Subject: Application for Transportation General Permit
Project ID 9190-20-71
STH 32
Village of Pulaski
Brown County

Dear Mrs. Kempke,

The Wisconsin Department of Transportation (WisDOT), Northeast Region, is submitting a Permit Application for Project I.D. 9190-20-71 in Brown County. As the enclosed permit application and supporting documentation indicates, unavoidable wetland filling associated with construction of this project totals 0.1 acres. Please see the Permit Application and attachments for a detailed discussion regarding wetland impacts, including type, location, and amount.

According to the *Wisconsin Department of Transportation Wetland Mitigation Banking Technical Guideline* (1993, Revised 1997 and 2002), compensatory wetland mitigation must be provided and ratios of replacement versus loss are dependent on the wetland type lost and the wetland available for replacement. WisDOT is proposing to debit the impacts to the Peshtigo Brook Phase 2 site in Oconto County. Based on the 0.1 acres of wetland loss, a total of 0.1 acres of compensatory mitigation will be required for the project.

This project has been coordinated with the Wisconsin Department of Natural Resources (WDNR) through the WisDOT/WDNR Cooperative Agreement. Section 401 Water Quality Certification has been solicited from WDNR.

A PS&E (plans, specifications, & estimate) submittal date of November 1, 2019 is scheduled for this project. Please contact me if you have any questions regarding this request or need any further information.

Sincerely,

A handwritten signature in cursive script that reads "Kelsey Holmes".

Kelsey Holmes, P.E.
WisDOT Project Leader

Notice: Pursuant to chs. 30 and 31, Wis. Stats., ch. 281, Wis. Stats., and s. 283.33, Wis. Stats., this form is used to apply for coverage under the state construction site storm water runoff general permit, and to apply for a state or federal permit or certification for waterway and wetland projects or dam projects. This form and any required attachments constitute the permit application. Failure to complete and submit this application form may result in a fine and/or imprisonment or forfeiture under the provisions of applicable laws including s. 283.91, Wis. Stats. Personal information collected will be used for administrative purposes and may be provided to requesters to the extent required by Wisconsin's Public Records Laws (ss. 19.31-19.39, Wis. Stats.).

Use this form for (select all that apply):

Section 5: Pre-Application Resource Screening

Screening your project site for the presence of sensitive natural or cultural resources before applying for a permit can assist you in planning and designing your project to avoid or minimize impacts to these resources. Please identify any screening you have already completed and attach any supporting documentation to your application. If sensitive resources are identified during the permit review, it may result in delays in processing your application and/or project re-design.

Waterways: Provide the name(s) of closest waterbodies:

Unnamed Tributary to the Suamico River

Wetlands: Has the project site been assessed for the presence of wetlands? ☒ Yes ☐ No

If yes, select all sources of information used and attach supporting report or documentation:

- ☐ Wisconsin Wetland Inventory
- ☐ Wetland Locator Tool - <http://dnr.wi.gov/topic/wetlands/locating.html>
- ☐ Wetland Delineation by consultant
- ☐ NRCS Soils Map
- ☐ DNR Wetland Identification letter - <http://dnr.wi.gov/topic/wetlands/identification.html>
- ☐ DNR Wetland Confirmation letter - <http://dnr.wi.gov/topic/wetlands/identification.html>
- ☐ Army Corps of Engineers Concurrence letter
- ☒ Other: Wetland Delineation - DOT/DNR

Are wetlands proposed to be filled, excavated or disturbed during construction or as part of this project? ☒ Yes ☐ No

Endangered or Threatened Resources:

Has the presence of endangered or threatened resources been evaluated according to the protocols developed by the DNR Bureau of Natural Heritage Conservation (BNHC)? dnr.wi.gov/topic/ERReview/ ☒ Yes ☐ No

If yes, select how evaluation was completed and attach supporting report or documentation:

- ☒ DNR BNHC ER Review Letter
- ☐ Certified ER Review Letter
- ☐ Broad Incidental Take Permit/Authorization - specify (e.g. No/Low Impact Activities, Grassland and Savanna Management, etc.)

☒ Other: DNR/DOT Review

Section 6: Project Information (attach additional sheets as necessary)

Duration: 06/01/2021 09/30/2021
Anticipated Project Start Date (mm/dd/yyyy) Anticipated Project End Date (mm/dd/yyyy)

Photos: Provide photographs of the "before" condition. 11/5/15, 11/3/2016 (Attachment K)
Date of Photographs

Project Purpose and Need: Provide a one to two paragraph description of the proposed project, including land and water alterations and intended use(s) of the project.

The proposed project is located on WIS 32 from just North of CTH B to just South of E Green Bay St in the Village of Pulaski in Brown County. The purpose of this project is to preserve and extend the structural integrity of the asphaltic pavement to provide a safe and efficient highway system. The asphalt pavement along this section of WIS 32 is showing signs of distress including transverse/ longitudinal cracking and some alligator cracking, edge cracking, and rutting. The pavement structure will be at or near its service life by the time of construction and will be in need of repairs.

The project is a mill and resurface level improvement project (mill 4"/pave 4") with beam guard replacement, new roadway signs, storm sewer, culverts, and pavement markings. The roadway will also be widened 6' on each side to accommodate left turn lanes at the intersections of Blue Heron Dr. and Glenbrook Dr. Wetlands will be affected at the beam guard replacement, roadway widening, and storm sewer replacements. The loss of wetlands will be mitigated at a WisDOT bank site at a 1:1 ratio according to the Wisconsin Department of Transportation Wetland Mitigation Banking Technical Guideline. Proper erosion control measures will be utilized during construction to minimize impacts.

Section 7: Certification and Permission

Certification: I hereby certify that I am the owner or authorized representative of the owner of the property which is the subject of this Permit Application. I certify that the information contained in this form and attachments is true and accurate. I certify that the project will be in compliance with all permit conditions. I understand that failure to comply with any or all of the provisions of the permit may result in permit revocation and a fine and/or imprisonment or forfeiture under the provisions of applicable laws.

Permission: I hereby give the Department permission to enter and inspect the property at reasonable times, to evaluate this notice and application, and to determine compliance with any resulting permit coverage.

Kelsey Holmes
Signature of Landowner / Authorized Representative – **For Stormwater applications, signature of landowner is required. Authorized representative is not sufficient.**

Attachment A: Project Narrative

State Project Number 9190-20-71

WIS 32

Description: Village of Pulaski

Project Limits: CTH B – E Green Bay St

Brown County

Introduction and Project Location

The Wisconsin Department of Transportation (WisDOT) Northeast Region is in the process of developing plans for a proposed project along WIS 32, within the Village of Pulaski, in Brown County. The project begins just North of CTH B and proceeds North 0.86 miles to just South of E Green Bay St. This section of pavement on WIS 32 consists of a two-lane highway with 12-foot lanes and is classified as a minor arterial.

Purpose, Need, and Intended Use of Project

The purpose of the project is to improve deteriorating pavement, address safety and maintenance concerns, overlay the bridge deck, clean the edge of the bridge deck, and upgrade beam guard and drainage structures.

The asphalt pavement along this section of WIS 32 is showing signs of distress including transverse/longitudinal cracking and some alligator cracking, edge cracking, and rutting. The pavement structure will be at or near its service life by the time of construction and will need repairs.

The deck of bridge B-5-260 just North of CTH B needs some repairs and will receive a concrete overlay. The edge of the deck of the bridge also has some exposed rebar and needs repairs. The edge of the deck will be cleaned, and any loose debris will be removed. The exposed surface will be coated with a sealant.

Safety will be addressed by updating the existing beam guard and grading the slopes behind the beam guard to meet the beam guard requirements. Safety issues will also be addressed by widening the existing roadway to construct left turn lanes at the intersections of Blue Heron Dr. and Glenbrook Dr.

Several pipes from the storm sewer system are in poor condition and will need to be realigned and replaced.

Project Alternative Analysis

Three alternatives were considered. The first consisting of a “do-nothing” alternative. Because the purpose of the project is to address the roadway condition, safety concerns and deficient guard rail, the “do nothing” alternative was not recommended.

The second alternative was to resurface the roadway, replace deteriorating pipes, and replace the existing beam guard. Eliminating the beam guard is not an option because it is used to protect errant

vehicles from the waterway and the bridge. Wetland fill is unavoidable while grading to meet the requirements of the beam guard installation.

The third alternative was to resurface the roadway, replace deteriorating pipes, replace the existing beam guard, and widen the roadway to address safety concerns with the intersections of Blue Heron Dr. and Glenbrook Dr. This area is growing and resulting in increased traffic flows through these intersections. The widening of the roadway through this area will allow for the construction of left turn lanes at these intersections to alleviate some safety concerns. Since both options require grading it was decided to use this alternative to address as many concerns as possible.

Proposed Activity

The proposed project includes resurfacing WIS 32, updating beam guard, upgrading two of the intersections, and replacing deteriorating storm sewer. Proposed activities include:

- Milling 4", paving 4" of HMA
- Upgrading beam guard and grading the slopes
- Relocating driveway for beam guard installation
- Widening the roadway to construct left turn lanes for the Blue Heron Dr. and Glenbrook Dr. intersections
- Replacing some of the storm sewer in the Village
- Concrete overlay of bridge B-5-260
- Clean B-5-260 edge of deck
- Replacing pedestrian curb ramp
- Replacing culvert pipe to accommodate the roadway widening

See Attachment C for the project plan sheets.

Wetlands

The affected wetlands within the proposed project area are located from the start of the project just North of CTH B up into the more urban area of the Village. The wetlands were identified and drawn on the plan sheets using wetland delineation data from a field review performed by the Wisconsin Department of Natural Resources (WDNR) and WisDOT Environmental Coordinator staff. Following the wetland investigation, it was determined that construction of the project would require excavation and fill within the delineated wetland boundaries. See Attachment E for a set of plan sheets with the impacted wetland locations identified. Unavoidable permanent impacts to these wetlands total 0.1 acres.

Wetland Impact Avoidance and Minimization

Complete avoidance of wetland impacts is not possible due to the proximity of the wetlands to the roadway. Upgrading the beam guard was unavoidable and the required grading of the slopes around the beam guard made wetland impacts inescapable. The slopes were steepened to the minimum slopes behind the beam guard where allowable to reduce the amount of wetland impact.

Wetland Mitigation

Wetland compensation ratios were obtained from the *Wisconsin Department of Transportation Wetland Mitigation Banking Technical Guideline* (1993, Revised 1997 and 2002). See the Wetland Impact Tracking Form (Attachment F). A total of 0.1 acres of wetland is expected to be disturbed as part of these improvements. It was determined that an existing mitigation site would be used for compensation. Mitigation of the 0.1 acres will take place off-site at the Peshtigo Brook Phase 2 site in Oconto County.

Erosion Control

Erosion control and storm water management will be conducted in accordance with the Best Management Practices (BMP) and other guidance provided by Trans 401 – Construction Site and Erosion Control and Storm Water Management Procurers. All Erosion Control/Storm Water Management measures will be coordinated with the WDNR. Trans 401 also requires that the contractor prepare and Erosion Control Implementation Plan (ECIP), which identifies timing and staging of erosion control measures. Erosion control and storm water management measures proposed for the project include the following:

- Minimize the amount of land exposed at one time
- Silt fence
- Temporary Ditch Checks
- Culvert Pipe Ditch Checks
- Erosion Mat
- Temporary and Permanent Seeding
- Bypass Pumping

Agency Coordination Summary

During the preparation of the environmental document for the proposed project, the following agency coordination occurred:

Wisconsin Department of Natural Resources (WDNR) – The WDNR provided comments on wetlands, endangered resources, “Section 4(f) and 6(f)” lands, Fisheries/Stream work, Culverts/aquatic organism passage, Invasive species and Viral Hemorrhagic Septicemia, and floodplains in an initial project review letter dated February 16, 2016. See Attachment H for a copy of the letter.

State Historical Society – The project was placed on the screening list for both history and archeology, dated June 4, 2014. See Attachment I for the 106 Screening List.

US Fish & Wildlife Services (FWS) – The project was coordinated with FWS on November 16, 2017 under the Final 4 (d) Rule for the Northern Long-Eared bat. A response form FWS was not received, which indicates concurrence with the effect determinations for the NLEB and other listed species. See Attachment J for the FWS coordination.

MANHOLES 3-FT, 4-FT, 5-FT, 6-FT, 7-FT AND 8-FT DIAMETER

GENERAL NOTES

DETAILS OF CONSTRUCTION, MATERIALS AND WORKMANSHIP NOT SHOWN ON THIS DRAWING SHALL CONFORM TO THE PERTINENT REQUIREMENTS OF THE STANDARD SPECIFICATIONS AND THE APPLICABLE SPECIAL PROVISIONS. UNLESS OTHERWISE AUTHORIZED IN WRITING BY THE ENGINEER, THE CONTRACTOR SHALL NOT ORDER AND DELIVER PRECAST MANHOLE UNITS REQUIRED FOR THE PROJECT UNTIL A LIST OF SIZES IS FURNISHED BY THE ENGINEER.

DETAILED DRAWINGS FOR PROPOSED ALTERNATE DESIGNS FOR UNDERGROUND DRAINAGE STRUCTURES SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL PROVIDING THAT SUCH ALTERNATE DESIGNS MAKE PROVISION FOR EQUIVALENT CAPACITY AND STRENGTH.

ALL DRAINAGE STRUCTURES ARE DESIGNATED ON THE PLANS AS "MANHOLES 3X3-L", "CATCH BASINS 4-B", "INLETS 2X3-H", ETC. THE FIRST NUMBERS DESIGNATE THE SIZE OF THE STRUCTURE, AND THE FOLLOWING LETTER DESIGNATES THE TYPE OF COVER TO BE USED TO COMPRISE THE COMPLETE UNIT.

BASES SHALL BE PLACED ON A BED OF MATERIAL AT LEAST 6 INCHES IN DEPTH, WHICH MEETS THE REQUIREMENTS OF FOUNDATION BACKFILL. THIS BEDDING SHALL BE COMPACTED AND PROVIDE UNIFORM SUPPORT FOR THE ENTIRE AREA OF THE BASE.

PRECAST REINFORCED CONE TOPS (ECCENTRIC OR CONCENTRIC) OR PRECAST REINFORCED FLAT SLAB TOPS MAY BE USED ON CONCRETE BLOCK STRUCTURES.

ECCENTRIC CONE TOPS MAY BE USED ON ALL STRUCTURES, AND CONCENTRIC CONE TOPS SHALL BE USED ONLY ON STRUCTURES 5 FEET OR LESS IN DEPTH, UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

STEPS MEETING AASHTO M199 AND THE FOLLOWING REQUIREMENTS SHALL BE INSTALLED IN ALL STRUCTURES OVER 5 FEET IN DEPTH: 16 INCH C-C MAXIMUM SPACING; PROJECT A MINIMUM CLEAR DISTANCE OF 4 INCHES FROM THE WALL AT THE POINT OF EMBEDMENT; MINIMUM LENGTH OF 10 INCHES; MINIMUM WALL EMBEDMENT OF 3 INCHES. FERROUS METAL STEPS NOT PAINTED OR TREATED TO RESIST CORROSION SHALL HAVE A MINIMUM CROSS SECTIONAL DIMENSION OF 1 INCH.

STEPS OF APPROVED POLYPROPYLENE PLASTIC COATED REINFORCEMENT BAR ARE ACCEPTABLE. REINFORCING BAR MUST BE A MINIMUM OF 1/2" AND MEET THE REQUIREMENTS OF ASTM A615.

CERTIFICATION SHALL BE PROVIDED THAT INSTALLED STEPS WHEN TESTED IN ACCORDANCE WITH SECTION 10 OF AASHTO T280 CAN WITHSTAND A VERTICAL LOAD OF 800 LBS. AND A HORIZONTAL LOAD OF 400 LBS.

ALL BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2 INCHES CLEAR UNLESS OTHERWISE SHOWN OR NOTED.

CONCRETE BLOCK WILL NOT BE PERMITTED FOR STRUCTURES GREATER THAN 4 FEET IN DIAMETER.

PRECAST REINFORCED RISERS SHALL HAVE A TONGUE AND GROOVE JOINT WITH TONGUE UP OR DOWN.

ALL PRECAST MANHOLE UNITS SHALL CONFORM TO THE PERTINENT REQUIREMENTS OF AASHTO DESIGNATION M 199.

4" OVERHANGING BASES ARE REQUIRED FOR ALL CONCRETE BLOCK INSTALLATIONS. 4" OVERHANG IS REQUIRED WHEN SEPARATE PRECAST BASE IS PROVIDED. OVERHANG IS NOT REQUIRED ON PRECAST STRUCTURES WITH AN INTEGRAL OR MONOLITHIC BASE.

FOR ADDITIONAL CONFIGURATIONS, MAINTAIN A MINIMUM OF 12 INCHES AS MEASURED FROM THE INSIDE OF THE STRUCTURE WALL BETWEEN THE OUTSIDE PIPE WALLS OF ADJACENT PIPES. SEE DETAIL "C".

- ① MINIMUM WALL THICKNESS SHALL BE 4 INCHES FOR 3-FT, 5 INCHES FOR 4-FT, 6 INCHES FOR 5-FT, 7 INCHES FOR 6-FT, 8 INCHES FOR 7-FT AND 9 INCHES FOR 8-FT DIAMETER PRECAST MANHOLES.
- ② FOR PRECAST MANHOLES PROVIDE REINFORCING STEEL IN ACCORDANCE TO AASHTO M199.
- ③ PRECAST FLAT SLAB TOPS AND BASES WITH A DIAMETER OF 48" AND LESS SHALL HAVE A MINIMUM THICKNESS OF 6". PRECAST FLAT SLAB TOPS AND BASES WITH A DIAMETER LARGER THAN 48" SHALL HAVE A MINIMUM THICKNESS OF 8".

## GENERAL NOTES

- 8 DO NOT INSTALL REFLECTORS ON THE FIRST 50 FEET OF THE APPROACH END OF THE ENERGY ABSORBING TERMINAL. RAIL SPLICE LOCATIONS ARE THE ONLY ACCEPTABLE LOCATIONS FOR REFLECTORS.
  - 9 25 FEET OF HALF POST SPACING IS REQUIRED ON APPROACH AND DEPARTURE ENDS OF QUARTER POST SPACING.
- POST BOLTS ARE A 3/8" DIAMETER ASTM A307 GUARDRAIL BOLT. A POST BOLT REQUIRES 3/4" DIAMETER A563A DOUBLE RECESSED (DR) HEAVY HEX NUT AND 3/4" DIAMETER F844 FLAT WASHER. POST BOLTS MAY BE LONGER IF MULTIPLE BLOCKOUTS ARE BEING USED.
- GUARD RAIL SPLICE BOLTS ARE A 3/8" DIAMETER ASTM A307 GUARDRAIL HEAD BOLT. A GUARDRAIL SPLICE BOLT REQUIRES 3/4" DIAMETER A563A DOUBLE RECESSED (DR) HEAVY HEX NUT.

DETAIL FOR 16" BLOCKOUT DEPTH

IT IS ACCEPTABLE TO USE BLOCKOUTS UP TO 16" DEEP TO INCREASE THE POST OFFSET TO AVOID UNDERGROUND OBSTACLES. THERE IS NO LIMIT TO THE NUMBER OF POSTS THAT CAN HAVE ADDITIONAL BLOCKOUTS UP TO 16" DEEP.

POST BOLT TABLE

| L      | T (MIN.) |

BEAM LAPPING DETAIL

POST DRIVING FOR CONTINUOUS  
UNDERGROUND OBSTRUCTION

DETAIL FOR 36" BLOCKOUT DEPTH

NOTES: UNDER SPECIAL CIRCUMSTANCES, SUCH AS AVOIDING OBSTACLES THAT ARE NOT RELOCATED, IT IS ACCEPTABLE TO INSTALL ADDITIONAL BLOCKOUTS TO OBTAIN UP TO 36" DEPTH FOR ONE OR TWO POSTS IN A SECTION OF GUARDRAIL.  
DO NOT USE 16" OR 36" BLOCKOUTS IF IT CAUSES THE POST TO BE DRIVEN BEYOND SHOULDER HINGE POINT OR CAUSES A FIXED OBJECT TO BE WITHIN THE DEFLECTION DISTANCE OF THE BARRIER.

# SDD 14b45-a Midwest Guardrail System (MGS) Thrie Beam Transition - Layout

TWO WAY TRAFFIC

ONE WAY TRAFFIC

(T) THRIE BEAM CONNECTION

(W) W-BEAM CONNECTION WHEN REQUIRED

## TYPICAL LOCATIONS OF THRIE BEAM AND W-BEAM CONNECTIONS TO BRIDGE

### GENERAL NOTES

IF ROCK IS ENCOUNTERED, REMOVE ROCK TO FULL DEPTH OF POST PLUS 2 1/2", AND 12" DIAMETER AROUND POST. SEE 14B42 FOR MORE DETAILS.

TRANSITION USES STEEL POSTS ONLY.

SEE STANDARD DETAIL DRAWING 14 B 42 FOR MORE INFORMATION.

POST 2 THROUGH 17 USES STEEL POST ONLY

① BRIDGE RAILING TYPE "W" DOES NOT REQUIRE A TERMINAL CONNECTOR.

② OPTIONAL CURB AND GUTTER OR DRAINAGE FEATURE SEE PLAN FOR INFORMATION.

⑬ STEEL OR WOOD POST IS ACCEPTABLE AT POST 1. SEE SDD14B42

# SDD 14b45-b MGS Thrie Beam Transition - Post Details, Thrie Beam Terminal Connector Details, Splice Detail, Cross Section

## GENERAL NOTES

- ② OPTIONAL CURB AND GUTTER OR DRAINAGE FEATURE SEE PLAN FOR INFORMATION.
- ③ WHEN USING STEEL POSTS AND WOOD BLOCKOUTS INSTALL FOUR 10D GALVANIZED NAILS. INSTALL NAILS AT THE BACK CORNERS OF THE BLOCK AND BEND THE NAILS OVER THE FLANGE OF THE STEEL POST.
- ④ TOLERANCE FOR TOP OF W-BEAM RAIL IS  $\pm 1"$ .
- ⑬ STEEL OR WOOD POST IS ACCEPTABLE AT POST 1. SEE SDD 14B42

GENERAL NOTES

STEEL POSTS ARE W6X9 OR W6X8.5.

BOLT HOLES FOR POST ARE ON FRONT AND OF SIDE OF POST.

3 WHEN USING STEEL POSTS AND WOOD BLOCKOUTS INSTALL FOUR 16D GALVANIZED NAILS. INSTALL NAILS AT THE BACK CORNERS OF THE BLOCK AND BEND THE NAILS OVER THE FLANGE OF THE STEEL POST.

5 WOOD BLOCKS MAY BE CONSTRUCTED OUT OF 2 WOOD BLOCKS. SEE ALTERNATE WOOD BLOCK DETAIL.

13 STEEL OR WOOD POST IS ACCEPTABLE AT POST 1. SEE SDD 14B42.

# SDD 14b45-d MGS Thrie Beam Transition - W and Thrie Beam Connection to Bridge Parapet with Square Ends

FRONT VIEW

## THRIE BEAM CONNECTION TO BRIDGE PARAPET WITH SQUARE ENDS

### GENERAL NOTES

THESE ARE TYPICAL CONNECTION DETAILS. ADJUST THE POSITION OF CONNECTIONS TO EXISTING BRIDGES TO FIT THE ACTUAL BRIDGE AND SITE DIMENSIONS.

② OPTIONAL CURB AND GUTTER OR DRAINAGE FEATURE SEE PLAN FOR INFORMATION.

④ TOLERANCE FOR TOP OF BEAM IS  $\pm 1"$ .

⑥ DRILLING BOLT HOLES THROUGH THE PARAPET, BOLTS, NUTS, WASHERS AND REPAIRING DAMAGED CONCRETE ARE INCIDENTAL TO THE CONTRACT.

⑦ BOLTS MAY BE A325 BOLTS OR A449 BOLTS. BOLT LENGTH AND THREADING LENGTH ARE TO ALLOW FOR A TIGHT CONNECTION BETWEEN RIGID BARRIER AND THRIE BEAM CONNECTION PLATE. CONTRACTOR IS TO FIELD VERIFY BOLT LENGTH AND THREAD LENGTH. ONE ROUND WASHER REQUIRED BETWEEN BOLT HEAD AND THRIE BEAM CONNECTOR PLATE. BOLTS THAT EXTEND THROUGH THE PARAPET AND OUT THE BACK FACE REQUIRE A HARDENED ROUND STEEL WASHER THAT IS 2" O.D. X  $\frac{5}{8}"$  THICK AND ONE PLATE WASHER. REPAIR ANY DAMAGED CONCRETE FROM BOLT INSTALLATION.

⑧ THE RECESS FOR A W-BEAM CONNECTION, WHICH EXISTS ON SOME PARAPETS OF THIS TYPE, SHALL BE FILLED WITH A TREATED TIMBER BLOCKOUT. BLOCKOUT SIZE IS 1'-6" X 2'-0" X  $3 \frac{1}{2}"$ .

## GENERAL NOTES

- COVER PLATE PANELS ARE  $\frac{3}{16}$ " THICK.
- ALL STIFFENERS ARE  $\frac{1}{4}$ " THICK.
- CONNECTOR PLATE SHALL BE FABRICATED FROM ASTM GRADE A36 STEEL AND GALVANIZED.
- FOR GALVANIZED REQUIREMENTS, SEE SECTION 614 OF THE STANDARD SPECIFICATIONS.
- ALL HOLE DIAMETERS SHALL BE 1".
- FOR OPPOSITE SIDE INSTALLATION MIRROR DRAWINGS.

- 10 STIFFENERS LOCATED AT THE OUTSIDE EDGES OF THE COVER PLATES SHALL BE WELDED AS FOLLOWS:  
SINGLE BEVEL GROOVE WELD ON EXTERNAL SIDES AND  $\frac{3}{16}$ " FILLET WELD BY 1" LONG SPACED AT 2" ON INTERNAL SIDES.
- 11 STIFFENERS LOCATED ON THE INSIDE OF THE COVER PLATE SHALL BE WELDED AS FOLLOWS:  
 $\frac{3}{16}$ " FILLET WELD BY 1" LONG SPACED AT 2".

THRIE BEAM CONNECTION TO SINGLE SLOPE BARRIER

SINGLE SLOPE CONNECTION PLATE PLACEMENT

GENERAL NOTES

CONNECTOR PLATE, DRILLING BOLT HOLES THROUGH THE PARAPET, BOLTS, NUTS, WASHERS AND REPAIRING DAMAGED CONCRETE ARE INCIDENTAL TO THE CONTRACT.

- (2) OPTIONAL CURB AND GUTTER OR DRAINAGE FEATURE SEE PLAN FOR INFORMATION.
- (7) BOLTS MAY BE A325 BOLTS OR A449 BOLTS. BOLT LENGTH AND THREADING LENGTH ARE TO ALLOW FOR A TIGHT CONNECTION BETWEEN RIGID BARRIER AND THRIE BEAM CONNECTION PLATE. CONTRACTOR IS TO FIELD VERIFY BOLT LENGTH AND THREAD LENGTH. ONE ROUND WASHER REQUIRED BETWEEN BOLT HEAD AND THRIE BEAM CONNECTOR PLATE. BOLTS THAT EXTEND THROUGH THE PARAPET AND OUT THE BACK FACE REQUIRE A HARDENED ROUND STEEL WASHER THAT IS 2" O.D. X 5/8" THICK AND ONE PLATE WASHER. REPAIR ANY DAMAGED CONCRETE FROM BOLT INSTALLATION.

R.D.S. = 45 M.P.H.

GENERAL NOTES

- DRAWINGS SHALL NOT BE SCALED.
- PROTECTIVE SURFACE TREATMENT TO BE APPLIED TO THE ENTIRE TOP SURFACE OF THE CONCRETE OVERLAY.
- SEAL OVERLAY CONSTRUCTION JOINTS ACCORDING TO SECTION 502.3.13.1 OF THE STANDARD SPECIFICATIONS. COST INCIDENTAL TO BID ITEM "CONCRETE MASONRY OVERLAY DECKS".
- DIMENSIONS SHOWN ARE BASED ON THE ORIGINAL STRUCTURE PLANS.
- ANY EXCAVATION NECESSARY TO COMPLETE THE OVERLAY OR JOINT REPAIR AT THE ABUTMENTS IS TO BE CONSIDERED INCIDENTAL TO THE BID ITEM "CONCRETE MASONRY OVERLAY DECKS".
- PROFILE GRADE LINE SHALL BE DETERMINED IN THE FIELD BASED ON A MINIMUM OVERLAY THICKNESS OF 1 1/2" PLACED ABOVE THE DECK SURFACE AFTER SURFACE PREPARATION. EXPECTED AVERAGE OVERLAY THICKNESS IS 2". IF EXPECTED AVERAGE OVERLAY THICKNESS IS EXCEEDED BY MORE THAN 1/2", CONTACT THE STRUCTURES DESIGN SECTION.
- THE ENTIRE EXISTING ASPHALTIC OVERLAY SHALL BE REMOVED FROM THE BRIDGE DECK UNDER BID ITEM "REMOVING ASPHALTIC CONCRETE DECK OVERLAY B-5-260" AND A MINIMUM OF 1-INCH OF CONCRETE SHALL BE REMOVED FROM THE ENTIRE BRIDGE DECK UNDER THE BID ITEM "CLEANING DECKS".
- THE AVERAGE OVERLAY THICKNESS IS BASED ON THE MINIMUM OVERLAY THICKNESS PLUS 1/2-INCH TO ACCOUNT FOR VARIATIONS IN THE DECK SURFACE.
- PREPARATION DECKS TYPE 1, PREPARATION DECKS TYPE 2, AND FULL DEPTH DECK REPAIR ARE BASED ON THE PLANS AND AS DETERMINED BY THE ENGINEER. DECK PREPARATION AND FULL DEPTH DECK REPAIRS SHALL BE FILLED WITH "CONCRETE MASONRY OVERLAY DECKS".

TOTAL ESTIMATED QUANTITIES

| BID ITEM NUMBER | BID ITEMS                                        | UNIT | TOTALS |

# EPlans Preliminary Sheet Numbering Tool

This sheet: [ftp://ftp.dot.state.wi.us/transp/roads/eplans/prelim\\_sheet\\_numbers.pdf](ftp://ftp.dot.state.wi.us/transp/roads/eplans/prelim_sheet_numbers.pdf)

## Notes

- Acrobat 5 or higher is required to use this tool.
- The Bureau of Highway Construction places sheet numbers in the final plan.
- This sheet is for placing preliminary sheet numbers with a "PRE\_" prefix.
- If a plan contains multiple projects, number each plan individually.
- Leave this sheet in the plan.

### TO ADD PRELIMINARY SHEET NUMBERS

- 1. Insert this sheet at the end of the plan**
  - a. With the plan open in Acrobat, select Document > Insert Pages.
  - b. In the Select File to Insert dialog box, select this file (prelim\_sheet\_numbers.pdf)
  - c. In the Insert dialog box, choose After for Location and Last page for Page.
  - d. Click OK.
- 2. Click the Place Preliminary Sheet Numbers button**
  - a. Go to the last sheet of the plan.
  - b. Click the Place Preliminary Sheet Numbers button once.  
(The preliminary sheet number appears in the bottom right corner of the sheets.  
The number should match te page number in the Acrobat Status bar).
- 3. Re-Save the PDF**
  - a. Select File > Save As and save the PDF.

### TO REMOVE PRELIMINARY SHEET NUMBERS

## Attachment D: Environmental Special Provisions

## Special Provisions

### Table of Contents

## **STSP'S Revised November 19, 2018**

### **SPECIAL PROVISIONS**

#### **1. General.**

Perform the work under this construction contract for Project 9190-20-71, Village of Pulaski, CTH B - E Green Bay St, STH 32, Brown County, Wisconsin and Project 9190-23-71, Green Bay – Pulaski, STH 29 – Village of Pulaski, STH 32, Brown County, Wisconsin as the plans show and execute the work as specified in the State of Wisconsin, Department of Transportation, Standard Specifications for Highway and Structure Construction, 2019 Edition, as published by the department, and these special provisions.

If all or a portion of the plans and special provisions are developed in the SI metric system and the schedule of prices is developed in the US standard measure system, the department will pay for the work as bid in the US standard system.

100-005 (20181119)

#### **2. Scope of Work.**

The work under this contract shall consist of Structure B-05-0229, Structure B-05-0230, Structure B-5-0260, Structure C-05-0032, removing asphaltic surface milling, HMA pavement, Cold-In-Place recycling, excavation common, borrow, base aggregate dense, culvert pipe reinforced concrete, concrete curb and gutter, concrete sidewalk, storm sewer pipe reinforced concrete, guardrail, signing, pavement marking, and all incidental items necessary to complete the work as shown on the plans and included in the proposal and contract.

104-005 (20090901)

#### **3. Prosecution and Progress.**

Begin work within ten calendar days after the engineer issues a written notice to do so.

Provide the start date to the engineer in writing within a month after executing the contract but at least 14 calendar days before the preconstruction conference. Upon approval, the engineer will issue the notice to proceed within ten calendar days before the approved start date.

To revise the start date, submit a written request to the engineer at least two weeks before the intended start date. The engineer will approve or deny that request based on the conditions cited in the request and its effect on the department's scheduled resources.

Complete construction operations on WIS 32 to the stage necessary to reopen it to through traffic prior to 12:01 AM July 15, 2021.

#### **Fish Spawning**

There shall be no instream disturbance of the following waters as a result of construction activity under or for this contract, prior to June 16, 2021, in order to avoid adverse impacts upon the spawning of Northern Pike.

Project 9190-20-71

- Unnamed Tributary to the Suamico River (B-05-0260)

Project 9190-23-71

- West Branch Suamico River (C-05-0031)
- Unnamed (C-05-0032)
- Potter Creek (C-05-0033)

Any change to this limitation will require submitting a written request by the contractor to the engineer, subsequent review and concurrence by the Department of Natural Resources in the request, and final approval by the engineer. The approval will include all conditions to the request as mutually agreed upon by WisDOT and DNR.

0036 (20090901)

#### **Northern Long-eared Bat (*Myotis septentrionalis*)**

Northern Long-eared Bats (NLEB) have the potential to inhabit the project limits because they roost in trees. Roosts may not have been observed on this project, but conditions to support the species exist. The species and all active roosts are protected by the Federal Endangered Species Act. If an individual bat or active roost is encountered during construction operations, stop work and notify the engineer and the WisDOT Regional Environmental Coordinator (REC).

If additional construction activities beyond what was originally specified are required to complete the work, approval from the engineer, following coordination with WisDOT REC, is required prior to initiating these activities.

#### **4. Notice to Contractor, Verification of Asbestos Inspection, No Asbestos Found.**

John Roelke, License Number All-119523, inspected Structure B-05-0260 for asbestos on July 17, 2017. No regulated Asbestos Containing Material (RACM) was found on this structure. A copy of the inspection report is available from: Andy Fulcer (920) 362-6126.

stp-107-127 (20120615)

#### **5. Information to Bidders, U.S. Army Corps of Engineers Section 404 Permit.**

The department has obtained a U.S. Army Corps of Engineers Section 404 permit. Comply with the requirements of the permit in addition to requirements of the special provisions. A copy of the permit is available from the regional office by contacting Andy Fulcer at (920) 362-6126.

stp-107-054 (20080901)

#### **6. Information to Bidders, WPDES General Construction Storm Water Discharge Permit.**

The department has obtained coverage through the Wisconsin Department of Natural Resources to discharge storm water associated with land disturbing construction activities of this contract under the Wisconsin Pollutant Discharge Elimination System General Construction Storm Water Discharge Permit (WPDES Permit No. WI-S066796-1). A certificate of permit coverage is available from the regional office by contacting Andy Fulcer at (920) 362-6126. Post the permit in a conspicuous place at the construction site.

stp-107-056 (20180628)

#### **7. Environmental Protection, Aquatic Exotic Species Control.**

Exotic invasive organisms such as VHS, zebra mussels, purple loosestrife, and Eurasian water milfoil are becoming more prolific in Wisconsin and pose adverse effects to waters of the state. Wisconsin State Statutes 30.07, "Transportation of Aquatic Plants and Animals; Placement of Objects in Navigable Waters", details the state law that requires the removal of aquatic plants and zebra mussels each time equipment is put into state waters.

At construction sites that involve navigable water or wetlands, use the follow cleaning procedures to minimize the chance of exotic invasive species infestation. Use these procedures for all equipment that comes in contact with waters of the state and/or infested water or potentially infested water in other states.

Ensure that all equipment that has been in contact with waters of the state, or with infested or potentially infested waters, has been decontaminated for aquatic plant materials and zebra mussels before being used in other waters of the state. Before using equipment on this project, thoroughly disinfect all equipment that has come into contact with potentially infested waters. Guidelines from the Wisconsin Department of Natural Resources for disinfection are available at:

<http://dnr.wi.gov/topic/invasives/disinfection.html>

Use the following inspection and removal procedures:

1. Before leaving the contaminated site, wash machinery and ensure that the machinery is free of all soil and other substances that could possibly contain exotic invasive species;

2. Drain all water from boats, trailers, bilges, live wells, coolers, bait buckets, engine compartments, and any other area where water may be trapped;
3. Inspect boat hulls, propellers, trailers and other surfaces. Scrape off any attached mussels, remove any aquatic plant materials (fragments, stems, leaves, seeds, or roots), and dispose of removed mussels and plant materials in a garbage can before leaving the area or invested waters; and
4. Disinfect your boat, equipment and gear by either:
  - 4.1. Washing with ~212 F water (steam clean), or
  - 4.2. Drying thoroughly for five days after cleaning with soap and water and/or high pressure water, or
  - 4.3. Disinfecting with either 200 ppm (0.5 oz per gallon or 1 Tablespoon per gallon) Chlorine for 10-minute contact time or 1:100 solution (38 grams per gallon) of Virkon Aquatic for 20- to 30-minute contact time. Note: Virkon is not registered to kill zebra mussel veligers nor invertebrates like spiny water flea. Therefore this disinfect should be used in conjunction with a hot water (>104° F) application.

Complete the inspection and removal procedure before equipment is brought to the project site and before the equipment leaves the project site.

stp-107-055 (20130615)

## **8. Environmental Protection, Blandings Turtle**

Blandings turtles, a special concern turtle, are known to inhabit the riparian corridor. It is reasonable to assume that Blandings turtles may be present at or near the project site during construction. If project construction starts in the spring, protect the perimeter of the areas to be disturbed with properly trenched-in silt fence before May 1 (March 15 for project within the riparian corridors) to discourage turtles from entering the work area. If the construction area cannot be silt-fenced by May 1 (March 15 for projects within the riparian corridors), install the silt fence before construction activities. Also, survey the area behind the silt fence and remove all turtles confined within the project area before any site disturbance. Complete the survey and removal of turtles from construction areas periodically throughout the construction period.

ner-107-070 (20171213)

## **9. Environmental Protection, By-Pass Pumping**

*Add the following to standard spec 107.18:*

If by-pass pumping is required, the means and methods proposed to be used during construction shall be submitted for approval as part of the Erosion Control Implementation Plan for each location it is required. The submittal shall include how the intake will be managed to not cause an increase in the background level turbidity during pumping; equipment pumping rate capabilities; discharge energy dissipation; and erosion controls. For by-pass pumping that will extend beyond one working day, the submittal should also include how the work zone will be managed and protected should the pump fail; be shut down due to unacceptable water quality; or storm water flows exceed the pumping rate of equipment. After setup of the approved by-pass pumping operation, the contractor shall demonstrate that the means and methods will pump the water at an acceptable water quality before starting work that necessitates the by-pass pumping. The cost of all work and materials associated with by-pass pumping is incidental to the bid items the work is associated with. Erosion control devices beyond the discharge energy dissipation point will be paid for at the contract unit prices for the items that are included in the plan.

ner-107-035 (20180212)

## **10. Environmental Protection, Dewatering**

*Add the following to standard spec 107.18:*

If dewatering is required, treat the water to remove suspended sediments by filtration, settlement or other appropriate best management practice before discharge. The means and methods proposed to be used during construction shall be submitted for approval as part of the Erosion Control Implementation Plan for dewatering at each location it is required. The submittal shall also include the details of how the intake will be managed to not cause an increase in the background level turbidity before treatment and any additional erosion controls necessary to prevent sediments from reaching the project limits or wetlands and waterways. Guidance on dewatering can be found on the Wisconsin Department of Natural

Resources website located in the Storm Water Construction Technical Standards, Dewatering Code #1061, "Dewatering". This document can be found at the WisDNR website:

[http://dnr.wi.gov/topic/stormwater/standards/const\\_standards.html](http://dnr.wi.gov/topic/stormwater/standards/const_standards.html)

The cost of all work and materials associated with water treatment and/or dewatering is incidental to the bid items the work is associated.

### Is a discharge of dredged or fill material into wetlands anticipated?

NO ☐ ➡ Form complete; no further information is required (RETURN FORM).

YES ☒ ➡ 1. Complete remainder of form:

- Complete yellow portions on both pages of the form and return to REC for finalization and approval.
- Include comment about sending for approval only after final impacts are determined.

2. Include final APPROVED form with DNR 401 and COE 404 permit applications.

### Describe methods used to avoid and minimize impacts to wetlands:

Slopes behind beamguard were steepened as much as possible to decrease the amount of wetland impact.

Was professional discretion  
used to determine debit  
ratio?

No ☒

Yes ☐

Describe discretionary  
rationale below:

### WETLAND IMPACT / REPLACEMENT SUMMARY

| Type Impacted | Area Impacted | Type Mitigated | Area Mitigated |

**WETLAND IMPACT TRACKING FORM - PAGE 2**  
**DETAILED TABLE OF WETLAND IMPACTS****Directions to complete Page 2:**

1. One location may be made up of several different wetland types. List each type of wetland impacted from each location on the project corridor separately in the table below.
2. Contact the Environmental Coordinator for appropriate ratio and bank information.
3. Use Department of Transportation Wetland Classification System:  
<http://roadwaystandards.dot.wi.gov/standards/fdm/24-05-010att.pdf#d24-5a10.2>
4. Individual wetland areas should be reported to the nearest 0.001-acre. Impacts are summed by type and rounded to the nearest 0.01-acre.

Attachment H: WDNR Initial Project Review

February 16, 2016

DOT: Brown

Matthew Ternes  
WI Department of Transportation  
944 Vanderperren Way  
Green Bay, WI 54304

**Subject: DNR Initial Project Review**  
Project I.D. 9190-20-00/71  
STH 32 Resurface  
CTH B to East Green Bay Street, Village of Pulaski  
Brown County  
T.25N. – R.19E., Sections 5 and 6

Dear Mr. Ternes:

The Wisconsin Department of Natural Resources (DNR) has received the information you provided for the proposed above-referenced project on February 5, 2016. According to your proposal, the purpose of this project is to resurface STH 32. Proposed improvements include milling the existing pavement, paving new layer of asphalt, intersection improvements, signing, pavement marking, replacement of culvert pipes, beam guard upgrades, storm sewer work, and minor structure improvements to the edge of a bridge deck.

Preliminary information has been reviewed by DNR staff for the project under the DNR/DOT (Wisconsin Department of Transportation) Cooperative Agreement. Initial comments on the project as proposed are included below, and assume that additional information will be provided that addresses all resource concerns identified. In addition to the project specific resource concerns highlighted below, it is DNR's expectation that the full range of DOT roadway standards will be applied throughout the design process.

#### **A. Project-Specific Resource Concerns**

##### **Section 4(f) Requirement**

Public lands are present in the vicinity of this project. If there is potential for impacts to these lands, please begin coordination with us as soon as possible. First and foremost, every effort should be taken to avoid impacts to these lands.

There is a U.S. Dept. of Transportation "Section 4(f)" process for federally funded transportation projects that impact various types of public parks, wildlife refuges, and recreation areas. This requirement is coordinated by state and federal transportation departments. Please ensure the 4f process as described in DOT FDM Chapter 21-25-1 is followed.

##### **Land and Water Conservation Fund (LWCF) Lands and 6(f) Requirement**

An additional "6(f)" requirement will apply to Mountain Bay State Trail. Section 6(f) of the LWCF requires that special steps be taken when land acquired with LWCF funding is converted from a recreational use to any other

use. These lands must be replaced with property of equal market value, as well as equivalent usefulness and location. DNR together with the National Park Service (NPS), administers this program. Please be aware that while both the 4(f) and 6(f) processes may be initiated concurrently, DNR must have final 4(f) approval from the Federal Highways Administration before we may send 6(f) materials to the National Park Service for their approval.

If it is determined that avoidance of this property is not practicable, then DNR will begin the 6(f) process with DOT and the NPS. This is a lengthy process, which can take up to one year or longer to complete, so adequate planning will be necessary. The process is coordinated by the DNR Transportation Liaison, working with the DNR State LWCF Grants Manager.

### **Wetlands**

There is potential for wetland impacts to occur as a result of this project. Wetland impacts must be avoided and/or minimized to the greatest extent practicable. Unavoidable wetland losses must be compensated for in accordance with the DNR/DOT Cooperative Agreement and the DOT Wetland Mitigation Banking Technical Guideline. Per the Cooperative Agreement, mitigation banking is the preferred compensation option, however DOT and DNR agree that other practicable and ecologically valuable project specific opportunities may be pursued on a case-by-case basis. DNR requests information regarding the amount and type of unavoidable wetland impacts.

During my site visit I noticed wetland vegetation sticking out of the snow in several areas throughout the project. Several culvert crossings have wetland vegetation along the drainageway or waterway. It is likely there will be wetlands impacted if work outside the toe-of-slope in the beam guard or culvert crossings.

### **Fisheries/Stream Work**

There is a waterway crossing along this project about 760 feet south of Blue heron Drive. The waterway is an unnamed tributary to Suamico River. Based on consultation with the Area Fish Biologist using air photos, DNR Northern Pike maps and The Nature Conservancy (TNC) barrier maps this unnamed tributary to Suamico River has higher potential for spring spawning activity. In order to protect developing fish eggs and substrate for aquatic organisms, all instream work that could adversely impact water quality should be undertaken between June 16 and the end of February.

### **Aquatic Connectivity and Culvert Work**

If the structure at the unnamed tributary to Suamico River will be replaced or modified in a way that would impact the waterway then stream connectivity should be incorporated into the design. If the structure will incorporate a bottom then it should be set and sized in such a manner to avoid or minimize impacts to stream morphology, aquatic organism passage, and water quality. This requires that water flow characteristics and streambed sediment in the culvert should closely match the characteristics of the streambed sediment in the natural channel and inside the structure. The invert elevations of the existing and proposed structure, the water surface elevations, and the natural streambed elevations upstream and downstream should be specified in the plans. The natural streambed elevations should extend well beyond the zone of influence of the culvert. The invert elevation of the new culvert should be set an adequate distance below the natural streambed elevation, to allow for a natural and continuous streambed condition to occur.

### **Endangered Resources**

Based upon a review of the Natural Heritage Inventory (NHI) and other DNR records dated February 11, 2016, there are records for the Blandings turtle (*Emydoidea blandingii*), which is a special concern turtle. If project construction will start in the spring, the perimeter of the area to be disturbed should be protected with properly trenched-in silt fence prior to May 1 (March 15 for projects within the riparian corridors) to discourage turtles from entering the work area. If the construction area cannot be silt-fenced by May 1 (or March 15 for projects within riparian corridors), the silt fence must be installed prior to construction activities and the area behind the

silt fence must be surveyed and any turtles confined within the project area removed prior to any site disturbance, and throughout the construction period.

### **Invasive Species and Viral Hemorrhagic Septicemia (VHS)**

Adequate precautions should be taken to prevent transporting or introducing invasive species via construction equipment, as provided under chapter NR 40 Wis. Adm. Code. Further information on species classified as Restricted or Prohibited under NR 40 can be found at: <http://dnr.wi.gov/topic/Invasives/classification.html>.

DNR will work with project managers to help identify specific problem areas across the project site and recommend preventive measures. The following Best Management Practices (BMPs) for rights-of-way provide a series of measures that will ensure reasonable precautions are taken throughout the stages of construction: <http://www.wisconsinforestry.org/files/invasiveBMPs/TransportationRoW-BMPs.pdf>.

Any equipment coming into contact with surface waters must be properly cleaned and disinfected to address the spread of invasive species and viruses. Special provisions must require contractors to implement the following measures before and after mobilizing in-water equipment to prevent the spread of VHS, Zebra Mussel, and other invasive species. Contractors should follow *STSP 107-055 Environmental Protection, Aquatic Exotic Species Control*, or protocol found here: [http://dnr.wi.gov/topic/fishing/documents/vhs/disinfection\\_protocols.pdf](http://dnr.wi.gov/topic/fishing/documents/vhs/disinfection_protocols.pdf).

Additional information on invasive species and infested waters can be found at: <http://dnr.wi.gov/lakes/invasives/AISByWaterbody.aspx>

### **Floodplains**

A determination must be made as to whether or not the project lies within a mapped/zoned floodplain. Floodplain impacts should be assessed and/or quantified and appropriate coordination must be carried out in accordance with the DOT/DNR Cooperative Agreement. Coordination must also occur with the Brown County Zoning Program.

## **B. Project Specific Construction Site Considerations**

The following issues should be addressed in the Special Provisions, and the contractor will be required to outline their construction methods in the Erosion Control Implementation Plan (ECIP). An adequate ECIP for the project must be developed by the contractor and submitted to this office for review at least 14 days prior to the preconstruction conference. Erosion control and stormwater measures must adhere to the DNR/DOT Cooperative Agreement, Trans 401, and applicable federal laws.

### **Erosion Control and Storm Water Management**

- Erosion control devices should be specified on the construction plans. All disturbed bank areas should be adequately protected and restored as soon as feasible.
- If erosion mat is used along stream banks, DNR recommends that biodegradable non-netted mat be used (e.g. Class I Type A Urban, Class I Type B Urban, or Class II Type C). Long-term netted mats may cause animals to become entrapped while moving in and out of the stream. Avoid the use of fine mesh matting that is tied or bonded at the mesh intersection such that the openings in the mesh are fixed in size.
- If dewatering is required for any reason, the water must be pumped into a properly selected and sized dewatering basin before the clean/filtered water is allowed to enter any waterway or wetland. The basin must remove suspended solids and contaminants to the maximum extent practicable. A properly designed and constructed dewatering basin must take into consideration maximum pumping volume (gpm or cfs)

and the sedimentation rate for soils to be encountered. Do not house any dewatering technique in a wetland.

- The contractor should restrict the removal of vegetative cover and exposure of bare ground to the minimum amounts necessary to complete construction. Restoration of disturbed soils should take place as soon as conditions permit. If sufficient vegetative cover will not be achieved because of late season construction, the site must be properly winterized.
- All temporary stock piles must be in an upland location and protected with erosion control measures (e.g. silt fence, rock filter-bag berm, etc.). Do not stockpile materials in wetlands, waterways, or floodplains.

### **Structure Removal/Bridge Demolition**

**STSP 203-020**, *Removing Old Structure Over Waterway With Minimal Debris*, will be adequate for this project on all waterway crossings. Please coordinate with DNR early in the design phase of the project if the bridge must be dropped into the waterway before removal.

### **Temporary Structure**

If a temporary bridge is needed during construction, it is recommended that it be a clear span structure located on the side of the waterway that minimized wetland impacts. If the temporary structure is anticipated to be in place for longer than 14 days it should be temporary seeded and mulched.

These requirements should be addressed in the special provisions and require the contractor to outline these construction methods in the ECIP.

### **Asbestos**

A Notification of Demolition and/or Renovation and Application for Permit Exemption, DNR form 4500-113 (chapters NR 406, 410, and 447 Wis. Adm. Code) may be required. Please refer to DOT FDM 21-35-45 and the DNR's notification requirements web page: <http://dnr.wi.gov/topic/Demo/Asbestos.html> for further guidance on asbestos inspections and notifications. Contact Mark Davis, Air Management Specialist 608-266-3658, with questions on the form. The notification must be submitted 10 working days in advance of demolition projects.

This project may require a permit from the U.S. Army Corps of Engineers (ACOE). For further details you will need to contact Jessica Kempke of the ACOE located in the Green Bay office, at (920) 448-2824. All local, state, and federal permits and/or approvals must be obtained prior to commencing construction activities.

The above comments represent the DNR's initial concerns for the proposed project and do not constitute final concurrence. Final concurrence will be granted after further review of refined project plans, and additional consultation if necessary. If any of the concerns or information provided in this letter requires further clarification, please contact this office at (920) 412-0165, or email at [james.doperalski@wisconsin.gov](mailto:james.doperalski@wisconsin.gov).

Sincerely,

James P. Doperalski Jr.  
Environmental Analysis & Review Specialist

Attachment I: Section 106 Screening List

***Pursuant to 36 CFR 800.3 (a)(1) WisDOT (Cultural Resources) has determined the proposed actions for these undertakings (projects) will have no potential to cause effects to historic properties. No further section 106 obligations are required. However, if the proposed actions for an undertaking (project) should change in any way that would involve ground disturbing activities, additional section 106 coordination is required for that undertaking (project).***

RE: Request to Initiate Informal Section 7 Consultation - **May affect, not likely to adversely affect NLEB**; Project ID 9190-20-00/71 and 9190-23-00/71, Brown County, WI

Andrew,

WisDOT is submitting the following information and determination to fulfil Section 7(a)(2) responsibilities under the ESA pertaining to potential impacts to the Dwarf Lake Iris in addition to the Northern long-eared bat. Submittal materials are in the attached PDF.

In accordance with the final 4(d) rule issued for the northern long-eared bat, WisDOT has determined that the proposed activity, described in greater detail below, will not result in prohibited take of the NLEB. Some tree removal is anticipated.

The proposed work for Project 9190-23-00/71 - The asphaltic pavement along this section of STH 32 is deteriorating and is in need of resurfacing. This project will resurface the pavement after replacing several culvert pipes and small box culverts. It will also include surface repairs on several structures. This project will also install barrier and end treatments to protect the piers of the bridge that STH 29 runs on. It will also replace the existing beam guard on two sections and install end treatments that meet current specifications. Lastly this project will include new signing and pavement marking.

The proposed work for Project 9190-20-00/71 - The asphaltic pavement along this section of STH 32 is deteriorating and is in need of resurfacing. This project will resurface the pavement after replacing the aging storm sewer. To extend the life of the deck this project will also complete a concrete deck overlay and surface repairs on bridge B-5-260. The beam guard and end terminals for this structure will be upgraded and brought up to specifications. Lastly this project will include new signing and pavement marking.

In accordance with the streamlined consultation framework, WisDOT intends to rely on the programmatic biological opinion developed for the final 4(d) rule and this submittal to satisfy our Section 7(a)(2) responsibilities.

If you have questions, please contact me at 920-492-7738.

Thanks

Mike

Region Environmental Coordinator  
Wisconsin Department of Transportation  
Northeast Region

## **Northern Long-Eared Bat 4(d) Rule Streamlined Consultation Form**

Federal agencies should use this form for the optional streamlined consultation framework for the northern long-eared bat (NLEB). This framework allows federal agencies to rely upon the U.S. Fish and Wildlife Service's (USFWS) January 5, 2016, intra-Service Programmatic Biological Opinion (BO) on the final 4(d) rule for the NLEB for section 7(a)(2) compliance by: (1) notifying the USFWS that an action agency will use the streamlined framework; (2) describing the project with sufficient detail to support the required determination; and (3) enabling the USFWS to track effects and determine if reinitiation of consultation is required per 50 CFR 402.16.

This form is not necessary if an agency determines that a proposed action will have no effect to the NLEB or if the USFWS has concurred in writing with an agency's determination that a proposed action may affect, but is not likely to adversely affect the NLEB (i.e., the standard informal consultation process). Actions that may cause prohibited incidental take require separate formal consultation. Providing this information does not address section 7(a)(2) compliance for any other listed species.

| <b>Information to Determine 4(d) Rule Compliance:</b>                                                                                                                            | <b>YES</b>                          | <b>NO</b>                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|
| 1. Does the project occur wholly outside of the WNS Zone <sup>1</sup> ?                                                                                                          | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| 2. Have you contacted the appropriate agency <sup>2</sup> to determine if your project is near known hibernacula or maternity roost trees?                                       | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| 3. Could the project disturb hibernating NLEBs in a known hibernaculum?                                                                                                          | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| 4. Could the project alter the entrance or interior environment of a known hibernaculum?                                                                                         | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| 5. Does the project remove any trees within 0.25 miles of a known hibernaculum at any time of year?                                                                              | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| 6. Would the project cut or destroy known occupied maternity roost trees, or any other trees within a 150-foot radius from the maternity roost tree from June 1 through July 31. | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

You are eligible to use this form if you have answered yes to question #1 **or** yes to question #2 **and** no to questions 3, 4, 5 and 6. The remainder of the form will be used by the USFWS to track our assumptions in the BO.

**Project Name:** 1470-25-00 – WIS 42 resurfacing, South County line to the City limits of Kewaunee

**Project Location** (include coordinates if known):

Brown County, Wisconsin (Coordinates are too numerous to list).  
See attachment 1 for project location maps.

<sup>1</sup> <http://www.fws.gov/midwest/endangered/mammals/nleb/pdf/WNSZone.pdf>

<sup>2</sup> See <http://www.fws.gov/midwest/endangered/mammals/nleb/nhisites.html>

<sup>3</sup> If applicable - only needed for federal actions with applicants (e.g., for a permit, etc.) who are party to the consultation.

**Basic Project Description** (provide narrative below or attach additional information):

Project 9190-23-00/71 - The asphaltic pavement along this section of STH 32 is deteriorating and is in need of resurfacing. This project will resurface the pavement after replacing several culvert pipes and small box culverts. It will also include surface repairs on several structures. This project will also install barrier and end treatments to protect the piers of the bridge that STH 29 runs on. It will also replace the existing beam guard on two sections and install end treatments that meet current specifications. Lastly this project will include new signing and pavement marking.

Project 9190-20-00/71 - The asphaltic pavement along this section of STH 32 is deteriorating and is in need of resurfacing. This project will resurface the pavement after replacing the aging storm sewer. To extend the life of the deck this project will also complete a concrete deck overlay and surface repairs on bridge B-5-260. The beam guard and end terminals for this structure will be upgraded and brought up to specifications. Lastly this project will include new signing and pavement marking

The Wisconsin Department of Natural Resources (WDNR) reviewed their Natural Heritage Inventory database on 11/15/2017. In that review, WDNR determined that there are no known NLEB maternity roost trees within 150 feet and no known hibernacula within 0.25 miles of the proposed project (Attachment 2).

Attachment 3 contains the official species list generated using the IPAC tool on 11/15/2017 (Consultation Code: 03E17000-2018-SLI-0209). The effect determinations for the Federally-listed species are in Attachment 4.

| Estimated total acres of timber harvest                                                  |                                     |                                     |
| If known, estimated acres of timber harvest from April 1 to October 31                   |                                     |                                     |
| If known, estimated acres of timber harvest from June 1 to July 31                       |                                     |                                     |
| Does the project include prescribed fire? (if yes, report acreage below)                 | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Estimated total acres of prescribed fire                                                 |                                     |                                     |
| If known, estimated acres of prescribed fire from April 1 to October 31                  |                                     |                                     |
| If known, estimated acres of prescribed fire from June 1 to July 31                      |                                     |                                     |
| Does the project install new wind turbines? (if yes, report capacity in MW below)        | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Estimated wind capacity (MW)                                                             |                                     |                                     |

<sup>4</sup> Any activity that temporarily or permanently removes suitable forested habitat, including, but not limited to, tree removal from development, energy production and transmission, mining, agriculture, etc. (see page 48 of the BO).

<sup>5</sup> If the project removes less than 10 trees and the acreage is unknown, report the acreage as less than 0.1 acre.

<sup>6</sup> If the activity includes tree clearing in June and July, also include those acreage in April to October.

Agency Determination:

By signing this form, the action agency determines that this project may affect the NLEB, but that any resulting incidental take of the NLEB is not prohibited by the final 4(d) rule.

If the USFWS does not respond within 30 days from submittal of this form, the action agency may presume that its determination is informed by the best available information and that its project responsibilities under 7(a)(2) with respect to the NLEB are fulfilled through the USFWS January 5, 2016, Programmatic BO. The action agency will update this determination annually for multi-year activities.

The action agency understands that the USFWS presumes that all activities are implemented as described herein. The action agency will promptly report any departures from the described activities to the appropriate USFWS Field Office. The action agency will provide the appropriate USFWS Field Office with the results of any surveys conducted for the NLEB. Involved parties will promptly notify the appropriate USFWS Field Office upon finding a dead, injured, or sick NLEB.

**Subject:** RE: NLEB check on two projects on WIS 32 in Brown CO

Mike I did a NHI review on November 15, 2017 and did not find any records for the NLEB or the Rusty Patched Bumble Bee.

**We are committed to service excellence.**

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.

**Subject:** NLEB check on two projects on WIS 32 in Brown CO

Jim –

I need a check for NLEB on two projects. 9190-20-00 and 9190-23-00, these are on WIS 32 in Brown CO between Pulaski and highway 29. We looked at wetlands on this stretch this year. I have attached the prelim comments letters for reference.

Thanks

Mike

Consultation Code: 03E17000-2018-SLI-0209

Event Code: 03E17000-2018-E-00486

Project Name: 9190-20-71 and 9190-23-71, WIS 32, Brown CO

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The attached species list identifies any federally threatened, endangered, proposed and candidate species that may occur within the boundary of your proposed project or may be affected by your proposed project. The list also includes designated critical habitat if present within your proposed project area or affected by your project. This list is provided to you as the initial step of the consultation process required under section 7(c) of the Endangered Species Act, also referred to as Section 7 Consultation.

Section 7 of the Endangered Species Act of 1973 requires that actions authorized, funded, or carried out by Federal agencies not jeopardize federally threatened or endangered species or adversely modify designated critical habitat. To fulfill this mandate, Federal agencies (or their designated non-federal representative) must consult with the Service if they determine their project "may affect" listed species or critical habitat.

Under 50 CFR 402.12(e) (the regulations that implement Section 7 of the Endangered Species Act) the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally. You may verify the list by visiting the ECOS-IPaC website <http://ecos.fws.gov/ipac/> at regular intervals during project planning and implementation and completing the same process you used to receive the attached list. As an alternative, you may contact this Ecological Services Field Office for updates.

Please use the species list provided and visit the U.S. Fish and Wildlife Service's Region 3 Section 7 Technical Assistance website at - <http://www.fws.gov/midwest/endangered/section7/s7process/index.html>. This website contains step-by-step instructions which will help you determine if your project will have an adverse effect on listed species and will help lead you through the Section 7 process.

For all **wind energy projects** and **projects that include installing towers that use guy wires or**

**are over 200 feet in height (e.g., communication towers)**, please contact this field office directly for assistance, even if no federally listed plants, animals or critical habitat are present within your proposed project or may be affected by your proposed project.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm>; <http://www.towerkill.com>; and <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html>.

Although no longer protected under the Endangered Species Act, be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.) and Migratory Bird Treaty Act (16 U.S.C. 703 et seq), as are golden eagles. Projects affecting these species may require measures to avoid harming eagles or may require a permit. If your project is near an eagle nest or winter roost area, see our Eagle Permits website at <http://www.fws.gov/midwest/midwestbird/EaglePermits/index.html> to help you determine if you can avoid impacting eagles or if a permit may be necessary.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Counties: Brown, WI

## Endangered Species Act Species

There is a total of 2 threatened, endangered, or candidate species on this species list. Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species. See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

### Mammals

| NAME                                                                                                                                                                                                                             | STATUS     |
