GENERAL NOTES

WHEN THE QUANTITY OF THE ITEM OF BASE COURSE IS MEASURED BY THE TON, THE DEPTH OR THICKNESS WILL DEPEND ON THE DISTRIBUTION OF THE MATERIAL AS DIRECTED BY THE ENGINEER.

ALL CLEARING AND GRUBBING FOR VISION TRIANGLES ARE INCLUDED IN MAINLINE QUANTITIES.

TOPSOIL SHALL BE PLACED ON SLOPES AT LOCATIONS SHOWN ON THE PLAN OR DESIGNATED BY THE ENGINEER TO AN APPROXIMATE THICKNESS OF 4" AT THE TIME OF PLACEMENT. TOPSOIL AND MULCH ALL SLOPES FROM SUBGRADE SHOULDER TO SLOPE INTERCEPT. SEED AND FERTILIZE ALL DISTURBED AREAS OTHER THAN THE ROADBED. TOPSOIL, FERTILIZE, SEED AND MULCH OLD ROAD OBLITERATION.

THE EXACT LOCATION FOR DRIVEWAYS AND LIMITS FOR NEW DRIVEWAYS SHALL BE DETERMINED BY THE ENGINEER IN THE FIELD.

SIDE ROAD AND P.E. CULVERT PIPE TO BE PLACED OUTSIDE THE CLEAR ZONE WHERE RIGHT OF WAY ALLOWS.

CUT AND FILL SLOPES SHALL BE ROUNDED 5 FEET BEYOND THE SLOPE INTERCEPT POINT.

BEARINGS SHOWN ON THE PLANS ARE GRID BEARINGS TO THE NEAREST SECOND.

ALL UTILITIES WILL BE MOVED BY THEIR OWNERS WHERE REQUIRED.

GENERAL NOTES

Details of construction, materials, and workmanship not shown on this drawing shall conform to the pertinent requirements of the Standard Specifications and the applicable Special Provisions.

Variations of the dimensions and designs shown hereon will be permitted providing equivilent capacity and structural integrity are attained, and prior approval of the Engineer is obtained.

Concrete culvert endwalls may not be used with galvanized steel or aluminum culvert pipe or vice versa.

Galvanized steel or aluminum endwalls shall normally be installed on culvert pipe of the same metal. The use of galvanized steel endwalls on aluminum pipes is permitted, provided the two metals at the joint interface are kept separated by a suitable insulating material approximately $\frac{1}{16}$" thick or greater. Such material would be an asphalt impregnated fabric, a sheet plastic, a rubber gasket or other nondegradable material of substantial strength.

When two or more pipe arches with apron endwalls are to be laid adjacent to each other, they shall be separated by the following amount.

Pipes: Total width of apron endwall less the diameter of pipe plus 6 inches.

Pipe Arches: Total width of apron endwall less the span dimension of the pipe arch plus 6 inches.

GENERAL NOTES

Designs may be used interchangeably in combination or separately for any one complete intersection depending upon intersection angle and surfacing of each approach roadway.

Details on this drawing are for minimum design only, and not applicable to special conditions, as shown elsewhere on the plans.

SIDE ROAD SURFACING NOTE

If the side road is not presently paved, pavement shall be placed to the limits shown. In the case where the construction limits are beyond the paving limits, gravel or crushed stone surfacing shall be placed between the paving limits and construction limits.

If the side road is presently paved, new pavement shall be placed to the limits of design as shown and beyond, if necessary, to meet existing pavement.

If the side road is the construction project, the intersection surfacing shall be the same as for the project.

GENERAL NOTES

Details of construction, materials and workmanship not shown on this drawing shall conform to the pertinent requirements of the Standard Specifications and the applicable Special Provisions.

The exact location of the beginning and end of each Guardrail installation shall be as shown on the plans or as directed by the Engineer.

Square anchor alternates will be permitted. Square anchors shall be a minimun of 24 inches x 24 inches.

The shoulder widening to accommodate the anchored end of the guardrail shall be accomplished at the rate of widening not to exceed 15 to 1.

Upon approval of the Engineer, the 6 foot anchor offset may be reduced to nothing for replacement installations where existing conditions will not permit the desirable offset. However, when no offset greater than or equal to 3 feet can be provided, the minimum length of guardrail in advance of an obstacle (obstacle to anchor) shall be 150 feet.

The minimum clearance from the front face of guardrail to obstacle shall be 3 feet unless otherwise shown on contract plans. When clearance is less than 3 feet post spacing shall be reduced to 3 feet - 1 1/2 inches C.C.

The "Post Footing Details At Piers" shall be used when guardrail posts are over structure footings and less than 3 feet - 6 inches of earth is provided over the top of the footing.
