherwise acquired by or dedicated to a public entity in lieu of the public entity contracting for the project,
- when one public entity does work for another public entity,
- when a *private* entity will construct a road, street, bridge, sanitary sewer or water main project and dedicate it to a local governmental unit or the state for its ownership or maintenance (except for some residential subdivisions).

For more information, visit the prevailing wage website: http://dwd.wisconsin.gov/er/prevaling_wage_rate/default.htm. For further assistance, call the Equal Rights Division at 608-266-6861 and ask for prevailing wage.

PREVAILING WAGE- Contractors

Any public works project that has a total estimated project cost that equals or exceeds prevailing wage project thresholds requires a prevailing wage rate determination issued by the Department of Workforce Development (DWD). Public works include erecting, constructing, remodeling, repairing, demolishing, alterations, painting and decorating projects for a local governmental unit or state agency. State law excludes minor service or maintenance work, warranty work, or work under a supply-and-installation contract. There is a statutory definition for each of these exclusions. The prevailing wage law that applies to local governmental units and their contractors is §66.0903, Wis. Stats. The prevailing wage law that applies to state agencies and their contractors is §103.49, Wis. Stats. The applicable administrative rules for all prevailing wage projects are DWD 290 and DWD 294, Wis. Adm. Code. These laws include provisions that apply to all contractors and subcontractors working on prevailing wage projects.

Effective July 1, 2011, any contractor or subcontractor working on a local governmental unit or state agency's public works project that equals or exceeds current prevailing wage project thresholds must do all of the following:

- Receive and review the project's prevailing wage rate determination (i.e., white sheet).
- Tell subcontractors the project is subject to state prevailing wage law and include the prevailing wage rate determination in the construction contract, or if there is no written contract, provide a copy of the project determination to each subcontractor.
- Hire subcontractors who do *not* appear on the "Consolidated List of Debarred Contractors."
- Notify subcontractors that if DWD finds that a contractor or subcontractor violated the prevailing wage law, DWD will assess liquidated damages of 100% of the wages owed to employees.

- Apply to DWD for subjourney wage rates prior to employing these individuals on the project.
- Receive and retain a completed Affidavit of Compliance from each subcontractor brought on to the project before providing final payment to those subcontractors.
- Submit a completed Affidavit of Compliance to the contractor who brought the subcontractor on to the project before receiving final payment for the project.
- Maintain payroll records for 3 years that comply with §§66.0903(10)(a) or 103.49(5)(a), Stats. and DWD 274.06.
- Respond to requests from DWD or the project owner to provide payroll records and/or respond to prevailing wage complaints filed by employees or third parties.

For more information, visit the prevailing wage website: http://jdwd.wisconsin.gov/er/prevailing_wage_rate/default.htm. For further assistance, call the Equal Rights Division at 608-266-6861 and ask for prevailing wage.

SUMMARY OF PREVAILING WAGE LAW CHANGES EFFECTIVE JULY 1, 2011

document 07/27/11)

For further updates on this topic, refer to the prevailing wage website at:

http://dwd.wisconsin.gov/er/prevailing_wage_rate/default.htm

The recently approved State budget bill (2011 Wisconsin Act 40) includes major changes to prevailing wage laws (§§66.0903, 66.0904, 103.49 & 103.50, Wis. Stats.) effective JULY 1, 2011. Significant changes are described below.

Topic		Brief description of requirement under §66.0903 or §103.49
Thresholds	All public entities & Contractors	The \$25,000 threshold for public works projects has been changed to single-trade and multiple-trade project thresholds as noted below. The new thresholds apply to prevailing wage projects whose contract is awarded after June 2011.
Non-applicability: Threshold for Single-Trade Projects	All public entities & Contractors	Any single-trade project of public works with an estimated cost of completion of less than \$48,000 does not require a prevailing wage rate determination. "Single-trade project of public works" means a project of public works in which a single trade accounts for 85 percent or more of the total labor cost of the
Non-applicability: Threshold for Multiple-Trade Projects	All public entities except cities, towns & villages as noted below & Contractors	Any multiple-trade project of public works with an estimated cost of completion of less than \$100,000 does not require a prevailing wage rate determination. "Multiple-trade project of public works" means a project of public works in which no single trade accounts for 85 percent or more of the total labor cost of the project.
Non-applicability: Threshold for Multiple-Trade Projects	Cities or villages with a population less than 2500 & Towns & Contractors	A multiple trade project of public works erected, constructed, repaired, remodeled, or demolished by a private contractor for a city or village with a population less than 2500, or a town with an estimated cost of completion of less than \$234,000 does not require a prevailing wage rate determination. "Multiple-trade project of public works" means a project of public works in which no single trade accounts for 85 percent or more of the total labor cost of the
Non-applicability: Minor service & maintenance work	Towns & Contractors	The following TOWN projects only do not require a prevailing wage rate determination: <ul style="list-style-type: none"> • A project not funded under §86.31, Stats. (TRIP projects) that is limited to minor crack filling, chip or slurry sealing or other minor pavement patching, not including overlays. • The depositing of gravel on an existing gravel road applied solely to maintain the road; • Road shoulder maintenance; • Cleaning drainage or sewer ditches or structures; • Any other limited, minor work on public facilities or equipment that is routinely performed to prevent breakdown or deterioration.
Non-applicability: Work which a contractor or individual donates to a public	All public entities	Prevailing wage laws §§66.0903 & 103.49, Stats., do not apply to work performed on a project of public works for which the local governmental unit or the state or the state agency contracting for the project is not required to compensate any contractor, subcontractor, contractor's or subcontractor's agent, or individual for the work.

	Who's affected?	Brief description of requirement under §66.0903 or §103.49
Non-applicability: Residential	All public entities	A prevailing wage rate determination is not required for the erection, construction, repair, remodeling, or demolition of a residential _____ units or less.
Non-applicability: Residential subdivision infrastructure	All public entities	A prevailing wage rate determination is not required for a road, street, bridge, sanitary sewer, or water main project that is a part of a development in which at least 90 percent of the lots contain or will contain 2 dwelling units or less, as determined by the local governmental unit at the time of approval of the development, and that, on completion, is acquired by, or dedicated to, a local governmental unit (including under §236.13(2), Stats.), or the state, for ownership or maintenance the local _____ ental unit or the state.
Non-applicability: Certain nursing homes	All public entities	Prevailing wage law §66.0903, Stats., does not apply to a project of public works involving the erection, construction, repair, remodeling, or demolition of a nursing home in a county having a population of less than 50,000 when the project commences no later than 2012.
Electronic certified payroll record	Contractors	The requirement that every contractor on a prevailing wage project submit to DWD monthly a certified record of employees who worked on the project and that DWD post these certified records on its Internet website is discontinued effective July 1, 2011. However, contractors who worked on prevailing wage projects during the period January 1, 2010 through June 30, 2011, must comply with the repealed law for work completed on _____ duri _____ that _____ of time
Payroll record inspection request by any person	Contractors & Complainants	Any person may request DWD to inspect the payroll records of any contractor working on a prevailing wage project. On receipt of such a request, the contractor must submit to DWD a certified record of its payroll records, other than personally identifiable information relating to an employee of the contractor, for no longer than a 4-week period. DWD may request records from a contractor under this provision no more than once per calendar quarter for each project of public works on which the contractor is performing work. The department may not charge a requester a fee for obtaining that information. DWD must make these certified records available for _____ ublic inspection
Complaints	Complainants	There are no longer i
Statewide uniformity	Local governmental units	A local governmental unit may not enact & administer a prevailing wage ordinance/provision for public works or publicly funded private construction projects. Any extant laws to that effect are void.

Topic	Who's affected?	Brief description of requirement under §66.0903, §103.49 or §103.50
Covered employees	Truck drivers & Other workers & Contractors	<p>A laborer, worker, mechanic, or truck driver who is employed to process, manufacture, pick up, or deliver materials or products from a commercial establishment that has a fixed place of business from which the establishment supplies processed or manufactured materials or products or from a facility that is not dedicated exclusively, or nearly so, to a project of public works is NOT entitled to receive the prevailing wage rate UNLESS any of the following applies:</p> <p>1) the laborer, worker, mechanic, or truck driver is employed to go to the source of mineral aggregate such as sand, gravel, or stone and deliver that mineral aggregate to the site of a project of public works by depositing the material directly in final place, from the transporting vehicle or through spreaders from the transporting vehicle.</p> <p>2) the laborer, worker, mechanic, or truck driver is employed to go to the site of a project of public works, pick up excavated material or spoil from the site of the project, and transport that excavated material or spoil away from the site of the project.</p>
Annual Prevailing Wage Survey	All public entities	When establishing yearly prevailing wage rates, DWD may not use data from any construction work that is performed by a local governmental unit or a state
Prevailing Wage Rates	DOT & Contractors & Employees	For state highway prevailing wage rates, DWD is required to include wage rates for work performed on Sundays, holidays and shift differentials based on the time of day or night when work is performed.

The 2009-2011 State budget bill (2009 Wisconsin Act 28) created a new prevailing wage law (§66.0904, Wis. Stats.) for PUBLICLY FUNDED PRIVATE CONSTRUCTION PROJECTS effective January 1, 2010. The current 2011-2013 State budget bill (2011 Wisconsin Act 32) REPEALS this law. So the publicly funded private construction projects law only applies to projects that awarded the prime contract during the period January 1, 2010 – June 30, 2011. RIII

SINGLE & MULTIPLE TRADE PROJECT THRESHOLDS FOR §§66.0903 & 103.49, Wis. Stats. Effective July 1, 2011

The \$25,000 threshold for public works projects has been changed to single-trade and multiple-trade project thresholds as described below. Projects of public works with total estimated costs of completion that equal or exceed these thresholds require a prevailing wage rate determination.

SINGLE-TRADE THRESHOLD

A "single-trade project of public works" means a project in which a single trade accounts for 85 percent or more of the total labor cost of the project.

The single trade threshold is \$48,000.

MULTIPLE-TRADE THRESHOLDS

A "multiple-trade project of public works" means a project in which no single trade accounts for 85 percent or more of the total labor cost of the project.

(a) The multiple-trade threshold is \$100,000, unless a municipality falls under the description in (b).

(b) The multiple-trade threshold of \$234,000 applies to public works projects erected, constructed, repaired, remodeled, or demolished by a private contractor for:

- III a city or village with a population less than 2500, or
- III a town

APPLYING THE NEW THRESHOLDS

The department will apply the new single-trade & multiple-trade prevailing wage thresholds to projects of public works for which the prime contract is awarded on or after July 1, 2011.
