(5) The department will assess QV results by comparing to the appropriate specification limits. If QV test results conform to this special provision, the department will take no further action. If density QV test results are nonconforming, the area shall be reworked until the density requirements of this special provision are met. If the cast density, compressive strength or gradation test results are nonconforming, standard spec 106.5 will apply. Differing QC and QV nuclear density values of more than 1.5 pcf will be investigated and resolved. QV density tests will be based on the appropriate QC Proctor test results, unless the QV and QC Proctor result difference is greater than

3.0 pcf. Differing QC and QV Proctor values of more than 3.0 pcf will be investigated and resolved. Differing QC and QV cast density and compressive strength test values of more than 4% will be investigated and resolved.

### C.4.5.3 Independent Assurance (IA)

(1) Independence assurance is unbiased testing the department performs to evaluate the department's QV and the contractor's QC sampling and testing, including personnel qualifications, procedures, and equipment. The department will perform an IA review according to the department's independent assurance program. That review may include one or more of the following:

1. Split sample testing.
2. Proficiency sample testing.
3. Witnessing sampling and testing.
4. Test equipment calibration checks.
5. Reviewing required worksheets and control charts.
6. Requesting that testing personnel perform additional sampling and testing.

(2) If the department identifies a deficiency, and after further investigation confirms it, correct that deficiency. If the contractor does not correct or fails to cooperate in resolving identified deficiencies, the engineer may suspend placement until action is taken. Resolve disputes as specified in C.4.5.4.

### C.4.5.4 Dispute Resolution

(1) The engineer and contractor should make every effort to avoid conflict. If a dispute between some aspect of the contractor's and the engineer's testing program does occur, seek a solution mutually agreeable to the project personnel. The department and contractor may review the data, examine data reduction and analysis methods, evaluate sampling and testing procedures, and perform additional testing. Use ASTM E 178 to evaluate potential statistically outlying data.

(2) Production test results, and results from other process control testing, may be considered when resolving a dispute.

(3) If the project personnel cannot resolve a dispute, and the dispute affects payment or could result in incorporating non-conforming product or work, the department will use third party testing to resolve the dispute. The department's central office laboratory, or a mutually agreed on independent testing laboratory, will provide this testing. The engineer and contractor will abide by the results of the third party tests. The party in error will pay service charges incurred for testing by an independent laboratory. The department may use third party test results to evaluate the quality of questionable materials and determine the appropriate payment. The department may reject material or otherwise determine the final disposition of nonconforming material as specified in standard spec 106.5.

**C.5 Dampproofing**
Apply dampproofing conforming to standard spec 516 to the final horizontal and vertical surfaces of the LFCF material at locations designated on the plans.

**C.6 Geotechnical Information**
Geotechnical data to be used in the design of the wall is given on the wall plan. After completing wall excavation of the entire reinforced soil zone, notify the department and allow the Regional Geotechnical Engineer two working days to review the foundation.

**D Measurement**
The department will not measure Wall Concrete Panel Mechanically Stabilized Earth LRFD/LFCF. The department will use pay plan quantity according to the Pay Plan Quantity article. No measurement of quantities shall be made in the field. Unless the engineer directs in writing, a change to the limits indicated on the contract plan, wall area constructed above or below these limits will not be measured for payment.

**E Payment**
The department will pay for plan quantities according to the Pay Plan Quantity article at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4720 | Wall Concrete Panel Mechanically Stabilized Earth LRFD/LFCF | SF |

Payment is full compensation for supplying a design and shop drawings; preparing the site, including all necessary excavation and disposal of materials; supplying all necessary wall components to produce a functional system including cap and copings; constructing the retaining system including drainage system; providing and placing LFCF and granular backfill, compacting, developing/completing/documenting the quality management program, performing cast density, compressive strength and compaction testing. Parapets, railings, abutment bodies and other items above the wall cap or coping will be paid for separately. Vehicle barrier and its support will be paid separately.

Any required topsoil, fertilizer, seeding or sodding and mulch will be paid for at the contract unit price of topsoil, fertilizer, seeding or sodding and mulch, respectively.

Dampproofing will be measured and paid for separately in accordance to standard spec 516.

## 382. Wall Wire Faced Mechanically Stabilized Earth LRFD/QMP, Item SPV.0165.4730.

**A Description**
This special provision describes designing, furnishing materials and erecting a permanent earth retention system in accordance to the lines, dimension, elevations and details as shown on the plans and provided in the contract. The design life of the wall and all wall components shall be 75 years minimum.

This special provision describes the quality management program (QMP) for MSE walls. A quality management program is defined as all activities, including process control, inspection, sampling and testing, and necessary adjustments in the process that are related to the construction of the MSE wall, which meets all the requirements of this provision.

This special provision describes contractor quality control (QC) sampling and testing for backfill density testing, documenting those results, and documenting related production and placement process changes. This special provision also describes department quality verification (QV), independent assurance (IA), and dispute resolution.

Chapter 8 of the department's construction and materials manual (CMM) provides additional detailed guidance for QMP work and describes sampling and testing procedures. The contractor may obtain the CMM from the department's web site at:
http://wisconsindot.gov/Pages/doing-bus/eng-consultants/cnslt-rsrces/rdwy/cmm.aspx

**B Materials**

**B.1 Proprietary Wire Faced Mechanically Stabilized Earth Wall Systems**

The supplied wall system must be from the department's approved list of Wire Faced Mechanically Stabilized Earth Wall systems (Wire Faced MSE Walls).

Proprietary wall systems may be used for this work, but must conform to the requirements of this specification and be pre-approved for use by the department's Bureau of Structures, Structures Design Section. The department maintains a list of pre-approved Wire Faced Mechanically Stabilized Earth Wall systems. The name of the pre-approved proprietary wall system selected shall be furnished to the engineer within 25 days after the award of contract.

To receive pre-approval, the retaining wall system must comply with all pertinent requirements of this provision. Applications for pre-approval may be submitted at any time. Applications must be prepared in accordance to the requirements of Chapter 14 of the department's current LRFD Bridge Manual. Information and assistance with the pre-approval process can be obtained by contacting the Structures Design Section in Room 601 of the Hill Farms State Transportation Building in Madison or by calling (608) 266-8494.

**B.2 Design Requirements**

It is the responsibility of the contractor to supply a design and supporting documentation as required by this special provision for review by the department to show the proposed wall design is in compliance with the design specifications. Four copies of the following shall be submitted to the engineer for review and acceptance no later than 60 days from the date of notification to proceed with the project.

The plans and shop drawings shall be prepared on reproducible sheets 11 inch x 17 inch, including borders. Each sheet shall have a title block in the lower right corner. The title block shall include the project identification number and structure number. Design

calculations and notes shall be on 8 ½ inch x 11 inch sheets, and shall contain the project identification number, name or designation of the wall, date of preparation, initials of designer and checker, and page number at the top of the page. All plans, shop drawings, and calculations shall be signed, sealed and dated by a professional engineer licensed in the State of Wisconsin.

The design of the Wire Faced MSE Walls shall be in compliance with the *AASHTO LRFD Bridge Design Specifications 5th Edition 2010*, (AASHTO LRFD) with latest interim specifications for Mechanically Stabilized Earth Walls, WisDOT's current *Standard Specifications for Highway and Structure Construction* (Standard Specifications), Chapter 14 of the WisDOT LRFD Bridge Manual and standard engineering design procedures as determined by the department. Loads, load combinations, load and resistance factors shall be as specified in AASHTO LRFD Section 11. The associated resistance factors shall be defined in accordance to Table 11.5.6-1 LRFD.

Design and construct the walls in accordance to the lines, grades, heights and dimensions shown on the plans, as herein specified, and as directed by the engineer. If the wall is installed in front of a bridge abutment or wing, it shall also be designed to resist the applied abutment/bridge lateral forces specified on the contract plans.

Walls parallel to supporting highway traffic shall be designed for the effects of highway surcharge loading equivalent of 2 feet soil surcharge weight or 240 psf. The design shall also consider the traffic barrier impact where applicable. Walls that do not carry highway traffic shall be designed for a live load surcharge of 100 psf in accordance to Chapter 14 of the WisDOT LRFD Bridge Manual or as stated on the plans.

A maximum value of the angle of internal friction of the wall backfill material used for design shall be assumed to be 30 degrees without a certified report of tests. If a certified report of tests yields an angle of internal friction greater than 30 degrees, the larger test value may be used for design, up to a maximum value of 36 degrees.

An external stability check at critical wall stations showing Capacity Demand Ratios (CDR) for sliding, eccentricity, and bearing checks is performed by the department and are provided in the wall plans.

The design of the Wire Faced MSE Walls by the contractor shall consider the internal and compound stability of the wall mass in accordance to AASHTO LRFD 11.10.6. The internal stability shall include soil reinforcement pullout, soil reinforcement rupture, and panel-reinforcement connection failure at each soil reinforcement level. The design shall be performed using the Simplified Method or Coherent Gravity Method. Calculations for factored stresses and resistances shall be based upon assumed conditions at the end of the design life. Compound stability shall be computed for the applicable strength limits.

The minimum embedment of the Wire Faced MSE wall shall be 1 foot 6 inches, or as given on the contract plan. Frost depth shall not be considered. Additional embedment may be detailed by the contractor, but will not be measured for payment. The wall facings

shall be designed in accordance to AASHTO 11.10.2.3. A fine metallic screen and a geotextile filter fabric shall be used at the front face of the wall to retain the fines of the soil mass.

The nominal long term design strength to be used in steel reinforcement and connector design shall consider the corrosion losses and based upon conditions at the end of the design life. The minimum length of soil reinforcement measured from the back face of the wall shall be equal to 0.7 of the wall height or as shown on the plan. In no case shall this length be less than 8 feet. The soil reinforcement shall be the same length from the bottom to the top of each wall section. All soil reinforcement layers shall be connected to facings. The soil reinforcement shall extend 3 feet beyond the theoretical failure plane in all cases. The maximum vertical spacing of soil reinforcement layers shall be 24 inches. The uppermost layer of the reinforcement shall be located between 6" and 12" below the bottom of an overlying slab, footing or top of the wall. The upper layers of the soil reinforcement shall also be checked to verify that they have sufficient tensile resistance against traffic barrier impact where applicable.

Soil reinforcement shall be fabricated or designed to avoid piling, drainage structures or other obstacles in the fill without field modifications. Cutting or altering of the basic structural section of either the strip or grid at the site is prohibited unless approved by the Structures Design Section. A minimum clearance of 3" shall be maintained between any obstruction and reinforcement unless otherwise approved by the Structures Design Section. Splicing steel reinforcement is not allowed unless approved by the Structures Design Section.

Submit the following to the engineer for review: complete design calculations, explanatory notes, supporting materials, specifications, and detailed plans and shop drawings for the proposed wall system. Sample analyses and hand output shall be submitted to verify the output by the software. The design calculations and notes shall clearly indicate the Capacity to Demand Ratios (CDR) for all internal stabilities as defined in AASHTO LRFD.

The wall submittal package shall be submitted electronically to the engineer and the Structures Design Section. Submit all required information no later than 30 days prior to beginning construction of the wall. The detailed plans and shop drawings shall include all details, dimensions, quantities and cross-sections necessary to construct the walls.

**B.3 Wall System Components**

Materials furnished for wall system components under this contract shall conform to the requirements of this specification. All certifications related to material and components of the wall systems specified in this subsection shall be submitted to the engineer.

**B.3.1 Steel Components**

All steel components of permanent Wire-Faced MSE walls shall be galvanized in accordance to ASTM A-123. Provide steel reinforcement that meets the following requirements:

- Welded Wire Fabric Soil Reinforcement

Provide shop fabricated welded wire reinforcement from cold drawn steel wire that has a yield stress of 65,000 psi and conforming to the minimum requirements of ASTM A-82 and be welded into the finished configuration in accordance to ASTM A-185. A minimum galvanization coating of 2 oz/ft$^2$ or 3.4 mils thickness is required. Replace welded wire fabric that has been damaged during handling, placing or backfilling at the direction of the engineer, at no expense to the department.

- Steel Reinforcing Strips and Tie Strips

As an alternate to Welded Wire Reinforcing mesh, provide Steel Reinforcing strips or ladder Reinforcing strips or equal, hot-rolled from bars, to the required shape and dimensions meeting the requirements of ASTM A-572 Grade 65 minimum and galvanized to a minimum thickness of 3.4 mils. Tie strips shall be shop fabricated of hot-rolled steel meeting the requirements of ASTM A-1011 Grade 50.

- Welded Wire Fabric Facing Panels

Provide welded wire fabric that is used to fabricate the facings of the wire-Faced wall that has a yield stress of 65,000 psi. All steel shall be shop fabricated of cold drawn steel wire conforming to the minimum requirements of ASTM A-82 and be welded into the finished configuration in accordance to ASTM A-185. Replace welded wire fabric that has been damaged during handling, placing or backfilling at the direction of the engineer, at no expense to the department.

- Fasteners

Galvanized high strength bolts meeting the requirements of AASHTO M164 or equivalent.

- Connector Pins and Mat Bars

Connector pins and mat bars fabricated from cold drawn steel wire meeting the requirements of ASTM A-82 and galvanized to according to ASTM 123 to a minimum thickness of 3.4 mils.

- Metallic Screen

Provide a stainless steel or galvanized steel metallic screen per AASHTO M-111. The metallic screen should have an approximate opening of ¼" and be made of 0.025" (minimum) gauge wire.

**B.3.2 Geotextile Filter Fabric**

Geotextile filter fabric shall be used behind the metallic screen. Use geotextile as recommended by the wall manufacturer. If none is recommended, use Type DF (schedule B) as shown in standard spec 645 or as specified on the contract plans.

**B.3.3 Backfill**

Furnish and place backfill for Wire- Faced MSE wall as shown on the plans and as herein provided.

Provide and use material that consists of natural sand or a mixture of sand with gravel, crushed gravel or crushed stone. It shall not contain foundry sand, bottom ash, blast furnace slag, crushed/recycled concrete, crushed/milled asphaltic concrete or other potentially corrosive material.

Provide material that conforms to the following gradation requirements as per AASHTO T27.

| Sieve Size | % by Weight Passing |
|---|---|
| 1 inch | 100 |
| No. 40 | 0-60 |
| No. 200 | 0-15 |

The material shall have a liquid limit not greater than 25, as per AASHTO T89, and a plasticity index not greater than 6, as per AASHTO T90. Provide the percent by weight, passing the #4 sieve.

In addition, backfill material shall meet the following requirements.

| Test | Method | Value |
|---|---|---|
| pH | AASHTO T-289 | 5 – 10.0 |
| Sulfate content | AASHTO T-290 | 200 ppm max. |
| Chloride content | AASHTO T-291 | 100 ppm max. |
| Electrical Resistivity | AASHTO T-288 | 3000 ohm/cm min. |
| Organic Content | AASHTO T-267 | 1.0% max. |
| Angle of Internal Friction | AASHTO T-236* | 30 degrees min. (At 95.0% of maximum density and optimum moisture, per AASHTO T99, or as modified by C.1) |

*If the amount of P-4 material is greater than 60%, use AASHTO 236 with a standard-size shear box. Test results of this method may allow the use of larger angles of internal friction, up to the maximum allowed by this specification.

If the amount of P-4 material is less than or equal to 60%, two options are available to determine the angle of internal friction. The first method is to perform a fractured faces count, per ASTM 5821, on the R-4 material. If more than 90% of the material is fractured on one face and more than 50% is fractured on two faces, the material meets the specifications and the angle of internal friction can be assumed to be 30 degrees. The second method allows testing all P-1" material, as per AASHTO T-236, with a large shear box. Test results of this second method may allow the use of larger angles of internal friction, up to the maximum allowed by this specification.

Prior to placement of the backfill, obtain and furnish to the engineer a certified report of test results that the backfill material complies with the requirements of this specification. Specify the method used to determine the angle of internal friction. This certified report of test shall be less than 6 months old. Tests will be performed by a certified independent laboratory. In addition, when backfill characteristics and/or sources change, provide a certified report of tests for the new backfill material. Additional certified report of tests (except Angle of Internal Friction test), are also required. These additional backfill tests may be completed at the time of material production or material placement, with concurrence of the engineer. If this additional testing is completed at the time of material production, complete testing for every 2000 cubic yards of backfill or portion thereof. If this additional testing is completed at the time of material placement, complete testing for every 2000 cubic yards of backfill, or portion thereof, used per wall. All certified report of these test results shall be less than 6 months old and performed by a certified independent laboratory.

## C Construction

### C.1 Methods

All excavation and preparation of the foundation for the Wire-Faced Mechanically Stabilized Earth wall shall be in accordance to standard spec 206. The volume of excavation covered is limited to the width of the reinforced mass and to the depth of the bottom of the wall unless shown or noted otherwise on the plan. At the end of each working day, provide good temporary drainage such that the backfill shall not become contaminated with run-off soil or water if it is should rain. Do not stockpile or store any materials or large equipment within 10 feet of the back of the wall.
Stagger vertical joints in the welded wire facing.

Compact all backfill behind the wall as specified in standard spec 207.3.6. Compact the backfill to 95.0% of maximum dry density as determined by AASHTO T-99 or as modified as follows. If the gradation of the granular backfill is such that the P-200 material is less than 7% and the P-40 is less than 30%, a one-point Proctor test can be conducted in place of the 5-point Proctor. To complete this one-point test, compact the sample at a moisture content of 6%, then compute the actual (as-tested) sample moisture after completion of the test. Use Method B or D, and perform this test without removing oversize particles and without correction for coarse particles, as per AASHTO T224. The one-point as-tested moisture content represents the optimum moisture, and the measured one-point density represents the maximum wet density of the material. From these values, the maximum dry density can be computed.

Ensure adequate moisture is present in the backfill during placement and compaction to prevent segregation and to help achieve compaction.

Compaction of backfill within 3 feet of the back face of the wall should be accomplished using lightweight compaction devices. Use of heavy compaction equipment or vehicles should be avoided within 3 feet of the wall face.

Erect welded wire facing and other associated elements according to the wall manufacturer's construction guide. Place and compact the MSE backfill to the level of the next higher layer of MSE reinforcement before placing the MSE reinforcement or connecting it to the wall facing. Place remaining courses in vertical or battered positions as shown on the contract plans.

The MSE reinforcement shall lay horizontally on top of the most recently placed and compacted layer of MSE backfill. Bending of MSE reinforcement that result in a kink in the reinforcement shall not be allowed. If skewing of the reinforcement is required due to obstruction in the reinforced fill, the maximum skew angle shall not exceed 15 degrees from the normal position unless a greater skew angle is shown on the wall shop drawings. The adequacy of the skewed reinforcement in such a case shall be addressed by supporting calculations.

**C.2 Tolerances**

- The overall vertical tolerance of the wall and the horizontal alignment tolerance shall not exceed 2 inches per 10 feet for permanent installations.

- Where a cast-in-place facing or a precast concrete panel facing is installed, the overall vertical tolerance shall not exceed ±1 inch or as shown on the contract plans.

- For battered wire facing, the final deviation from the design batter shall be within ±3/4 inch for each 10 feet of battered wall height.

- The offset limit between consecutive rows of facing shall not exceed one inch.

**C3 Quality Management Program**

**C.3.1 Quality Control Plan**

Submit a comprehensive written quality control plan to the engineer at or before the pre-construction meeting. Do not perform MSE wall construction work before the engineer reviews and accepts the plan. Construct the project as the plan provides.

Do not change the quality control plan without the engineer's review and acceptance. Update the plan with changes as they become effective. Provide a current copy of the plan to the engineer and post in the contractor's laboratory as changes are adopted. Ensure that the plan provides the following elements:

- An organizational chart with names, telephone numbers, current certifications and/or titles, and roles and responsibilities of QC personnel.
- The process used to disseminate QC information and corrective action efforts to the appropriate persons. Include a list of recipients, the communication process that will be used, and action time frames.
- A list of source locations, section and quarter descriptions, for all aggregate materials requiring QC testing.
- Descriptions of stockpiling and hauling methods.

- An outline for resolving a process control problem. Include responsible personnel, required documentation, and appropriate communication steps.
- Location of the QC laboratory, retained sample storage, and other documentation.
- A summary of the locations and calculated quantities to be tested under this provision.

**C.3.2 Quality Control Personnel**
Perform the quality control sampling, testing, and documentation required under this provision using HTCP certified technicians. Have a HTCP Level I Grading Technician, Level I Aggregate Technician, or Assistant Certified Aggregate Technician (ACT) present at the each grading site during all wall backfill placement, compaction, and nuclear testing activities. Have a HTCP Level I Nuclear Density Technician or Assistant Certified Nuclear Density Technician (ACT) perform field density and field moisture content testing.

If an Assistant Certified Technician (ACT) is performing sampling or testing, a certified technician must coordinate and take responsibility for the work an ACT performs. Have a certified technician ensure that all sampling and testing is performed correctly, analyze test results, and post resulting data. No more than one ACT can work under a single certified technician.

**C.3.3 Equipment**
Furnish the necessary equipment and supplies for performing quality control testing. Ensure that all testing equipment conforms to the equipment specifications applicable to the required testing methods. The engineer may inspect the measuring and testing devices to confirm both calibration and condition. Calibrate all testing equipment according to the CMM and maintain a calibration record at the laboratory.

Furnish nuclear gauges from the department's approved product list at http://www.atwoodsystems.com/materials. Ensure that the gauge manufacturer or an approved calibration service calibrates the gauge the same calendar year it is used on the project. Retain a copy of the calibration certificate with the gauge.

Conform to ASTM D 6938 and CMM 8.15 for density testing and gauge monitoring methods. Perform nuclear gauge measurements using gamma radiation in the backscatter or direct transmission position. Perform each test for 4 minutes of nuclear gauge count time.

Split each Proctor sample and identify so as to provide comparison with the department's test results. Unless the engineer directs otherwise, retain the QC split samples for 14 calendar days and promptly deliver the department's split samples to the department

**C.3.4 Quality Control (QC) Testing**
Perform compaction testing on the backfill. Conform to CMM 8.15 for testing and gauge monitoring methods. Conduct testing at a minimum frequency of 1 test per 150 cubic yards of backfill, or major portion thereof. A minimum of one test for every lift is

required. Deliver documentation of all compaction testing results to the engineer at the time of testing.

Perform 1 gradation test every 750 cubic yards of fill and one 5-point Proctor test (or as modified in C.1) every 2000 cubic yards of fill. Provide the region split samples of both within 72 hours of sampling, at the region laboratory. Test sites shall be selected using ASTM Method D3665. Provide Proctor test results to the engineer within 48 hours of sampling. Provide gradation test results to the engineer within 24 hours of sampling.

### C.3.5 Department Testing

#### C.3.5.1 General

(1) The department will conduct verification testing to validate the quality of the product and independent assurance testing to evaluate the sampling and testing. The department will provide the contractor with a listing of names and telephone numbers of all QV and IA personnel for the project, and provide test results to the contractor within 2 business days after the department obtains the sample.

#### C.3.5.2 Quality Verification (QV) Testing

(1) The department will have an HTCP technician, or ACT working under a certified technician, perform QV sampling and testing. Department verification testing personnel must meet the same certification level requirements specified in C.3.2 for contractor testing personnel for each test result being verified. The department will notify the contractor before sampling so the contractor can observe QV sampling.

(2) The department will conduct QV tests at the minimum frequency of 30% of the required contractor density, Proctor and gradation tests.

(3) The department will locate density tests and gradation samples randomly, at locations independent of the contractor's QC work. The department will split each Proctor and gradation QV sample, testing half for QV, and retaining the remaining half for 10 business days.

(4) The department will conduct QV Proctor and gradation tests in a separate laboratory and with separate equipment from the contractor's QC tests. The department will use the same methods specified for QC testing.

(5) The department will assess QV results by comparing to the appropriate specification limits. If QV test results conform to this special provision, the department will take no further action. If density QV test results are nonconforming, the area shall be reworked until the density requirements of this special provision are met. If the gradation test results are nonconforming, standard spec 106.5 will apply. Differing QC and QV nuclear density values of more than 1.5 pcf will be investigated and resolved. QV density tests will be based on the appropriate QC Proctor test results, unless the QV and QC Proctor result difference is greater than 3.0 pcf. Differing QC and QV Proctor values of more than 3.0 pcf will be investigated and resolved.

### C.3.5.3 Independent Assurance (IA)

(1) Independence assurance is unbiased testing the department performs to evaluate the department's QV and the contractor's QC sampling and testing, including personnel qualifications, procedures, and equipment. The department will perform an IA review according to the department's independent assurance program. That review may include one or more of the following:

1. Split sample testing.
2. Proficiency sample testing.
3. Witnessing sampling and testing.
4. Test equipment calibration checks.
5. Reviewing required worksheets and control charts.
6. Requesting that testing personnel perform additional sampling and testing.

(2) If the department identifies a deficiency, and after further investigation confirms it, correct that deficiency. If the contractor does not correct or fails to cooperate in resolving identified deficiencies, the engineer may suspend placement until action is taken. Resolve disputes as specified in C.3.5.4.

### C.3.5.4 Dispute Resolution

(1) The engineer and contractor should make every effort to avoid conflict. If a dispute between some aspect of the contractor's and the engineer's testing program does occur, seek a solution mutually agreeable to the project personnel. The department and contractor may review the data, examine data reduction and analysis methods, evaluate sampling and testing procedures, and perform additional testing. Use ASTM E 178 to evaluate potential statistically outlying data.

(2) Production test results, and results from other process control testing, may be considered when resolving a dispute.

(3) If the project personnel cannot resolve a dispute, and the dispute affects payment or could result in incorporating non-conforming product or work, the department will use third party testing to resolve the dispute. The department's central office laboratory, or a mutually agreed on independent testing laboratory, will provide this testing. The engineer and contractor will abide by the results of the third party tests. The party in error will pay service charges incurred for testing by an independent laboratory. The department may use third party test results to evaluate the quality of questionable materials and determine the appropriate payment. The department may reject material or otherwise determine the final disposition of nonconforming material as specified in standard spec 106.5.

## C.4 Geotechnical Information

Geotechnical data to be used in the design of the wall is given on the wall plan. After completing wall excavation of the entire reinforced soil zone, notify the department and allow the Regional Soils Engineer two working days to review the foundation.

**D Measurement**

The department will not measure Wire Faced Mechanically Stabilized Earth Wall. The department will use pay plan quantity according to the Pay Plan Quantity article. No other measurement of quantities shall be made in the field. Unless the engineer directs in writing, a change to the limits indicated on the contract plan, wall area constructed above or below these limits will not be measured for payment.

**E Payment**

The department will pay for plan quantities according to the Pay Plan Quantity article at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4730 | Wall Wire Faced Mechanically Stabilized Earth LRFD/QMP | SF |

Payment is full compensation for supplying a design and shop drawings; preparing the site, including all necessary excavation and disposal of materials; supplying all necessary wall components to produce a functional system constructing the retaining system, including drainage system; providing backfill, backfilling, compacting, developing/completing/documenting the quality management program, performing compaction testing; and for furnishing all tools, labor, equipment, and incidentals necessary to complete the contract work. Parapets, railings, abutment bodies and other items above the wall cap or coping will be paid for separately. Vehicle barrier and its support will be paid separately.

Any required topsoil, fertilizer, seeding or sodding and mulch will be paid for at the contract unit price of topsoil, fertilizer, seeding or sodding and mulch, respectively. (20140716)

## 383. Wall Modular Block Mechanically Stabilized Earth LRFD, Item SPV.0165.4740.

**A Description**

This special provision describes designing, furnishing materials and erecting a permanent earth retention system in accordance to the lines, dimension, elevations and details as shown on the plans and provided in the contract. The design life of the wall and all wall components shall be 75 years.

**B Materials**

**B.1 Proprietary Mechanically Stabilized Earth Modular Block Wall Systems**

The supplied wall system must be from the department's approved list of modular block mechanically stabilized earth wall systems.

Proprietary wall systems may be used for this work, but must conform to the requirements of this specification and be pre-approved for use by the department's Bureau of Structures, Structures Design Section. The department maintains a list of pre-approved systems of retaining walls. To be eligible for use on this project, a system must have been

pre-approved and added to that list prior to the bid opening date. The name of the companies supplying pre-approved material shall be furnished within 25 days after the award of contract.

Applications for pre-approval may be submitted at any time. Applications must be prepared in accordance to the requirements of current Chapter 14 of the department's LRFD Bridge Manual. Information and assistance with the pre-approval process can be obtained by contacting the Structures Design Section in Room 601 of the Hill Farms State Transportation Building in Madison or by calling (608) 266-8494.

**B.2 Design Requirements**

It is the responsibility of the contractor to supply a design and supporting documentation as required by this special provision for review by the department to show the proposed wall design is in compliance with the design specifications.

The design/shop plans shall be prepared on reproducible sheets 11 inch x 17 inch, including borders. Each sheet shall have a title block in the lower right corner. The title block shall include the project identification number and structure number. Design calculations and notes shall be on 8 ½ inch x 11 inch sheets, and shall contain the project identification number, name or designation of the wall, date of preparation, initials of designer and checker, and page number at the top of the page. All plans and calculations shall be signed, sealed and dated by a professional engineer licensed in the State of Wisconsin.

The wall shall be designed for the heights shown on the plans. The design shall be in compliance with the *AASHTO LRFD Design Specifications* 5th *Edition* 2010 (AASHTO LRFD) with latest interim specifications for Mechanically Stabilized Earth Walls, WisDOT's current *Standard Specifications for Highway and Structure Construction (*Standard Specifications), Chapter14 of the WisDOT LRFD Bridge Manual and standard design procedures as determined by the department. Loads, load combinations and load and resistance factors shall be as specified in AASHTO LRFD Section 11. The associated resistance factors shall be defined in accordance to Table 11.5.6-1 in AASHTO LRFD.

The design shall include a minimum overburden surcharge of 100 psf in accordance to Chapter 14 of the WisDOT LRFD Bridge Manual or as shown on the plans. The maximum value of the angle of internal friction of the wall backfill material used for design shall be assumed to be 30 degrees without a certified report of tests. If a certified report of tests yields an angle of internal friction greater than 30 degrees, the larger test value may be used for design, up to a maximum value of 36 degrees.

An external stability check at critical wall stations is performed by the department or its design consultant and the Capacity Demand Ratio (CDR) for sliding, eccentricity, and bearing check is provided by the department or its consultant and shown on the plans.

The design of the Wall Modular Block Mechanically Stabilized Earth shall consider the internal stability of the wall mass (tensile stress, pullout resistance, and tensile stress at the connection with the facing) within each layer of reinforcement for the applicable strength limit and extreme event limit states. Maximum factored loads applied to reinforcements for pullout and the connection to the wall face shall be calculated using the Simplified Method or Coherent Gravity Method, as presented in AASHTO LRFD. In addition, compound stability shall be computed for the applicable strength limit and extreme event limit states in accordance to AASHTO LRFD.

The minimum embedment to the top of the leveling pad shall be as specified in the plans. Potential depth of frost penetration at the wall location shall not be considered in designing the wall for depth of leveling pad.

100% of the soil reinforcement shall be connected to the wall facings. The minimum length of soil reinforcement measured from the back face of the wall shall be equal to 0.7 of the wall height or as shown on the plans. In no case shall this length be less than 8 feet. The soil reinforcement shall extend a minimum of 3 feet beyond the theoretical failure plane in all cases. The maximum vertical spacing of soil reinforcement layers shall be two times the block depth (front face to back face) or 32 inches, whichever is less. The first (bottom) layer of reinforcement shall be placed no further than 12 inches above the top of the leveling pad or the height of the block, but at least one block height above the leveling pad. The last (top) layer of soil reinforcement shall be no further than 21 inches below the top of the uppermost block.

Submit the following to the engineer for review: complete design calculations, explanatory notes, supporting materials, specifications, and detailed plans and shop drawings for the proposed wall system. The design calculations and notes shall clearly indicate the Capacity to Demand Ratios (CDR) for all internal stabilities as defined in AASHTO LRFD.

The wall submittal package shall be submitted electronically to the engineer and Structures Design Section. Submit all required information no later than 30 days prior to beginning construction of the wall. The detailed plans and shop drawings shall include all details, dimensions, quantities and cross-sections necessary to construct the walls.

### B.3 Wall System Components

Materials furnished under this contract shall conform to the requirements of this specification. All certifications related to material and components of the wall systems specified in this subsection shall be submitted to the engineer.

#### B.3.1 Leveling Pad

The leveling pad shall step to follow the general slope of the ground line. The leveling pad steps shall keep the bottom of the wall below the minimum embedment. Additional embedment that is greater than the minimum embedment will not be measured for payment. The leveling pad shall be as wide as the proposed blocks or a minimum of 12 inches, whichever is greater. The bottom row of blocks shall be horizontal and 100% of the block surface shall bear on the leveling pad.

Provide a 6 inches deep by 12 inch (minimum) wide wall leveling pad that consists of poured concrete masonry, Grade A , A-FA, A-S, A-T, A-IS, or A-IP concrete conforming to standard spec 501 as modified in standard spec 716. Provide QMP for leveling pad concrete as specified in the standard spec. A concrete leveling pad shall be provided in following scenarios:

a. When the wall height measured from the top of the leveling pad to the top of the wall exceeds 5 feet at any point along the entire wall length.
b. a structure number has been assigned (such as R-XX-XXX), regardless of wall height.

Additionally, for walls that are less than or equal to 5 feet in height and do not have a wall number assigned to them, a compacted 1 foot deep by 2 foot wide leveling pad made from base aggregate dense 1¼-inch in conformance with standard spec 305 may be used.

### B.3.2 Wall Facing

Wall facing units shall consist of precast modular concrete blocks. All units shall incorporate a mechanism or devices that develop a mechanical connection between vertical block layers. Units that are cracked, chipped, or have other imperfections in accordance to ASTM C1372, or have excessive efflorescence shall not be used within the wall. A single block type and style shall be used throughout each wall. The color and surface texture of the block shall be as given on the plan or chosen by the engineer.

The top course of facing units shall be a solid precast concrete unit designed to be compatible with the remainder of the wall. The finishing course shall be bonded to the underlying facing units with a durable, high strength, flexible adhesive compound compatible with the block material. A formed cast-in-place concrete cap may also be used to finish the wall. A cap of this type shall be designed to have texture, color, and appearance that complement the remainder of the wall. The vertical dimension of the cap shall not be less than 3½ inches. Expansion joints shall be placed in the cap to correspond with each 24 inch change in vertical wall height and at maximum spacing of 10 feet. Concrete for all cast-in-place caps shall be Grade A and shall conform to the requirements of standard spec 501.

Block dimensions may vary no more than ±1/8 inch from the standard values published by the manufacturer in accordance to ASTM C1372. Blocks must have a minimum depth (front face to back face) of 12 inches. The minimum front face thickness of blocks shall be 4 inches measured perpendicular from the front face to inside voids greater than 4 square inches. The minimum allowed thickness of any other portions of the block is 1¾ inches. The front face of the blocks shall conform to plan requirements for color, texture, or patterns.

Cementitious materials and aggregates for modular blocks shall conform to the requirements of ASTM C1372 Section 4.1 and 4.2. Modular blocks shall meet the following requirements.

| Test | Method | Requirement |
|---|---|---|
| Compressive Strength (psi) | ASTM C140 | 5000 min. |
| Water Absorption (%) | ASTM C140 | 6 max. |
| Freeze-Thaw Loss (%)<br>40 cycles, 5 of 5 samples<br>50 cycles, 4 of 5 samples | ASTM C1262[1] | <br>1.0 max.[2]<br>1.5 max.[2] |

[1] Test shall be run using a 3% saline solution.

[2] Test results that meet either of the listed requirements for Freeze-Thaw Loss are acceptable.

All blocks shall be certified as to strength, absorption, and freeze-thaw requirements unless, due to contract changes after letting, certified blocks are not available when required. At the time of delivery of certified blocks, furnish the engineer a certified test report from a department-approved independent testing laboratory for each lot of modular blocks. The certified test report shall clearly identify the firm conducting the sampling and testing, the type of block, the date sampled, the name of the person who conducted the sampling, the represented lot, the number of blocks in the lot, and the specific test results for each of the stated requirements of this specification. The tests should have been conducted not more than 18 months prior to delivery. A lot shall not exceed 5000 blocks or fraction thereof produced in day. The certified test results will represent all blocks within the lot. Each pallet of blocks delivered shall bear lot identification information. Block lots that do not meet the requirements of this specification or blocks without supporting certified test reports will be rejected and shall be removed from the project at no expense to the department.

A department-approved independent testing laboratory shall control and conduct all modular block sampling and testing for certification. Prior to sampling, the manufacturer's representative shall identify all pallets of modular blocks contained in each lot. All pallets of blocks within the lot shall be numbered and marked to facilitate random sample selection.

The representative of the independent testing laboratory shall identify five pallets of blocks by random numbers and shall then select one block from each of these pallets. Solid blocks used as a finishing or top course shall not be selected. The selected blocks shall remain under the control of the person who conducted the sampling until shipped or delivered to the testing laboratory. All pallets of blocks within a lot shall be strapped or wrapped to secure the contents and tagged or marked for identification. The engineer will reject any pallet of blocks delivered to the project without intact security measures. At no expense to the department, the contractor shall remove all rejected blocks from the project.

The department may conduct testing of certified or non-certified modular blocks lots delivered to the project. The department will not conduct freeze-thaw testing on blocks less than 45 days old. If a random sample of five blocks of any lot tested by the department fails to meet any of the requirements of this specification (nonconforming), the contractor shall remove from the project site all blocks from the failed lot not installed in the finished

work at no cost to the department, unless the engineer allows otherwise. Nonconforming blocks installed in the finished work will be considered approved by the department as stated in standard spec 106.5(2) and any adjustment to the contract price will not exceed the price of the blocks charged by the supplier.

**B.3.3 Geogrids**

Geogrid supplied as reinforcing members shall be manufactured from long chain polymers limited to polypropylene, high-density polyethylene, polyaramid, and polyester. Geogrids shall form a uniform rectangular grid of bonded, formed, or fused polymer tensile strands crossing with a nominal right angle orientation. The minimum grid aperture shall be 0.5 inch. The geogrid shall maintain dimension stability during handling, placing, and installation. The geogrid shall be insect, rodent, mildew, and rot resistant. The geogrid shall be furnished in a protective wrapping that shall prevent exposure to ultraviolet radiation and damage from shipping or handling. The geogrid shall be kept dry until installed. Each roll shall be clearly marked to identify the material contained.

The wall supplier shall provide the nominal long-term design strength ($T_{al}$) and nominal long-term connection strength, $T_{alc}$ as discussed below.

Nominal Long-Term Design Strength ($T_{al}$)

The wall supplier shall supply the nominal long-term design strength ($T_{al}$) used in the design for each reinforcement layer and shall be determined by dividing the Ultimate Tensile Strength ($T_{ult}$) by the factors $RF_{ID}$, $RF_{CR}$, $RF_{D}$.

Hence,

$$T_{al} = \frac{T_{ult}}{RF_{ID} \, x \, RF_{CR} \, x \, RF_{D}}$$

where:

$T_{ult}$ = ultimate tensile strength of the reinforcement determined from wide width tensile tests (ASTM D6637) for geogrids based on the minimum average roll value (MARV) for the product

$RF_{ID}$ = strength reduction factor to account for installation damage to the reinforcement. In no case shall $RF_{ID}$ be less than 1.1.

$RF_{CR}$ = strength reduction factor to prevent long-term creep rupture of the reinforcement. In no case shall $RF_{CR}$ be less than 1.2.

$RF_{D}$ = strength reduction factor to prevent rupture of the reinforcement due to chemical and biological degradation. In no case shall $RF_{D}$ be less than 1.1.

Values for $RF_{ID}$, $RF_{CR}$, and $RF_D$ shall be determined from product specific test results. Guidelines for determining $RF_{ID}$, $RF_{CR}$, and $RF_D$ from product specific data are provided in FHWA Publication No. FHWA-NHI-10-024 and FHWA –NHI-10-025 "Design and Construction of Mechanically Stabilized Earth Walls and Reinforced Soil Slopes".

Nominal Long-term Connection Strength $T_{ac}$

The nominal long term connection strength, $T_{ac,}$ shall be based on laboratory geogrid connection tests between wall facing and geogrids. $T_{ac}$ shall be as given below

$$T_{ac} = \frac{T_{ult} * CR_{cr}}{RF_D}$$

where:

$T_{ac}$ = nominal long-term reinforcement facing connection strength per unit reinforcement width at a specified confining pressure

$T_{ult}$ = ultimate tensile strength of the reinforcement for geogrids defined as the minimum average roll value (MARV) for the product

$CR_{cr}$ = long term connection strength reduction factor to account for reduced ultimate strength resulting from connection.

$RF_D$ = strength reduction factor to prevent rupture of the reinforcement due to chemical and biological degradation.

$T_{ac}$ shall be developed from the tests conducted by an independent laboratory on the same facing blocks and geogrids as proposed for the wall and shall cover a range of overburden pressures comparable to those anticipated in the proposed wall. The connection strength reduction factor $CR_{cr}$ shall be determined in accordance to long-term connection test as described in Appendix B of FHWA Publication No. FHWA-NHI 10-025 "Design and Construction of Mechanically Stabilized Earth Walls and Reinforced Soil Slopes". $CR_{cr}$ may also be obtained from the short term connection test meeting the requirements of NCMA test method SRWU-1 in Simac et al 1993 or ASTM D4884.

The contractor shall provide a manufacturer's certificate that the Tult (MARV) of the supplied geogrid has been determined in accordance to ASTM D4595 or ASTM D6637 as appropriate. Contractor shall also provide block to block and block to reinforcement connection test reports prepared and certified by an independent laboratory. Also provide calculations in accordance to AASHTO LRFD, and using the results of laboratory tests, that the block-geogrid connections shall be capable of resisting 100% of the maximum tension load in the soil reinforcements at any level within the wall, for the design life of the wall system.

### B.3.4 Galvanized Metal Reinforcement

In lieu of polymeric geogrid earth reinforcement, galvanized metal reinforcement may be used. Design and materials shall be in accordance to Section 11.10.6.4.2 of the current *AASHTO LRFD* Specifications. The design life of steel soil reinforcements shall also comply with AASHTO LRFD.

### B.3.5 Pins

If pins are used to align modular block facing units, they shall consist of a non-degrading polymer, or hot dipping galvanized steel and be made for the express use with the modular block units supplied, to develop mechanical interlock between facing unit block layers. Connecting pins shall be capable of holding the geogrid in the proper position during backfilling. Furnish documentation that establishes and substantiates the design life of such devices.

### B.3.6 Backfill Materials

Wall Backfill, Type A, shall comply with the requirements for Coarse Aggregate No. 1 as given in standard spec 501.2.5.4.4. All backfill placed within a zone from the base of the leveling pad to the top of the final layer of wall facing units and within 1 foot behind the back face of the wall shall be Wall Backfill, Type A. This includes all material used to fill openings in the wall facing units.

Wall Backfill, Type B, shall comply with the requirements for Grade 1 Granular Backfill as contained in standard spec 209.2.2. All backfill placed in a zone extending horizontally from 1 foot behind the back face of the wall to 1 foot beyond the end of the reinforcement and extending vertically from the base of the leveling pad to the top of the final layer of all facing units shall be Wall Backfill, Type B.

Backfill within the reinforced zone shall meet the following requirements:

| Test | Method | Value |
|---|---|---|
| pH | AASHTO T-289 | 4.5 – 9.0 |
| Sulfate content[1] | AASHTO T-290 | 200 ppm max. |
| Chloride content[1] | AASHTO T-291 | 100 ppm max. |
| Electrical Resistivity[1] | AASHTO T-288 | 3000 ohm/cm min. |
| Angle of Internal Friction | AASHTO T-236 | 30 degrees min. |
| Organic Content[1] | AASHTO T-267 | 1.0% max. |

[1] Requirement does not apply to walls with non-metallic reinforcement.

Prior to placement of the backfill, obtain and furnish to the engineer certified report of test results that the backfill material complies with the requirements of this specification. When backfill characteristics and/or sources change, a certified report of tests must be provided for the new backfill material.

All other backfill materials required to finish the wall and restore the ground surface may be select material available on the project that meets the engineer's approval.

## C Construction

### C.1 General

Place the wall facing units in accordance to the manufacturer's instructions and to the lines, elevations, batter, and tolerances as shown on the plans. Center the initial layer of facing units on the leveling pad; then level them and properly align them. Fill formed voids or openings in the facing units with wall backfill, Type A. Remove all debris on the top of each layer of facing units, before placing the next layer of facing units.

Install all pins, rods, clips, or other devices used to develop mechanical interlock between facing unit layers in accordance to the manufacturer's directions.

All excavation for the Wall Modular Block Mechanically Stabilized Earth shall conform to standard spec 206. At the end of each working day, provide good temporary drainage such that the backfill shall not become contaminated with run-off soil or water if it should rain. Do not stockpile or store materials or large equipment within 10 feet of the back face of the wall.

### C.2 Backfill

Place backfill materials in the areas as indicated on the plans and as detailed in this specification. Backfill lifts shall be no more than 8-inches in depth. Backfilling shall closely follow erection of each course of wall facing units. Compact wall backfill Type A with at least three passes of lightweight manually operated compaction equipment acceptable to the engineer.

Compact wall backfill Type B as specified in standard spec 207.3.6. Compact Wall Backfill Type B to 95.0% of maximum density as determined by AASHTO T-99, Method C. Perform compaction testing on the backfill. When performing nuclear testing, use a nuclear gauge from the department's approved list, ensure that the operator is a HTCP certified Nuclear Density Technician I, and conform to CMM 8.15 for testing and gauge monitoring methods. Conduct testing at a minimum frequency of 1 test per 2 feet of vertical wall height, per 200 feet length of wall, or major portion thereof. A minimum of one test for every 2-foot layer of vertical wall height is required. Test sites shall be selected using ASTM Method D3665. Deliver documentation of all compaction testing results to the engineer at the time of testing.

Conduct backfilling operations in such a manner as to prevent damage or misalignment of the wall facing units, soil reinforcement, or other wall components. At no expense to the department, correct any such damage or misalignment as directed by the engineer. A field representative of the wall supplier shall be available during wall construction to provide technical assistance to the contractor and the engineer.

Place and compact the MSE backfill to the level of the next higher layer of MSE reinforcement before placing the MSE reinforcement or connecting it to the wall facing. The MSE reinforcement shall lay horizontally on top of the most recently placed and compacted layer of MSE backfill.

Do not operate tracked or wheeled equipment on the backfill within 3 feet from the back face of modular blocks. The engineer may order the removal of any large or heavy equipment that may cause damage or misalignment of the wall facing units.

**C.3 Soil Reinforcement**

Place soil reinforcement at the positions and to the lengths as indicated on the accepted shop drawings. Take care that backfill placement over the positioned soil reinforcement elements does not cause damage or misalignment of these elements. Correct any such damage or misalignment as directed by the engineer. Do not operate wheeled or tracked equipment directly on the soil reinforcement. A minimum cover of 6 inches is required before such operation is allowed.

**C.4 Geogrid Layers**

Place and anchor geogrid material between wall unit layers in the same manner as used to determine the Geogrid Block-to-Connection Strength. Place the grid material so that the machine direction of the grid is perpendicular to the wall face. Each grid layer shall be continuous throughout the lengths indicated on the plans. Join grid strips with straps, rings, hooks or other mechanical devices to prevent movement during backfilling operations. Prior to placing backfill on the grid, pull the grid taunt and hold in position with pins, stakes or other methods approved by the engineer.

**C.5 Steel Layers**

Place the steel reinforcement full width in one piece as shown on the plans. No splicing will be allowed. Maintain elements in position during backfilling.

**C.6 Geotechnical Information**

Geotechnical data to be used in the design of the wall is given on the wall plan. After completion of wall excavation, notify the department and allow two days for the Regional Soil Engineer to review the foundation.

**D Measurement**

The department will not measure Wall Modular Block Mechanically Stabilized Earth LRFD. The department will use pay plan quantity according to the Pay Plan Quantity article. No other measurement of quantities shall be made in the field unless the engineer directs in writing a change to the limits indicated on the contract plans.

**E Payment**

The department will pay for plan quantities according to the Pay Plan Quantity article at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4740 | Wall Modular Block Mechanically Stabilized Earth LRFD | SF |

Payment is full compensation for supplying a design and shop drawings; preparing the site, including all necessary excavation and disposal of surplus materials; supplying all necessary wall components to produce a functional system including cap, copings and leveling pad; constructing the retaining system and wall drainage systems if applicable; providing backfill, backfilling and compacting, and performing compaction testing; and for furnishing all tools, labor, equipment, and incidentals necessary to complete the contract work. Parapets, railings, and other items above the wall cap or coping will be paid for separately.

Any required topsoil, fertilizer, seeding or sodding and mulch will be paid for at the contract unit price of topsoil, fertilizer, seeding or sodding and mulch, respectively.
LRFD 532-031S (071612)

## 384. Wall Concrete Panel With Traffic Barrier Mechanically Stabilized Earth LRFD/QMP, Item SPV.0165.4750.

**A Description**

This special provision describes designing, furnishing materials and erecting a permanent earth retention system in accordance to the lines, dimension, elevations and details as shown on the plans and provided in the contract. The design life of the mechanically stabilized earth (MSE) wall with integrated traffic barrier and all wall components shall be 75 years minimum.

This special provision describes the quality management program (QMP) for MSE walls. A quality management program is defined as all activities, including process control, inspection, sampling and testing, and necessary adjustments in the process that are related to the construction of the MSE wall, which meets all the requirements of this provision.

This special provision describes contractor quality control (QC) sampling and testing for backfill density testing, compaction, documenting those results, and documenting related production and placement process changes. This special provision also describes department quality verification (QV), independent assurance (IA), and dispute resolution.

Chapter 8 of the department's construction and materials manual (CMM) provides additional detailed guidance for QMP work and describes sampling and testing procedures. The contractor may obtain the CMM from the department's web site at:
http://wisconsindot.gov/Pages/doing-bus/eng-consultants/cnslt-rsrces/rdwy/cmm.aspx

## B Materials

### B.1 Proprietary Mechanically Stabilized Earth Concrete Panel Wall Systems

The supplied precast panel wall system with integrated traffic barrier must be provided by one of the same manufacturers of the department's approved list of Concrete Panel Mechanically Stabilized Earth Wall systems (Concrete Panel MSE Walls).

Proprietary wall systems may be used for this work, but must conform to the requirements of this specification and designed and manufactured by the same manufacturer of proprietary mechanically stabilized earth concrete panel wall systems pre-approved for use by the department's Bureau of Structures, Structures Design Section. The department maintains a list of pre-approved Concrete Panel Mechanically Stabilized Earth Wall systems. To be eligible for use on this project, a MSE concrete panel wall system with an integrated traffic barrier must be manufactured by the one of same manufacturers of pre-approved Concrete Panel Mechanically Stabilized Earth Wall systems and on the pre-approved list prior to the bid opening date. The name of the pre-approved proprietary wall system selected shall be furnished to the engineer within 25 days after the award of contract. The location of the plant manufacturing the concrete panels with integrated traffic barrier shall be furnished to the engineer at least 14 days prior to the start of panel production.

To receive pre-approval, the retaining wall system must comply with all pertinent requirements of this provision. Applications for pre-approval may be submitted at any time. Applications must be prepared in accordance to the requirements of Chapter 14 of the department's LRFD Bridge Manual. Information and assistance with the pre-approval process can be obtained by contacting the Structures Design Section in Room 601 of the Hill Farms State Transportation Building in Madison or by calling (608) 266-8494.

### B.2 Design Requirements

It is the responsibility of the contractor to supply a design and supporting documentation as required by this special provision, for review by the department, to show the proposed wall design is in compliance with the design specifications. Four copies of the following shall be submitted to the engineer for review and acceptance no later than 60 days from the date of notification to proceed with the project.

The plans and shop drawings shall be prepared on reproducible sheets 11 inch x 17 inch, including borders. Each sheet shall have a title block in the lower right corner. The title block shall include the project identification number and structure number. Design calculations and notes shall be on 8 ½ inch x 11 inch sheets, and shall contain the project identification number, name or designation of the wall, date of preparation, initials of designer and checker, and page number at the top of the page. All plans, shop drawings, and calculations shall be signed, sealed and dated by a professional engineer licensed in the State of Wisconsin.

The design of the Concrete Panel MSE wall shall be in compliance with the *AASHTO LRFD Bridge Design Specifications 5th Edition 2010*, (AASHTO LRFD) with latest interim specifications for Mechanically Stabilized Earth Walls, WisDOT's current *Standard Specifications for Highway and Structure Construction* (Standard Specifications), Chapter 14 of the WisDOT LRFD Bridge Manual and standard engineering design procedures as determined by the department. Loads, load combinations, load and resistance factors shall be as specified in AASHTO LRFD Section 11. The associated resistance factors shall be defined in accordance to Table11.5.6-1 LRFD.

Design and construct the walls in accordance to the lines, grades, heights and dimensions shown on the plans, as herein specified, and as directed by the engineer. Where walls or wall sections intersect with an included angle of 130 degrees or less, a vertical corner element separate from the standard panel face shall abut and interact with the opposing standard panels. The corner element shall have ground reinforcement connected specifically to that panel and shall be designed to preclude lateral spread of the intersecting panels. If the wall is installed in front of a bridge abutment or wing, it shall also be designed to resist the applied abutment/bridge lateral forces specified on the contract plans.

Walls parallel to supporting highway traffic shall be designed for the effects of highway surcharge loading equivalent of 2 feet soil surcharge weight or 240 psf. The design shall also consider the traffic barrier impact as specified hereinafter. Walls that do not carry highway traffic shall be designed for a live load surcharge of 100 psf in accordance to Chapter 14 of the WisDOT LRFD Bridge Manual or as stated on the plans.

Provide an integrated barrier on top of the wall with barrier height and shape of the traffic face as detailed on the plans. Design the traffic barrier to resist design impact forces given in AASHTO LRFD Table A13.2-1, to the Railing Test Level indicated on the plans. Distribute the barrier impact loads through the barrier to the upper rows of soil reinforcement according to AASHTO LRFD. Provide supporting design calculations of the entire wall system and individual wall components to meet the required traffic barrier impact resistance.

A maximum value of the angle of internal friction of the wall backfill material used for design shall be assumed to be 30 degrees without a certified report of tests. If a certified report of tests yields an angle of internal friction greater than 30 degrees, the larger test value may be used for design, up to a maximum value of 36 degrees.

An external stability check at critical wall stations showing Capacity Demand Ratios (CDR) for sliding, eccentricity, and bearing checks is performed by the department and are provided on the wall plans. If the contractor utilizes an angle of internal friction greater than 30 degrees for the design, external stability checks at critical wall stations showing Capacity Demand Ratios (CDR) for sliding, eccentricity, and bearing checks are required to be analyzed by the contractor.

The design of the Concrete Panel With Traffic Barrier Mechanically Stabilized Earth Wall by the contractor shall consider the internal and compound stability of the wall mass in accordance to AASHTO LRFD 11.10.6. The internal stability shall include soil reinforcement pullout, soil reinforcement rupture, and panel-reinforcement connection failure at each soil reinforcement level. The design shall be performed using the Simplified Method or Coherent Gravity Method. Calculations for factored stresses and resistances shall be based upon assumed conditions at the end of the design life. Compound stability shall be computed for the applicable strength limits.

Facing panels shall meet the design requirements of AASHTO LRFD 11.10.2.3. The Facing panels shall also be designed to resist compaction stresses that occur during the wall erection. The minimum thickness of the Facing panel shall be 5.5 inches. The surface area of a standard single panel cannot exceed 100 square feet. The maximum height of a standard panel shall be 10 feet not including the height of the traffic barrier on top of the panel. The design of the steel reinforcement within the panels shall be based on one-way bending action. Design the wall panels and joints between panels to accommodate a maximum differential settlement of 1 foot over a 100-foot length, unless the plans indicate other.

The minimum length of soil reinforcement measured from the back face of the wall shall be equal to 0.7 times the wall height or as shown on the plan. In no case shall this length be less than 8 feet. The soil reinforcement length shall be the same from the bottom to the top of the wall. The soil reinforcement shall extend a minimum of 3.0 feet beyond the theoretical failure plane in all cases. The maximum vertical spacing of soil reinforcement layers shall be 31 inches. The uppermost layer of the reinforcement shall be located between 6 inches and 18 inches below the bottom of an overlying slab, footing or top of the wall. The upper layers of the soil reinforcement shall also be checked to verify that they have sufficient tensile resistance against traffic barrier impact where applicable.

All soil reinforcement steel required for the reinforced soil zone shall be connected to the face panels. The reinforcement and the reinforcement/facing connection strength shall be designed to resist maximum factored reinforcement loads in accordance to AASHTO LRFD Section 11.10.6. Facing connection strength shall be defined as the resistance factor times the failure load, or the load at 0.5 inch deformation times 0.9, whichever is less. The nominal long term design strength in steel reinforcement and connections shall be based upon assumed conditions at the end of the design life.

Soil reinforcement shall be prefabricated into single or multiple elements before galvanizing. Soil reinforcement shall be fabricated or designed to avoid piling, drainage structures or other obstacles in the fill without field modifications. Cutting or altering of the basic structural section of either the strip or grid at the site is prohibited unless approved by the Structures Design Section. A minimum clearance of 3” shall be maintained between any obstruction and reinforcement unless otherwise approved by the Structures Design Section. Splicing steel reinforcement is not allowed, unless approved by the Structures Design Section.

MSE facing panels shall be installed on concrete leveling pads. The minimum cross section of the leveling pad shall be 6-inches deep by 1-foot wide. Potential depth of frost penetration at the wall location shall not be considered in designing the wall for depth of leveling pad.

Submit the following to the engineer for review: complete design calculations, explanatory notes, supporting materials, specifications, and detailed plans and shop drawings for the proposed wall system. Sample analyses and hand output shall be submitted to verify the output by the software. The design calculations and notes shall clearly indicate the Capacity to Demand Ratios (CDR) for all internal stabilities as defined in AASHTO LRFD.

The wall submittal package shall be submitted electronically to the engineer and Structures Design Section. Submit all required information no later than 30 days prior to beginning construction of the wall. The detailed plans and shop drawings shall include all details, dimensions, quantities and cross-sections necessary to construct the walls.

**B.3 Wall System Components**

Materials furnished for wall system components under this contract shall conform to the requirements of this specification. All certifications related to material and components of the wall systems specified in this subsection shall be submitted to the engineer.

**B.3.1 General**

The walls shall have modular precast concrete face panels produced by a wet cast process, and have cast-in-place concrete pads or footings. The concrete panels shall have a minimum strength of 4000 psi at 28 days. The concrete for the panels shall be air entrained, with an air content of 6% +/- 1.5%. All materials for the concrete mixture for the panels shall meet the requirements of standard spec 501. The panel edges shall be configured so as to conceal the joints. The detail shall be a shiplap, tongue and groove or other detail adequate to prevent vandalism or ultraviolet light damage to the backside of the wall joint covering. Joints between panels shall be no more than 0.75 inch. Use full wall height slip joints at points of differential settlement when detailed on the plan. Horizontal joints must be provided with a compressible bearing material to prevent concrete to concrete contact.

A minimum of two bearing pads shall be used per panel. The allowable bearing stress shall not exceed 900 psi. The bearing pads shall be preformed EPDM rubber conforming to ASTM D-2000, Grade 2, Type A, Class A with a minimum Durometer Hardness of 80, or high- density polyethylene pads with a minimum density of 0.034 $lb/in^3$ in accordance to ASTM 1505.

An 18-inch wide geotextile shall be used on the backface of the wall panels to cover all panel joints. The geotextile shall meet the physical requirements stated in standard spec 645.2.4 for Geotextile Fabric, Type DF, Schedule B, except that the grab tensile strength shall be a minimum of 180 pounds in both the machine and cross-machine directions. The geotextile shall be attached with a standard construction adhesive suitable for use on

concrete surfaces and cold temperatures. The adhesive shall be applied to the panels, not to the geotextile.

When Alternate Wall Backfill Type B (Coarse Aggregate No.1) is used in the reinforced zone as backfill, as required for construction during freezing weather, a geotextile shall be placed to separate the Alternate Wall Backfill Type B from the retained soil. If the wall is constructed in stages where portions of wall backfill consist of Wall Backfill Type A and adjacent portions consist of Alternate Wall Backfill Type B (Coarse Aggregate No.1), a geotextile must also be placed at the interface of and between the two different backfill materials for the entire height of the backfill to prevent migration of finer soil. The geotextile shall also be placed on top of the Alternate Wall Backfill Type B to provide separation from the fill above the wall reinforced zone. Adjoining sections of geotextile should be overlapped by a minimum of 12 inches. The geotextile shall meet the physical requirements stated in standard spec 645.2.4 for Geotextile Fabric, Type DF, Schedule B. Where geotextile is used it cannot be placed directly on top of wall reinforcement and it must be placed at one-half of the backfill lift thickness over the reinforcement.

Do not alternate wall backfill types along the height of the wall. Sloping of the Alternate Wall Backfill Type B from the top of the reinforced earth zone down to the leveling pad is acceptable as required for staging and as approved by the engineer. The section C.2 compaction requirements must be satisfied for this interim condition. Temporary shoring return walls, such as wire face MSE walls, are acceptable as approved by the engineer.

All steel portions of the wall system exposed to earth shall be galvanized. All soil reinforcement and attachment devices shall be carefully inspected to ensure they are true size and free from defects that may impair the strength and durability.

For cast in place sections of cap and coping, use poured concrete masonry Grade A, A-FA, A-S, A-T, A-IS or A-IP concrete conforming to standard spec 501 as modified in standard spec 716. Provide QMP for cast in place cap and coping concrete as specified in standard spec 716, Class II Concrete.

Use a wall leveling pad that consists of poured concrete masonry, Grade A, A-FA, A-S, A-T, A-IS or A-IP concrete conforming to standard spec 501 as modified in standard spec 716. Provide QMP for leveling pad concrete as specified in standard spec 716, Class III Concrete.

The minimum embedment to the top of the leveling pad shall be 1 foot 6 inches or as given on the plan or given in AASHTO LRFD 11.10.2.2 whichever is greater. Step or slope the leveling pad to follow the required profile grade of the toe of the integrated traffic barrier. If stepped, the leveling pad's steps shall keep the bottom of the wall within one half the panel heights of the minimum embedment i.e. the minimum embedment plus up to one half the height of one panel. Additional embedment may be detailed by the contractor, but will not be measured for payment.

**B.3.2 Backfill**

Furnish and place backfill for mechanically stabilized earth concrete panel walls as shown on the plans and as hereinafter provided. The same backfill material must be used for the entire wall height, from the leveling pad to top of finished reinforced earth zone, for each stage of wall construction. For the purposes of this special provision, a stage is defined as constructing a full-height portion of wall along the wall alignment, not staging wall construction up the height of the wall. Horizontal changes in backfill strata up the height of the wall will not be allowed.

In addition to gradation requirements hereinafter provided, backfill material within the reinforced zone shall meet the following requirements.

| Test | Method | Value |
|---|---|---|
| pH | AASHTO T-289 | 5 – 10.0 |
| Sulfate content | AASHTO T-290 | 200 ppm max. |
| Chloride content | AASHTO T-291 | 100 ppm max. |
| Electrical Resistivity | AASHTO T-288 | 3000 ohm/cm min. |
| Organic Content | AASHTO T-267 | 1.0% max. |
| Angle of Internal Friction | AASHTO T-236* | 30 degrees min. (At 95.0% of maximum density and optimum moisture, per AASHTO T99, or as modified by C.2.) |

*If the amount of P-4 material is greater than 60%, use AASHTO 236 with a standard-size shear box. Test results of this method may allow the use of larger angles of internal friction, up to the maximum allowed by this specification.

If the amount of P-4 material is less than or equal to 60%, two options are available to determine the angle of internal friction. The first method is to perform a fractured faces count, per ASTM 5821, on the R-4 material. If more than 90% of the material is fractured on one face and more than 50% is fractured on two faces, the material meets the specifications and the angle of internal friction can be assumed to be 30 degrees. The second method allows testing all P-1” material, as per AASHTO T-236, with a large shear box. Test results of this second method may allow the use of larger angles of internal friction, up to the maximum allowed by this specification.

Prior to placement of the backfill, obtain and furnish to the engineer a certified report of test results that the backfill material complies with the requirements of this specification.

Specify the method used to determine the angle of internal friction. This certified report of test shall be less than 6 months old. Tests will be performed by a certified independent laboratory. In addition, when backfill characteristics and/or sources change, provide a certified report of tests for the new backfill material. Additional certified reports of tests (except Angle of Internal Friction test), are also required. These additional backfill tests may be completed at the time of material production or material placement, with concurrence of the engineer. If this additional testing is completed at the time of material production, complete testing for every 2000 cubic yards of backfill or portion thereof. If this additional testing is completed at the time of material placement, complete testing for every 2000 cubic yards of backfill, or portion thereof, used per wall. All certified report of test results shall be less than 6 months old and performed by a certified independent laboratory.

**B.3.2.1 Wall Backfill Type A**

For typical wall backfill, provide and use backfill that consists of natural sand or a mixture of sand with gravel, crushed gravel or crushed stone. It shall not contain recycled or milled asphalt, recycled concrete, foundry sand, bottom ash, blast furnace slag or other potentially corrosive material.

Provide material conforming to the following gradation requirements as per AASHTO T27.

| Sieve Size | Percentage by Weight Passing |
|---|---|
| 1 inch | 100 |
| No. 40 | 0 - 60 |
| No. 200 | 0 - 15 |

The material shall have a liquid limit not greater than 25, as per AASHTO T89, and a plasticity index not greater than 6, as per AASHTO T90. Provide the percent by weight, passing the #4 sieve.

**B.3.2.2 Wall Backfill Type B**

If the project schedule is such that the wall must be constructed during freezing weather, the engineer may allow use of alternate wall backfill materials. The alternate wall backfill materials will only be utilized when approved by the engineer. Alternate Wall Backfill, Type B shall comply with the requirements for Coarse Aggregate No.1 as given in standard spec 501.2.5.4.4. The alternate wall backfill must consist of crushed stone or crushed gravel.

For Alternate Wall Backfill, Type B, provide material conforming to the following gradation requirements as per WisDOT Standard Specifications for Highway and Structure Construction.

| Sieve Size | Percentage by Weight Passing |
|---|---|
| | Size No. 1 Coarse Aggregate, Standard spec 501.2.5.4.4 |
| 1” | 100 |
| ¾” | 90-100 |
| 3/8” | 20-55 |
| #4 | 0-10 |
| #8 | 0-5 |

## C Construction

### C.1 Excavation and Backfill

Excavation will encompass preparing the leveling pad foundation and the area below the reinforcing strips in accordance to standard spec 206. The volume of excavation covered is limited to the width of the reinforced mass and to the depth of the leveling pad unless shown or noted otherwise on the plan. At the end of each working day, provide good temporary drainage such that the backfill shall not become contaminated with run-off soil or water if it should rain. Do not stockpile or store materials or large equipment within 10 feet of the back of the wall.

**C.2 Compaction** Compact all backfill behind the wall as specified in standard spec 207.3.6. Compact the backfill to 95.0% of maximum dry density as determined by AASHTO T-99 (modified to compute densities to the nearest 0.1 pcf), or as modified as follows. If the gradation of the granular backfill is such that the P-200 material is less than 7% and the P-40 is less than 30%, a one-point Proctor test can be conducted in place of the 5-point Proctor. To complete this one-point test, compact the sample at a moisture content of 6%, then compute the actual (as-tested) sample moisture after completion of the test. Use Method B or D, and perform this test without removing oversize particles and without correction for coarse particles, as per AASHTO T224. The one-point as-tested moisture content represents the optimum moisture, and the measured one-point density represents the maximum wet density of the material. From these values, the maximum dry density can be computed.

If the engineer allows and approves use of alternate wall backfill material, the compaction of Alternate Wall Backfill Type B (Coarse Aggregate No.1) should be performed with at least three passes of a vibratory compactor in two mutually perpendicular directions (at least 6 passes total), such that with additional compactive effort, no further densification is obtained as visually determined by the engineer. If additional densification is observed after three passes in the two directions, then the material must be re-compacted until no further visual densification is observed. The initial three passes of the compactor must be in the direction parallel to the wall alignment followed by the three passes in the direction perpendicular to the wall alignment. Density testing is not required for Alternate Wall Backfill Type B.

Ensure adequate moisture is present in the backfill during placement and compaction to prevent segregation and to help achieve compaction.

Compaction of backfill within 3 feet of the back face of the wall should be accomplished using lightweight compaction devices. Use of heavy compaction equipment or vehicles should be avoided within 3 feet of the panels.

Place and compact the MSE backfill to the level of the next higher layer of MSE reinforcement before placing the MSE reinforcement or connecting it to the wall facing. The MSE reinforcement shall lay horizontally on the top of the most recently placed and compacted layer of MSE backfill. Bending of MSE reinforcement that result in a kink in the reinforcement shall not be allowed. If skewing of the reinforcement is required due to obstructions in the reinforced fill, the maximum skew angle shall not exceed 15 degrees from the normal position unless a greater angle is shown on the plans. The adequacy of the skewed reinforcement in such a case shall be addressed by supporting calculations.

### C.3 Panel Tolerances

As backfill material is placed behind a panel, maintain the panel in its proper inclined position according to the supplier specifications and as approved by the engineer. The supplier shall specify the back batter so that the final position of the wall is vertical. Vertical tolerances and horizontal alignment tolerances shall not exceed ¾-inch when measured along a 10-foot straight edge. The maximum allowable offset in any panel joint shall be ¾-inch. The overall vertical tolerance of the wall (plumbness from top to bottom) shall not exceed ½-inch per 10 feet of wall height. Erect the precast face panels to ensure that they are located within 1 inch from the contract plan offset at any location to ensure proper wall location at the top of the wall. Provide a ¾-inch joint separation between all adjacent face panels to prevent direct concrete-to-concrete contact. Maintain this gap by the use of bearing pads and/or alignment pins. Failure to meet this tolerance shall cause the engineer to require the contractor to disassemble and re-erect the affected portions of the wall. In addition, imperfect molding, honeycombing, cracking or severe chipping of panels shall be cause of panel rejection.

### C.4 Quality Management Program

#### C.4.1 Quality Control Plan

Submit a comprehensive written quality control plan to the engineer at or before the pre-construction meeting. Do not perform MSE wall construction work before the engineer reviews and accepts the plan. Construct the project as the plan provides.

Do not change the quality control plan without the engineer’s review and acceptance. Update the plan with changes as they become effective. Provide a current copy of the plan to the engineer and post in the contractor’s laboratory as changes are adopted. Ensure that the plan provides the following elements:

- An organizational chart with names, telephone numbers, current certifications and/or titles, and roles and responsibilities of QC personnel.
- The process used to disseminate QC information and corrective action efforts to the appropriate persons. Include a list of recipients, the communication process that will be used, and action time frames.
- A list of source locations, section and quarter descriptions, for all aggregate materials requiring QC testing.
- Descriptions of stockpiling and hauling methods.
- An outline for resolving a process control problem. Include responsible personnel, required documentation, and appropriate communication steps.
- Location of the QC laboratory, retained sample storage, and other documentation.
- A summary of the locations and calculated quantities to be tested under this provision.

**C.4.2 Quality Control Personnel**

Perform the quality control sampling, testing, and documentation required under this provision using HTCP certified technicians. Have a HTCP Level I Grading Technician, Level I Aggregate Technician, or Assistant Certified Aggregate Technician (ACT) present at the each grading site during all wall backfill placement, compaction, and nuclear testing activities. Have a HTCP Level I Nuclear Density Technician or Assistant Certified Nuclear Density Technician (ACT) perform field density and field moisture content testing. The HTCP Level I Grading Technician, Level I Aggregate Technician, or Assistant Certified Aggregate Technician (ACT) must also be present to document and confirm the required number of passes of the compaction equipment for the Alternate Wall Backfill Type B during wall backfill placement and compaction activities.

If an Assistant Certified Technician (ACT) is performing sampling or testing, a certified technician must coordinate and take responsibility for the work an ACT performs. Have a certified technician ensure that all sampling and testing is performed correctly, analyze test results, and post resulting data. No more than one ACT can work under a single certified technician.

**C.4.3 Equipment**

Furnish the necessary equipment and supplies for performing quality control testing. Ensure that all testing equipment conforms to the equipment specifications applicable to the required testing methods. The engineer may inspect the measuring and testing devices to confirm both calibration and condition. Calibrate all testing equipment according to the CMM and maintain a calibration record at the laboratory.

Furnish nuclear gauges from the department's approved product list at http://www.atwoodsystems.com/materials. Ensure that the gauge manufacturer or an approved calibration service calibrates the gauge the same calendar year it is used on the project. Retain a copy of the calibration certificate with the gauge.

Conform to ASTM D 6938 and CMM 8.15 for density testing and gauge monitoring methods. Perform nuclear gauge measurements using gamma radiation in the backscatter or direct transmission position. Perform each test for 4 minutes of nuclear gauge count time.

Split each Proctor sample and identify so as to provide comparison with the department's test results. Unless the engineer directs otherwise, retain the QC split samples for 14 calendar days and promptly deliver the department's split samples to the department

**C.4.4 Quality Control (QC) Testing**

Perform compaction testing on the backfill. Conform to CMM 8.15 for testing and gauge monitoring methods. Conduct density testing at a minimum frequency of 1 test per 150 cubic yards of backfill, or major portion thereof. A minimum of one test for every lift is required. Deliver documentation of all compaction testing results to the engineer at the time of testing. Density testing is not required for Alternate Wall Backfill Type B.

Perform 1 gradation test every 750 cubic yards of fill and one 5-point Proctor test (or as modified in C.2) every 2000 cubic yards of fill. Provide the region split samples of both within 72 hours of sampling, at the region laboratory. Test sites shall be selected using ASTM Method D3665. Provide Proctor test results to the engineer within 48 hours of sampling. Provide gradation test results to the engineer within 24 hours of sampling.

Observe the compaction and densification process for the Alternate Wall Backfill Type B. The material must be compacted using the minimum number of passes of the compaction equipment until no further densification is obtained as visually determined. Provide documentation that the compaction met the required number of passes of the compaction equipment for the Alternate Wall Backfill Type B.

**C.4.5 Department Testing**

**C.4.5.1 General**

(1) The department will conduct verification testing to validate the quality of the product and independent assurance testing to evaluate the sampling and testing. The department will provide the contractor with a listing of names and telephone numbers of all QV and IA personnel for the project, and provide test results to the contractor within 2 business days after the department obtains the sample.

**C.4.5.2 Quality Verification (QV) Testing**

(1) The department will have an HTCP technician, or ACT working under a certified technician, perform QV sampling and testing. Department verification testing personnel must meet the same certification level requirements specified in C.4.2 for contractor testing personnel for each test result being verified. The department will notify the contractor before sampling so the contractor can observe QV sampling.

(2) The department will conduct QV tests at the minimum frequency of 30% of the required contractor density, Proctor and gradation tests.

(3) The department will locate density tests and gradation samples randomly, at locations independent of the contractor's QC work. The department will split each Proctor and gradation QV sample, testing half for QV, and retaining the remaining half for 10 business days.

(4) The department will conduct QV Proctor and gradation tests in a separate laboratory and with separate equipment from the contractor's QC tests. The department will use the same methods specified for QC testing.

(5) The department will assess QV results by comparing to the appropriate specification limits. If QV test results conform to this special provision, the department will take no further action. If density QV test results are nonconforming, the area shall be reworked until the density requirements of this special provision are met. If the gradation test results are nonconforming, standard spec 106.5 will apply. Differing QC and QV nuclear density values of more than 1.5 pcf will be investigated and resolved. QV density tests will be based on the appropriate QC Proctor test results, unless the QV and QC Proctor result difference is greater than 3.0 pcf. Differing QC and QV Proctor values of more than 3.0 pcf will be investigated and resolved.

(6) The department will also provide personnel to be onsite and confirm the required number of passes of the compaction equipment for the Alternate Wall Backfill Type B during wall backfill placement and compaction activities on a random basis. This work does not relieve the contractor of the responsibility to observe and document fill placement and compaction as required in C.4.2 and C.4.4.

**C.4.5.3 Independent Assurance (IA)**

(1) Independence assurance is unbiased testing the department performs to evaluate the department's QV and the contractor's QC sampling and testing, including personnel qualifications, procedures, and equipment. The department will perform an IA review according to the department's independent assurance program. That review may include one or more of the following:

1. Split sample testing.
2. Proficiency sample testing.
3. Witnessing sampling and testing.
4. Test equipment calibration checks.
5. Reviewing required worksheets and control charts.
6. Requesting that testing personnel perform additional sampling and testing.

(2) If the department identifies a deficiency, and after further investigation confirms it, correct that deficiency. If the contractor does not correct or fails to cooperate in resolving identified deficiencies, the engineer may suspend placement until action is taken. Resolve disputes as specified in C.4.5.4.

**C.4.5.4 Dispute Resolution**

(1) The engineer and contractor should make every effort to avoid conflict. If a dispute between some aspect of the contractor's and the engineer's testing program does occur,

seek a solution mutually agreeable to the project personnel. The department and contractor may review the data, examine data reduction and analysis methods, evaluate sampling and testing procedures, and perform additional testing. Use ASTM E 178 to evaluate potential statistically outlying data.

(2) Production test results, and results from other process control testing, may be considered when resolving a dispute.

(3) If the project personnel cannot resolve a dispute, and the dispute affects payment or could result in incorporating non-conforming product or work, the department will use third party testing to resolve the dispute. The department's central office laboratory, or a mutually agreed on independent testing laboratory, will provide this testing. The engineer and contractor will abide by the results of the third party tests. The party in error will pay service charges incurred for testing by an independent laboratory. The department may use third party test results to evaluate the quality of questionable materials and determine the appropriate payment. The department may reject material or otherwise determine the final disposition of nonconforming material as specified in standard spec 106.5.

**C.5 Geotechnical Information**

Geotechnical data to be used in the design of the wall is given on the wall plan. After completing wall excavation of the entire reinforced soil zone, notify the department and allow the Regional Geotechnical Engineer two working days to review the foundation.

**D Measurement**

The department will not measure Wall Concrete Panel With Traffic Barrier Mechanically Stabilized Earth LRFD/QMP. The department will use pay plan quantity according to the Pay Plan Quantity article. No measurement of quantities shall be made in the field. Unless the engineer directs in writing, a change to the limits indicated on the contract plan, wall area constructed above or below these limits will not be measured for payment.

**E Payment**

The department will pay for plan quantities according to the Pay Plan Quantity article at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4750 | Wall Concrete Panel With Traffic Barrier Mechanically Stabilized Earth LRFD/QMP | SF |

Payment is full compensation for supplying a design and shop drawings; preparing the site, including all necessary excavation and disposal of materials; supplying all necessary wall components to produce a functional system including cap and copings; constructing the retaining system including integral traffic barrier on the top of the wall, providing backfill (Type A or Type B), backfilling, compacting, developing/completing/documenting the quality management program, performing compaction testing/observation. Any temporary return walls, such as a wire face MSE wall, required to facilitate construction of a portion of wall with Backfill Type B is incidental to this bid item.

Any required topsoil, fertilizer, seeding or sodding and mulch will be paid for at the contract unit price of topsoil, fertilizer, seeding or sodding and mulch, respectively.

## 385. Wall Concrete Panel with Traffic Barrier Mechanically Stabilized Earth LRFD/LFCF, Item SPV.0165.4760.

### A Description

This special provision describes designing, furnishing materials and erecting a permanent earth retention system in accordance to the lines, dimension, elevations and details as shown on the plans and provided in the contract. The design life of the mechanically stabilized earth (MSE) wall with integrated traffic barrier and all wall components shall be 75 years minimum.

This special provision describes using Lightweight Foamed Concrete Fill (LFCF) for the MSE wall backfill in lieu of the engineered granular backfill typically specified for MSE walls. Place LFCF to the limits shown in the plans. Engineered granular backfill is required as designated and shown on the plans in the wall transition zones where the MSE wall backfill transitions from LFCF to conventional engineered granular backfill.

This special provision describes the quality management program (QMP) for MSE walls. A quality management program is defined as all activities, including process control, inspection, sampling and testing, and necessary adjustments in the process that are related to the construction of the MSE wall, which meets all the requirements of this provision.

This special provision describes contractor quality control (QC) sampling and testing for LFCF cast density and compressive strength and granular backfill density testing, documenting those results, and documenting related production and placement process changes. This special provision also describes department quality verification (QV), independent assurance (IA), and dispute resolution.

Chapter 8 of the department's construction and materials manual (CMM) provides additional detailed guidance for QMP work and describes sampling and testing procedures. The contractor may obtain the CMM from the department's web site at:
http://wisconsindot.gov/Pages/doing-bus/eng-consultants/cnslt-rsrces/rdwy/cmm.aspx

### B Materials

#### B.1 Proprietary Mechanically Stabilized Earth Concrete Panel Wall Systems

The supplied precast panel wall system with integrated traffic barrier must be provided by one of the same manufacturers of the department's approved list of Concrete Panel Mechanically Stabilized Earth Wall systems (Concrete Panel MSE Walls).

Proprietary wall systems may be used for this work, but must conform to the requirements of this specification and designed and manufactured by the same manufacturer of proprietary mechanically stabilized earth concrete panel wall systems pre-approved for use by the department's Bureau of Structures, Structures Design Section. The department

maintains a list of pre-approved Concrete Panel Mechanically Stabilized Earth Wall systems. To be eligible for use on this project, a MSE concrete panel wall system with an integrated traffic barrier must be manufactured by the one of same manufacturers of pre-approved Concrete Panel Mechanically Stabilized Earth Wall systems and on the pre-approved list prior to the bid opening date. The name of the pre-approved proprietary wall system selected shall be furnished to the engineer within 25 days after the award of contract. The location of the plant manufacturing the concrete panels with integrated traffic barrier shall be furnished to the engineer at least 14 days prior to the start of panel production.

To receive pre-approval, the retaining wall system must comply with all pertinent requirements of this provision. Applications for pre-approval may be submitted at any time. Applications must be prepared in accordance to the requirements of Chapter 14 of the department's LRFD Bridge Manual. Information and assistance with the pre-approval process can be obtained by contacting the Structures Design Section in Room 601 of the Hill Farms State Transportation Building in Madison or by calling (608) 266-8494.

**B.2 Design Requirements**

It is the responsibility of the contractor to supply a design and supporting documentation as required by this special provision, for review by the department, to show the proposed wall design is in compliance with the design specifications. Four copies of the following shall be submitted to the engineer for review and acceptance no later than 60 days from the date of notification to proceed with the project.

The plans and shop drawings shall be prepared on reproducible sheets 11 inch x 17 inch, including borders. Each sheet shall have a title block in the lower right corner. The title block shall include the project identification number and structure number. Design calculations and notes shall be on 8 ½ inch x 11 inch sheets, and shall contain the project identification number, name or designation of the wall, date of preparation, initials of designer and checker, and page number at the top of the page. All plans, shop drawings, and calculations shall be signed, sealed and dated by a professional engineer licensed in the State of Wisconsin.

The design of the Concrete Panel MSE wall shall be in compliance with the *AASHTO LRFD Bridge Design Specifications 5th Edition 2010*, (AASHTO LRFD) with latest interim specifications for Mechanically Stabilized Earth Walls, WisDOT's current *Standard Specifications for Highway and Structure Construction* (Standard Specifications), Chapter 14 of the WisDOT LRFD Bridge Manual and standard engineering design procedures as determined by the department. Loads, load combinations, load and resistance factors shall be as specified in AASHTO LRFD Section 11. The associated resistance factors shall be defined in accordance to Table11.5.6-1 LRFD.

Design and construct the walls in accordance to the lines, grades, heights and dimensions shown on the plans, as herein specified, and as directed by the engineer. Where walls or wall sections intersect with an included angle of 130 degrees or less, a vertical corner

element separate from the standard panel face shall abut and interact with the opposing standard panels. The corner element shall have ground reinforcement connected specifically to that panel and shall be designed to preclude lateral spread of the intersecting panels. If the wall is installed in front of a bridge abutment or wing, it shall also be designed to resist the applied abutment/bridge lateral forces specified on the contract plans.

Walls parallel to supporting highway traffic shall be designed for the effects of highway surcharge loading equivalent of 2 feet soil surcharge weight or 240 psf. The design shall also consider the traffic barrier impact where applicable. Walls that do not carry highway traffic shall be designed for a live load surcharge of 100 psf in accordance to Chapter 14 of the WisDOT LRFD Bridge Manual or as stated on the plans.

Provide an integrated barrier on top of the wall with barrier height and shape of the traffic face as detailed on the plans. Design the traffic barrier to resist design impact forces given in AASHTO LRFD Table A13.2-1, to the Railing Test Level indicated on the plans. Distribute the barrier impact loads through the barrier to the upper rows of soil reinforcement according to AASHTO LRFD. Provide supporting design calculations of the entire wall system and individual wall components to meet the required traffic barrier impact resistance.

Use LFCF as MSE backfill within the limits shown on the plans. The design of the wall and reinforced backfill zone behind this wall is to be based on an equivalent backfill area of assumed granular backfill with a maximum angle of internal friction of 30 degrees and unit weight density equal to the unit weight density of the LFCF backfill. All design and geometric requirements specified by AASHTO and hereinafter for MSE walls with granular backfill, including minimum length of MSE reinforcement will apply to this wall backfilled with LFCF material in lieu of the granular backfill.

A maximum value of the angle of internal friction used for design for the wall granular backfill placed in the wall transition zones shall be assumed to be 30 degrees.

An external stability check at critical wall stations showing Capacity Demand Ratios (CDR) for sliding, eccentricity, and bearing checks is performed by the department and are provided on the wall plans.

The design of the Concrete Panel Mechanically Stabilized Earth wall by the contractor shall consider the internal and compound stability of the wall mass in accordance to AASHTO LRFD 11.10.6. The internal stability shall include soil reinforcement pullout, soil reinforcement rupture, and panel-reinforcement connection failure at each soil reinforcement level. The design shall be performed using the Simplified Method or Coherent Gravity Method. Calculations for factored stresses and resistances shall be based upon assumed conditions at the end of the design life. Compound stability shall be computed for the applicable strength limits.

Facing panels shall meet the design requirements of AASHTO LRFD 11.10.2.3. The Facing panels shall also be designed to resist fluid pressures due to LFCF placement and compaction stresses that occur during the wall erection. The minimum thickness of the Facing panel shall be 5.5 inches. The surface area of a standard single panel cannot exceed 100 square feet. The maximum height of a standard panel shall be 10 feet not including the height of the traffic barrier on top of the panel. The design of the steel reinforcement within the panels shall be based on one-way bending action. Design the wall panels and joints between panels to accommodate a maximum differential settlement of 1 foot over a 100-foot length, unless the plans indicate other.

The minimum length of soil reinforcement measured from the back face of the wall shall be equal to 0.7 times the wall height or as shown on the plan; whichever is greater. In no case shall this length be less than 8 feet. The soil reinforcement length shall be the same from the bottom to the top of the wall. The soil reinforcement shall extend a minimum of 3.0 feet beyond the theoretical failure plane in all cases. The maximum vertical spacing of soil reinforcement layers shall be 31 inches. The uppermost layer of the reinforcement shall be located between 6 inches and 18 inches below the bottom of an overlying slab, footing or top of the wall. The upper layers of the soil reinforcement shall also be checked to verify that they have sufficient tensile resistance against traffic barrier impact where applicable.

All soil reinforcement steel required for the reinforced soil zone shall be connected to the face panels. The reinforcement and the reinforcement/facing connection strength shall be designed to resist maximum factored reinforcement loads in accordance to AASHTO LRFD Section 11.10.6. Facing connection strength shall be defined as the resistance factor times the failure load, or the load at 0.5 inch deformation times 0.9, whichever is less. The nominal long term design strength in steel reinforcement and connections shall be based upon assumed conditions at the end of the design life.

Soil reinforcement shall be prefabricated into single or multiple elements before galvanizing. Soil reinforcement shall be fabricated or designed to avoid piling, drainage structures or other obstacles in the fill without field modifications. Cutting or altering of the basic structural section of either the strip or grid at the site is prohibited unless approved by the Structures Design Section. A minimum clearance of 3” shall be maintained between any obstruction and reinforcement unless otherwise approved by the Structures Design Section. Splicing steel reinforcement is not allowed, unless approved by the Structures Design Section.

MSE facing panels shall be installed on concrete leveling pads. The minimum cross section of the leveling pad shall be 6-inches deep by 1-foot wide. Potential depth of frost penetration at the wall location shall not be considered in designing the wall for depth of leveling pad.

Submit the following to the engineer for review: complete design calculations, explanatory notes, supporting materials, specifications, and detailed plans and shop drawings for the proposed wall system. Sample analyses and hand output shall be submitted to verify the

output by the software. The design calculations and notes shall clearly indicate the Capacity to Demand Ratios (CDR) for all internal stabilities as defined in AASHTO LRFD.

The wall submittal package shall be submitted electronically to the engineer and Structures Design Section. Submit all required information no later than 30 days prior to beginning construction of the wall. The detailed plans and shop drawings shall include all details, dimensions, quantities and cross-sections necessary to construct the walls.

**B.3 Wall System Components**

Materials furnished for wall system components under this contract shall conform to the requirements of this specification. All certifications related to material and components of the wall systems specified in this subsection shall be submitted to the engineer.

**B.3.1 General**

The walls shall have modular precast concrete face panels produced by a wet cast process, and have cast-in-place concrete pads or footings. The concrete panels shall have a minimum strength of 4000 psi at 28 days. The concrete for the panels shall be air entrained, with an air content of 6% +/- 1.5%. All materials for the concrete mixture for the panels shall meet the requirements of standard spec 501. The panel edges shall be configured so as to conceal the joints. The detail shall be a shiplap, tongue and groove or other detail adequate to prevent vandalism or ultraviolet light damage to the backside of the wall joint covering. Joints between panels shall be no more than 0.75 inch. Use full wall height slip joints at points of differential settlement when detailed on the plan. Horizontal joints must be provided with a compressible bearing material to prevent concrete to concrete contact.

A minimum of two bearing pads shall be used per panel. The allowable bearing stress shall not exceed 900 psi. The bearing pads shall be preformed EPDM rubber conforming to ASTM D-2000, Grade 2, Type A, Class A with a minimum Durometer Hardness of 80, or high- density polyethylene pads with a minimum density of 0.034 $lb/in^3$ in accordance to ASTM 1505.

An 18-inch wide geotextile shall be used on the backface of the wall panels to cover all panel joints. The geotextile shall meet the physical requirements stated in standard spec 645.2.4 for Geotextile Fabric, Type DF, Schedule B, except that the grab tensile strength shall be a minimum of 180 pounds in both the machine and cross-machine directions. The geotextile shall be attached with a standard construction adhesive suitable for use on concrete surfaces and cold temperatures. The adhesive shall be applied to the panels, not to the geotextile.

All steel portions of the wall system exposed to earth or LFCF backfill shall be galvanized. All soil reinforcement and attachment devices shall be carefully inspected to ensure they are true size and free from defects that may impair the strength and durability.

For cast in place sections of cap and coping, use poured concrete masonry Grade A, A-FA, A-S, A-T, A-IS or A-IP concrete conforming to standard spec 501 as modified in standard spec 716. Provide QMP for cast in place cap and coping concrete as specified in standard spec 716, Class II Concrete.

Use a wall leveling pad that consists of poured concrete masonry, Grade A, A-FA, A-S, A-T, A-IS or A-IP concrete conforming to standard spec 501 as modified in standard spec 716. Provide QMP for leveling pad concrete as specified in standard spec 716, Class III Concrete.

The minimum embedment to the top of the leveling pad shall be 1 foot 6 inches or as given on the plan or given in AASHTO LRFD 11.10.2.2 whichever is greater. Step the leveling pad to follow the general slope of the ground line. The leveling pad's steps shall keep the bottom of the wall within one half the panel heights of the minimum embedment i.e. the minimum embedment plus up to one half the height of one panel. Additional embedment may be detailed by the contractor, but will not be measured for payment.

**B.3.2 Backfill**

Furnish and place backfill for mechanically stabilized earth concrete panel walls as shown on the plans and as hereinafter provided.

**B.3.2.1 LFCF Backfill**

Furnish LFCF backfill for mechanically stabilized earth concrete panel with traffic barrier walls LRFD LFCF as shown on the plans and as hereinafter provided. Provide LFCF material meeting the requirements specified in SPV Article Lightweight Foamed Concrete Fill Grade 1 and Lightweight Foamed Concrete Fill Grade 2 included in the contract.

**B.3.2.3 Transition Zone Backfill**

In the LFCF transition zone indicated on the plans, where the MSE wall backfill transitions from LFCF backfill to conventional MSE granular backfill, provide and use backfill that consists of natural sand or a mixture of sand with gravel, crushed gravel or crushed stone. It shall not contain recycled or milled asphalt, recycled concrete, foundry sand, bottom ash, blast furnace slag or other potentially corrosive material.

Provide material conforming to the following gradation requirements as per AASHTO T27.

| Sieve Size | Percentage by Weight Passing |
|---|---|
| 1 inch | 100 |
| No. 40 | 0 – 60 |
| No. 200 | 0 – 15 |

The material shall have a liquid limit not greater than 25, as per AASHTO T89, and a plasticity index not greater than 6, as per AASHTO T90. Provide the percent by weight, passing the #4 sieve.

In addition, backfill material shall meet the following requirements.

| Test | Method | Value |
|---|---|---|
| pH | AASHTO T-289 | 5 – 10.0 |
| Sulfate content | AASHTO T-290 | 200 ppm max. |
| Chloride content | AASHTO T-291 | 100 ppm max. |
| Electrical Resistivity | AASHTO T-288 | 3000 ohm/cm min. |
| Organic Content | AASHTO T-267 | 1.0% max. |
| Angle of Internal Friction | AASHTO T-236* | 30 degrees min. (At 95.0% of maximum density and optimum moisture, per AASHTO T99, or as modified by C.2.) |

*If the amount of P-4 material is greater than 60%, use AASHTO 236 with a standard-size shear box. Test results of this method may allow the use of larger angles of internal friction, up to the maximum allowed by this specification.

If the amount of P-4 material is less than or equal to 60%, two options are available to determine the angle of internal friction. The first method is to perform a fractured faces count, per ASTM 5821, on the R-4 material. If more than 90% of the material is fractured on one face and more than 50% is fractured on two faces, the material meets the specifications and the angle of internal friction can be assumed to be 30 degrees. The second method allows testing all P-1" material, as per AASHTO T-236, with a large shear box. Test results of this second method may allow the use of larger angles of internal friction, up to the maximum allowed by this specification.

Prior to placement of the backfill, obtain and furnish to the engineer a certified report of test results that the backfill material complies with the requirements of this specification. Specify the method used to determine the angle of internal friction. This certified report of test shall be less than 6 months old. Tests will be performed by a certified independent laboratory. In addition, when backfill characteristics and/or sources change, provide a certified report of tests for the new backfill material. Additional certified reports of tests (except Angle of Internal Friction test), are also required. These additional backfill tests may be completed at the time of material production or material placement, with concurrence of the engineer. If this additional testing is completed at the time of material production, complete testing for every 2000 cubic yards of backfill or portion thereof. If this additional testing is completed at the time of material placement, complete testing for every 2000 cubic yards of backfill, or portion thereof, used per wall. All certified report of test results shall be less than 6 months old and performed by a certified independent laboratory.

## C Construction

### C.1 Excavation and Backfill

Excavation will encompass preparing the leveling pad foundation and the area below the reinforcing strips in accordance to standard spec 206. The volume of excavation covered is limited to the width of the reinforced mass and to the depth of the leveling pad unless shown or noted otherwise on the plan. At the end of each working day, provide good temporary drainage such that the backfill shall not become contaminated with run-off soil or water if it should rain. Do not stockpile or store materials or large equipment within 10 feet of the back of the wall.

### C.2 Backfill

#### C.2.1 LFCF Backfill

Submit an LFCF placement plan, trial batch test results, and quality assurance samples per C.1 of the SPV Article Lightweight Foamed Concrete Fill Grade 1 and Lightweight Foamed Concrete Fill Grade 2 included in the contract. Place LFCF backfill in accordance to the requirement specified in SPV Article Lightweight Foamed Concrete Fill Grade 1 and Lightweight Foamed Concrete Fill Grade 2 included in the contract.

#### C.2.2 Transition Zone Granular Backfill Compaction

Place and compact all granular backfill placed in the LFCF transition zone indicated on the plans behind the wall as specified in standard spec 207.3.6. Compact the backfill to 95.0% of maximum dry density as determined by AASHTO T-99 (modified to compute densities to the nearest 0.1 pcf), or as modified as follows. If the gradation of the granular backfill is such that the P-200 material is less than 7% and the P-40 is less than 30%, a one-point Proctor test can be conducted in place of the 5-point Proctor. To complete this one-point test, compact the sample at a moisture content of 6%, then compute the actual (as-tested) sample moisture after completion of the test. Use Method B or D, and perform this test without removing oversize particles and without correction for coarse particles, as per AASHTO T224. The one-point as-tested moisture content represents the optimum moisture, and the measured one-point density represents the maximum wet density of the material. From these values, the maximum dry density can be computed.

Ensure adequate moisture is present in the backfill during placement and compaction to prevent segregation and to help achieve compaction.

Compaction of backfill within 3 feet of the back face of the wall should be accomplished using lightweight compaction devices. Use of heavy compaction equipment or vehicles should be avoided within 3 feet of the panels.

#### C.2.3 MSE Reinforcement

Bending of MSE reinforcement that result in a kink in the reinforcement shall not be allowed. If skewing of the reinforcement is required due to obstructions in the reinforced fill, the maximum skew angle shall not exceed 15 degrees from the normal position unless a greater angle is shown on the plans. The adequacy of the skewed reinforcement in such a case shall be addressed by supporting calculations.

For embedment in LFCF backfill, place MSE reinforcement that will become embedded in the next lift of LFCF prior to placing the LFCF lift. Provide temporary supports to hold the MSE reinforcement a minimum of 4" above the previously placed LFCF backfill so that the MSE reinforcement becomes fully encapsulated in the subsequent LFCF lift placement. Provide adequate supports to hold the MSE reinforcement in an approximate horizontal position with no kinks, sharp bends or abrupt changes in direction in the reinforcement. Do not lay the MSE reinforcement directly on the top of the prior LFCF placement or otherwise locate the MSE reinforcement along cold joints between LFCF placements.

For embedment of MSE reinforcements in granular backfill, place and compact the MSE backfill to the level of the next higher layer of MSE reinforcement before placing the MSE reinforcement or connecting it to the wall facing. The MSE reinforcement shall lay horizontally on the top of the most recently placed and compacted layer of MSE backfill.

**C.3 Panel Tolerances**

As backfill material is placed behind a panel, maintain the panel in its proper inclined position according to the supplier specifications and as approved by the engineer. The supplier shall specify the back batter so that the final position of the wall is vertical. Vertical tolerances and horizontal alignment tolerances shall not exceed ¾-inch when measured along a 10-foot straight edge. The maximum allowable offset in any panel joint shall be ¾-inch. The overall vertical tolerance of the wall (plumbness from top to bottom) shall not exceed ½-inch per 10 feet of wall height. Erect the precast face panels to ensure that they are located within 1 inch from the contract plan offset at any location to ensure proper wall location at the top of the wall. Provide a ¾-inch joint separation between all adjacent face panels to prevent direct concrete-to-concrete contact. Maintain this gap by the use of bearing pads and/or alignment pins. Failure to meet this tolerance shall cause the engineer to require the contractor to disassemble and re-erect the affected portions of the wall. In addition, imperfect molding, honeycombing, cracking or severe chipping of panels shall be cause of panel rejection.

**C4 Quality Management Program**

**C.4.1 Quality Control Plan**

Submit a comprehensive written quality control plan to the engineer at or before the pre-construction meeting. Do not perform MSE wall construction work before the engineer reviews and accepts the plan. Construct the project as the plan provides.

Do not change the quality control plan without the engineer's review and acceptance. Update the plan with changes as they become effective. Provide a current copy of the plan to the engineer and post in the contractor's laboratory as changes are adopted. Ensure that the plan provides the following elements:

- An organizational chart with names, telephone numbers, current certifications and/or titles, and roles and responsibilities of QC personnel.
- The process used to disseminate QC information and corrective action efforts to the appropriate persons. Include a list of recipients, the communication process that will be used, and action time frames.
- A list of source locations, section and quarter descriptions, for all aggregate materials requiring QC testing.
- Descriptions of stockpiling and hauling methods.
- An outline for resolving a process control problem. Include responsible personnel, required documentation, and appropriate communication steps.
- Location of the QC laboratory, retained sample storage, and other documentation.
- A summary of the locations and calculated quantities to be tested under this provision.

**C.4.2 Quality Control Personnel**

Perform the quality control sampling, testing, and documentation required under this provision using HTCP certified technicians. Have a HTCP Level I Grading Technician, Level I Aggregate Technician, or Assistant Certified Aggregate Technician (ACT) present at the each grading site during all wall backfill placement, compaction, and nuclear testing activities. Have a HTCP Level I Nuclear Density Technician or Assistant Certified Nuclear Density Technician (ACT) perform field density and field moisture content testing.

If an Assistant Certified Technician (ACT) is performing sampling or testing, a certified technician must coordinate and take responsibility for the work an ACT performs. Have a certified technician ensure that all sampling and testing is performed correctly, analyze test results, and post resulting data. No more than one ACT can work under a single certified technician.

**C.4.3 Equipment**

Furnish the necessary equipment and supplies for performing quality control testing. Ensure that all testing equipment conforms to the equipment specifications applicable to the required testing methods. The engineer may inspect the measuring and testing devices to confirm both calibration and condition. Calibrate all testing equipment according to the CMM and maintain a calibration record at the laboratory.

Furnish nuclear gauges from the department's approved product list at http://www.atwoodsystems.com/materials. Ensure that the gauge manufacturer or an approved calibration service calibrates the gauge the same calendar year it is used on the project. Retain a copy of the calibration certificate with the gauge.

Conform to ASTM D 6938 and CMM 8.15 for density testing and gauge monitoring methods. Perform nuclear gauge measurements using gamma radiation in the backscatter or direct transmission position. Perform each test for 4 minutes of nuclear gauge count time.

Split each Proctor sample and identify so as to provide comparison with the department's test results. Unless the engineer directs otherwise, retain the QC split samples for 14 calendar days and promptly deliver the department's split samples to the department

**C.4.4 Quality Control (QC) Testing**

**C4.4.1 LFCF Backfill**

**C4.4.1.1 Cast Density of Field Installed LFCF**

Test cast density in accordance to ASTM C 796

1. Prior to placement of the initial batch, the installer shall check the density and adjust the mix as required to obtain the manufacturer's specified cast density at point of placement.
2. At hourly intervals during placement, monitor the density and adjust as necessary to maintain the specified cast density.

**C.4.4.1.2 Strength Testing**

Conduct strength testing in accordance to ASTM C 796 except do not oven dry the test specimens.

1. Furnish a sufficient quantity of molded and cured cylinders measuring 3-inches in diameter by 6-inches high for required strength tests. Provide molds, and a similar curing environment of the LFCF being tested. Prepare cylinders in accordance to ASTM C1064.
2. Provide certified strength test results to the engineer for acceptance. At a minimum, conduct a set of three strength tests at 1, 2, and 28 day intervals for each 500 cubic yards of LFCF placed and a minimum of two sets of four cylinders each per day
3. Perform the compressive strength testing at a department qualified laboratory meeting the requirements of C.5 in SPV Article Lightweight Foamed Concrete Fill Grade 1 and Lightweight Foamed Concrete Fill Grade 2 included in the contract.

**C4.4.2 Granular Backfill**

Perform compaction testing on the granular backfill. Conform to CMM 8.15 for testing and gauge monitoring methods. Conduct testing at a minimum frequency of 1 test per 150 cubic yards of backfill, or major portion thereof. A minimum of one test for every lift is required. Deliver documentation of all compaction testing results to the engineer at the time of testing.

Perform 1 gradation test every 750 cubic yards of fill and one 5-point Proctor test (or as modified in C.2) every 2000 cubic yards of fill. Provide the region split samples of both within 72 hours of sampling, at the region laboratory. Test sites shall be selected using ASTM Method D3665. Provide Proctor test results to the engineer within 48 hours of sampling. Provide gradation test results to the engineer within 24 hours of sampling.

### C.4.5 Department Testing

#### C.4.5.1 General

(1) The department will conduct verification testing to validate the quality of the product and independent assurance testing to evaluate the sampling and testing. The department will provide the contractor with a listing of names and telephone numbers of all QV and IA personnel for the project, and provide test results to the contractor within two business days after the department obtains the sample.

#### C.4.5.2 Quality Verification (QV) Testing

(1) The department will have an HTCP technician, or ACT working under a certified technician, perform QV sampling and testing. Department verification testing personnel must meet the same certification level requirements specified in C.4.2 for contractor testing personnel for each test result being verified. The department will notify the contractor before sampling so the contractor can observe QV sampling.

(2) The department will conduct QV tests at the minimum frequency of 30% of the required contractor cast density, compressive strength, density, Proctor and gradation tests.

(3) The department will obtain LFCF material for cast density and compressive strength tests at random intervals independent of the contractor's QC work. For granular backfill the department will locate density tests and gradation samples randomly, at locations independent of the contractor's QC work. The department will split each Proctor and gradation QV sample, testing half for QV, and retaining the remaining half for 10 business days.

(4) The department will conduct cast density, compressive strength, QV Proctor and gradation tests in a separate laboratory and with separate equipment from the contractor's QC tests. The department will use the same methods specified for QC testing.

(5) The department will assess QV results by comparing to the appropriate specification limits. If QV test results conform to this special provision, the department will take no further action. If density QV test results are nonconforming, the area shall be reworked until the density requirements of this special provision are met. If the cast density, compressive strength or gradation test results are nonconforming, standard spec 106.5 will apply. Differing QC and QV nuclear density values of more than 1.5 pcf will be investigated and resolved. QV density tests will be based on the appropriate QC Proctor test results, unless the QV and QC Proctor result difference is greater than 3.0 pcf. Differing QC and QV Proctor values of more than 3.0 pcf will be investigated and resolved. Differing QC and QV cast density and compressive strength test values of more than 4% will be investigated and resolved.

### C.4.5.3 Independent Assurance (IA)

(1) Independence assurance is unbiased testing the department performs to evaluate the department's QV and the contractor's QC sampling and testing, including personnel qualifications, procedures, and equipment. The department will perform an IA review according to the department's independent assurance program. That review may include one or more of the following:

1. Split sample testing.
2. Proficiency sample testing.
3. Witnessing sampling and testing.
4. Test equipment calibration checks.
5. Reviewing required worksheets and control charts.
6. Requesting that testing personnel perform additional sampling and testing.

(2) If the department identifies a deficiency, and after further investigation confirms it, correct that deficiency. If the contractor does not correct or fails to cooperate in resolving identified deficiencies, the engineer may suspend placement until action is taken. Resolve disputes as specified in C.4.5.4.

### C.4.5.4 Dispute Resolution

(1) The engineer and contractor should make every effort to avoid conflict. If a dispute between some aspect of the contractor's and the engineer's testing program does occur, seek a solution mutually agreeable to the project personnel. The department and contractor may review the data, examine data reduction and analysis methods, evaluate sampling and testing procedures, and perform additional testing. Use ASTM E 178 to evaluate potential statistically outlying data.

(2) Production test results, and results from other process control testing, may be considered when resolving a dispute.

(3) If the project personnel cannot resolve a dispute, and the dispute affects payment or could result in incorporating non-conforming product or work, the department will use third party testing to resolve the dispute. The department's central office laboratory, or a mutually agreed on independent testing laboratory, will provide this testing. The engineer and contractor will abide by the results of the third party tests. The party in error will pay service charges incurred for testing by an independent laboratory. The department may use third party test results to evaluate the quality of questionable materials and determine the appropriate payment. The department may reject material or otherwise determine the final disposition of nonconforming material as specified in standard spec 106.5.

## C.5 Dampproofing

Apply dampproofing conforming to standard spec 516 to the final horizontal and vertical surfaces of the LFCF material at locations designated on the plans.

**C.6 Geotechnical Information**
Geotechnical data to be used in the design of the wall is given on the wall plan. After completing wall excavation of the entire reinforced soil zone, notify the department and allow the Regional Geotechnical Engineer two working days to review the foundation.

**D Measurement**
The department will not measure Wall Concrete Panel With Traffic Barrier Mechanically Stabilized Earth LRFD/LFCF. The department will use pay plan quantity according to the Pay Plan Quantity article. No measurement of quantities shall be made in the field. Unless the engineer directs in writing, a change to the limits indicated on the contract plan, wall area constructed above or below these limits will not be measured for payment.

**E Payment**
The department will pay for plan quantities according to the Pay Plan Quantity article at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4760 | Wall Concrete Panel With Traffic Barrier Mechanically Stabilized Earth LRFD/LFCF | SF |

Payment is full compensation for supplying a design and shop drawings; preparing the site, including all necessary excavation and disposal of materials; supplying all necessary wall components to produce a functional system including cap and copings; constructing the retaining system including integral traffic barrier on top of the wall, providing and placing LFCF and granular backfill, compacting, developing/completing/documenting the quality management program, performing cast density, compressive strength and compaction testing.

Any required topsoil, fertilizer, seeding or sodding and mulch will be paid for at the contract unit price of topsoil, fertilizer, seeding or sodding and mulch, respectively.

Dampproofing will be measured and paid for separately in accordance to standard spec 516.

## 386. Temporary Wall Wire Faced Mechanically Stabilized Earth LRFD/QMP, Item SPV.0165.4770.

**A Description**
This special provision describes designing, furnishing materials and erecting a temporary earth retention system in accordance to the lines, dimension, elevations and details as shown on the plans and provided in the contract.

This special provision describes the quality management program (QMP) for MSE walls. A quality management program is defined as all activities, including process control, inspection, sampling and testing, and necessary adjustments in the process that are related to the construction of the MSE wall, which meets all the requirements of this provision.

This special provision describes contractor quality control (QC) sampling and testing for backfill density testing, documenting those results, and documenting related production and placement process changes. This special provision also describes department quality verification (QV), independent assurance (IA), and dispute resolution.

Chapter 8 of the department's construction and materials manual (CMM) provides additional detailed guidance for QMP work and describes sampling and testing procedures. The contractor may obtain the CMM from the department's web site at:
http://wisconsindot.gov/Pages/doing-bus/eng-consultants/cnslt-rsrces/rdwy/cmm.aspx

## B Materials

### B.1 Proprietary Wire Faced Mechanically Stabilized Earth Wall Systems

The supplied wall system must be from the department's approved list of Wire Faced Mechanically Stabilized Earth Wall systems (Wire Faced MSE Walls).

Proprietary wall systems may be used for this work, but must conform to the requirements of this specification and be pre-approved for use by the department's Bureau of Structures, Structures Design Section. The department maintains a list of pre-approved Wire Faced Mechanically Stabilized Earth (Wire Faced MSE) Wall systems. The name of the pre-approved proprietary wall system selected shall be furnished to the engineer within 25 days after the award of contract.

To receive pre-approval, the retaining wall system must comply with all pertinent requirements of this provision. Applications for pre-approval may be submitted at any time. Applications must be prepared in accordance to the requirements of Chapter 14 of the department's current LRFD Bridge Manual. Information and assistance with the pre-approval process can be obtained by contacting the Structures Design Section in Room 601 of the Hill Farms State Transportation Building in Madison or by calling (608) 266-8494.

### B.2 Design Requirements

It is the responsibility of the contractor to supply a design and supporting documentation as required by this special provision for review by the department to show the proposed wall design is in compliance with the design specifications. Four copies of the following shall be submitted to the engineer for review and acceptance no later than 60 days from the date of notification to proceed with the project.

The plans and shop drawings shall be prepared on reproducible sheets 11 inch x 17 inch, including borders. Each sheet shall have a title block in the lower right corner. The title block shall include the project identification number and structure number. Design calculations and notes shall be on 8 ½ inch x 11 inch sheets, and shall contain the project identification number, name or designation of the wall, date of preparation, initials of designer and checker, and page number at the top of the page. All plans, shop drawings, and calculations shall be signed, sealed and dated by a professional engineer licensed in the State of Wisconsin.

The design of the Wire Faced MSE Walls shall be in compliance with the *AASHTO LRFD Bridge Design Specifications 5th Edition 2010*, (AASHTO LRFD) with latest interim specifications for Mechanically Stabilized Earth Walls, WisDOT's current *Standard Specifications for Highway and Structure Construction* (Standard Specifications), Chapter 14 of the WisDOT LRFD Bridge Manual and standard engineering design procedures as determined by the department. Loads, load combinations, load and resistance factors shall be as specified in AASHTO LRFD Section 11. The associated resistance factors shall be defined in accordance to Table 11.5.6-1 LRFD.

Design and construct the walls in accordance to the lines, grades, heights and dimensions shown on the plans, as herein specified, and as directed by the engineer. If the wall is installed in front of a bridge abutment or wing, it shall also be designed to resist the applied abutment/bridge lateral forces specified on the contract plans.

Walls parallel to supporting highway traffic shall be designed for the effects of highway surcharge loading equivalent of 2 feet soil surcharge weight or 240 psf. The design shall also consider the traffic barrier impact where applicable. Walls that do not carry highway traffic shall be designed for a live load surcharge of 100 psf in accordance to Chapter 14 of the WisDOT LRFD Bridge Manual or as stated on the plans.

A maximum value of the angle of internal friction of the wall backfill material used for design shall be assumed to be 30 degrees without a certified report of tests. If a certified report of tests yields an angle of internal friction greater than 30 degrees, the larger test value may be used for design, up to a maximum value of 36 degrees.

An external stability check at critical wall stations showing Capacity Demand Ratios (CDR) for sliding, eccentricity, and bearing checks is performed by the department and are provided in the wall plans.

The design of the Wire Faced MSE Walls by the contractor shall consider the internal and compound stability of the wall mass in accordance to AASHTO LRFD 11.10.6. The internal stability shall include soil reinforcement pullout, soil reinforcement rupture, and panel-reinforcement connection failure at each soil reinforcement level. The design shall be performed using the Simplified Method or Coherent Gravity Method. Calculations for factored stresses and resistances shall be based upon assumed conditions at the end of the design life. Compound stability shall be computed for the applicable strength limits.

The minimum embedment of the Wire Faced MSE wall shall be 1 foot 6 inches, or as given on the contract plan. Frost depth shall not be considered. Additional embedment may be detailed by the contractor, but will not be measured for payment. The wall facings shall be designed in accordance to AASHTO 11.10.2.3. A fine metallic screen and a geotextile filter fabric shall be used at the front face of the wall to retain the fines of the soil mass.

The nominal long term design strength to be used in steel reinforcement and connector design shall consider the corrosion losses and based upon conditions at the end of the design life. The minimum length of soil reinforcement measured from the back face of the wall shall be equal to 0.7 of the wall height or as shown on the plan. In no case shall this length be less than 8 feet. The soil reinforcement shall be the same length from the bottom to the top of each wall section. All soil reinforcement layers shall be connected to facings. The soil reinforcement shall extend 3 feet beyond the theoretical failure plane in all cases. The maximum vertical spacing of soil reinforcement layers shall be 24 inches. The uppermost layer of the reinforcement shall be located between 6" and 12" below the bottom of an overlying slab, footing or top of the wall. The upper layers of the soil reinforcement shall also be checked to verify that they have sufficient tensile resistance against traffic barrier impact where applicable.

Soil reinforcement shall be fabricated or designed to avoid piling, drainage structures or other obstacles in the fill without field modifications. Cutting or altering of the basic structural section of either the strip or grid at the site is prohibited unless approved by the Structures Design Section. A minimum clearance of 3" shall be maintained between any obstruction and reinforcement unless otherwise approved by the Structures Design Section. Splicing steel reinforcement is not allowed unless approved by the Structures Design Section.

Submit the following to the engineer for review: complete design calculations, explanatory notes, supporting materials, specifications, and detailed plans and shop drawings for the proposed wall system. Sample analyses and hand output shall be submitted to verify the output by the software. The design calculations and notes shall clearly indicate the Capacity to Demand Ratios (CDR) for all internal stabilities as defined in AASHTO LRFD.

The wall submittal package shall be submitted electronically to the engineer and the Structures Design Section. Submit all required information no later than 30 days prior to beginning construction of the wall. The detailed plans and shop drawings shall include all details, dimensions, quantities and cross-sections necessary to construct the walls.

### B.3 Wall System Components

Materials furnished for wall system components under this contract shall conform to the requirements of this specification. All certifications related to material and components of the wall systems specified in this subsection shall be submitted to the engineer.

#### B.3.1 Steel Components

Provide steel reinforcement that meets the following requirements:

**B.3.1.1 Welded Wire Fabric Soil Reinforcement**
Provide shop fabricated welded wire reinforcement from cold drawn steel wire that has a yield stress of 65,000 psi and conforming to the minimum requirements of ASTM A-82 and be welded into the finished configuration in accordance to ASTM A-185. Replace welded wire fabric that has been damaged during handling, placing or backfilling at the direction of the engineer, at no expense to the department.

**B.3.1.2 Steel Reinforcing Strips and Tie Strips**
As an alternate to Welded Wire Reinforcing mesh, provide Steel Reinforcing strips or ladder Reinforcing strips or equal, hot-rolled from bars, to the required shape and dimensions meeting the requirements of ASTM A-572 Grade 65 minimum. Tie strips shall be shop fabricated of hot-rolled steel meeting the requirements of ASTM A-1011 Grade 50.

**B.3.1.3 Welded Wire Fabric Facing Panels**
Provide welded wire fabric that is used to fabricate the facings of the wire-Faced wall that has a yield stress of 65,000 psi. All steel shall be shop fabricated of cold drawn steel wire conforming to the minimum requirements of ASTM A-82 and be welded into the finished configuration in accordance to ASTM A-185. Replace welded wire fabric that has been damaged during handling, placing or backfilling at the direction of the engineer, at no expense to the department.

**B.3.1.4 Fasteners**
High strength bolts meeting the requirements of AASHTO M164 or equivalent.

**B.3.1.5 Connector Pins and Mat Bars**
Connector pins and mat bars fabricated from cold drawn steel wire meeting the requirements of ASTM A-82.

**B.3.1.6 Metallic Screen**
Provide a steel metallic screen. The metallic screen should have an approximate opening of ¼" and be made of 0.025" (minimum) diameter welded wire.

**B.3.2 Geotextile Filter Fabric**
Geotextile filter fabric shall be used behind the metallic screen. Provide two layers of geotextile fabric when called for in the plans. Use geotextile as recommended by the wall manufacturer. If none is recommended, use Type DF (schedule B) as shown in standard spec 645 or as specified on the contract plans. Deliver geotextile fabric in a protective wrap and keep it protected from ultraviolet light until it is incorporated into the work.

**B.3.3 Backfill**
Furnish and place backfill for Wire- Faced MSE wall as shown on the plans and as herein provided.

Provide and use material that consists of natural sand or a mixture of sand with gravel, crushed gravel or crushed stone. It shall not contain foundry sand, bottom ash, blast furnace slag, crushed/recycled concrete, crushed/milled asphaltic concrete or other potentially corrosive material.

Provide material that conforms to the following gradation requirements as per AASHTO T27.

| Sieve Size | % by Weight Passing |
|---|---|
| 1 inch | 100 |
| No. 40 | 0-60 |
| No. 200 | 0-15 |

The material shall have a liquid limit not greater than 25, as per AASHTO T89, and a plasticity index not greater than 6, as per AASHTO T90. Provide the percent by weight, passing the #4 sieve.

In addition, backfill material shall meet the following requirements.

| Test | Method | Value |
|---|---|---|
| pH | AASHTO T-289 | 5 – 10.0 |
| Sulfate content | AASHTO T-290 | 200 ppm max. |
| Chloride content | AASHTO T-291 | 100 ppm max. |
| Electrical Resistivity | AASHTO T-288 | 3000 ohm/cm min. |
| Organic Content | AASHTO T-267 | 1.0% max. |
| Angle of Internal Friction | AASHTO T-236* | 30 degrees min. (At 95.0% of maximum density and optimum moisture, per AASHTO T99, or as modified by C.1) |

*If the amount of P-4 material is greater than 60%, use AASHTO 236 with a standard-size shear box. Test results of this method may allow the use of larger angles of internal friction, up to the maximum allowed by this specification.

If the amount of P-4 material is less than or equal to 60%, two options are available to determine the angle of internal friction. The first method is to perform a fractured faces count, per ASTM 5821, on the R-4 material. If more than 90% of the material is fractured on one face and more than 50% is fractured on two faces, the material meets the specifications and the angle of internal friction can be assumed to be 30 degrees. The second method allows testing all P-1" material, as per AASHTO T-236, with a large shear box. Test results of this second method may allow the use of larger angles of internal friction, up to the maximum allowed by this specification.

Prior to placement of the backfill, obtain and furnish to the engineer a certified report of test results that the backfill material complies with the requirements of this specification. Specify the method used to determine the angle of internal friction. This certified report of test shall be less than 6 months old. Tests will be performed by a certified independent laboratory. In addition, when backfill characteristics and/or sources change, provide a certified report of tests for the new backfill material. Additional certified report of tests (except Angle of Internal Friction test), are also required. These additional backfill tests may be completed at the time of material production or material placement, with concurrence of the engineer. If this additional testing is completed at the time of material production, complete testing for every 2000 cubic yards of backfill or portion thereof. If this additional testing is completed at the time of material placement, complete testing for every 2000 cubic yards of backfill, or portion thereof, used per wall. All certified report of these test results shall be less than 6 months old and performed by a certified independent laboratory.

## C Construction

### C.1 Methods

All excavation and preparation of the foundation for the Temporary Wire Faced Mechanically Stabilized Earth wall shall be in accordance to standard spec 206. The volume of excavation covered is limited to the width of the reinforced mass and to the depth of the bottom of the wall unless shown or noted otherwise on the plan. At the end of each working day, provide good temporary drainage such that the backfill shall not become contaminated with run-off soil or water if it should rain. Do not stockpile or store any materials or large equipment within 10 feet of the back of the wall.

Stagger vertical joints in the welded wire facing.

Compact all backfill behind the wall as specified in standard spec 207.3.6. Compact the backfill to 95.0% of maximum dry density as determined by AASHTO T-99 (modified to compute densities to the nearest 0.1 pcf) or as modified as follows. If the gradation of the granular backfill is such that the P-200 material is less than 7% and the P-40 is less than 30%, a one-point Proctor test can be conducted in place of the 5-point Proctor. To complete this one-point test, compact the sample at a moisture content of 6%, then compute the actual (as-tested) sample moisture after completion of the test. Use Method B or D, and perform this test without removing oversize particles and without correction for coarse particles, as per AASHTO T224. The one-point as-tested moisture content represents the optimum moisture, and the measured one-point density represents the maximum wet density of the material. From these values, the maximum dry density can be computed.

Ensure adequate moisture is present in the backfill during placement and compaction to prevent segregation and to help achieve compaction.

Compaction of backfill within 3 feet of the back face of the wall should be accomplished using lightweight compaction devices. Use of heavy compaction equipment or vehicles should be avoided within 3 feet of the wall face.

Erect welded wire facing and other associated elements according to the wall manufacturer's construction guide. Place and compact the MSE backfill to the level of the next higher layer of MSE reinforcement before placing the MSE reinforcement or connecting it to the wall facing. Place remaining courses in vertical or battered positions as shown on the contract plans.

The MSE reinforcement shall lay horizontally on top of the most recently placed and compacted layer of MSE backfill. Bending of MSE reinforcement that result in a kink in the reinforcement shall not be allowed. If skewing of the reinforcement is required due to obstructions in the reinforced fill, the maximum skew angle shall not exceed 15 degrees from the normal position unless a greater skew angle is shown on the wall shop drawings. The adequacy of the skewed reinforcement in such a case shall be addressed by supporting calculations.

When the wall is considered temporary (but will have any geotextile material exposed to ultraviolet light for four months or more), or the installation of a permanent wall facing will not occur for four months or more after placement of any geotextile material, cover the exposed geotextile material in the wall as quickly as practical, to prevent damage caused by exposure to ultraviolet light.

**C.2 Tolerances**

The overall vertical tolerance of the wall and the horizontal alignment tolerance shall not exceed 3 inches per 10 feet for temporary installations.

For battered wire facing, the final deviation from the design batter shall be within ±1 inch for each 10 feet of battered wall height.

**C.3 Quality Management Program**

**C.3.1 Quality Control Plan**

Submit a comprehensive written quality control plan to the engineer at or before the pre-construction meeting. Do not perform MSE wall construction work before the engineer reviews and accepts the plan. Construct the project as the plan provides.

Do not change the quality control plan without the engineer's review and acceptance. Update the plan with changes as they become effective. Provide a current copy of the plan to the engineer and post in the contractor's laboratory as changes are adopted. Ensure that the plan provides the following elements:

1. An organizational chart with names, telephone numbers, current certifications and/or titles, and roles and responsibilities of QC personnel.
2. The process used to disseminate QC information and corrective action efforts to the appropriate persons. Include a list of recipients, the communication process that will be used, and action time frames.
3. A list of source locations, section and quarter descriptions, for all aggregate materials requiring QC testing.

4. Descriptions of stockpiling and hauling methods.
5. An outline for resolving a process control problem. Include responsible personnel, required documentation, and appropriate communication steps.
6. Location of the QC laboratory, retained sample storage, and other documentation.
7. A summary of the locations and calculated quantities to be tested under this provision.

**C.3.2 Quality Control Personnel**

Perform the quality control sampling, testing, and documentation required under this provision using HTCP certified technicians. Have a HTCP Level I Grading Technician, Level I Aggregate Technician, or Assistant Certified Aggregate Technician (ACT) present at the each grading site during all wall backfill placement, compaction, and nuclear testing activities. Have a HTCP Level I Nuclear Density Technician or Assistant Certified Nuclear Density Technician (ACT) perform field density and field moisture content testing.

If an Assistant Certified Technician (ACT) is performing sampling or testing, a certified technician must coordinate and take responsibility for the work an ACT performs. Have a certified technician ensure that all sampling and testing is performed correctly, analyze test results, and post resulting data. No more than one ACT can work under a single certified technician.

**C.3.3 Equipment**

Furnish the necessary equipment and supplies for performing quality control testing. Ensure that all testing equipment conforms to the equipment specifications applicable to the required testing methods. The engineer may inspect the measuring and testing devices to confirm both calibration and condition. Calibrate all testing equipment according to the CMM and maintain a calibration record at the laboratory.

Furnish nuclear gauges from the department's approved product list at http://www.atwoodsystems.com/materials. Ensure that the gauge manufacturer or an approved calibration service calibrates the gauge the same calendar year it is used on the project. Retain a copy of the calibration certificate with the gauge.

Conform to ASTM D 6938 and CMM 8.15 for density testing and gauge monitoring methods. Perform nuclear gauge measurements using gamma radiation in the backscatter or direct transmission position. Perform each test for 4 minutes of nuclear gauge count time.

Split each Proctor sample and identify so as to provide comparison with the department's test results. Unless the engineer directs otherwise, retain the QC split samples for 14 calendar days and promptly deliver the department's split samples to the department

### C.3.4 Quality Control (QC) Testing

Perform compaction testing on the backfill. Conform to CMM 8.15 for testing and gauge monitoring methods. Conduct testing at a minimum frequency of 1 test per 150 cubic yards of backfill, or major portion thereof. A minimum of one test for every lift is required. Deliver documentation of all compaction testing results to the engineer at the time of testing.

Perform 1 gradation test every 750 cubic yards of fill and one 5-point Proctor test (or as modified in C.1) every 2000 cubic yards of fill. Provide the region split samples of both within 72 hours of sampling, at the region laboratory. Test sites shall be selected using ASTM Method D3665. Provide Proctor test results to the engineer within 48 hours of sampling. Provide gradation test results to the engineer within 24 hours of sampling.

### C.3.5 Department Testing

#### C.3.5.1 General

(1) The department will conduct verification testing to validate the quality of the product and independent assurance testing to evaluate the sampling and testing. The department will provide the contractor with a listing of names and telephone numbers of all QV and IA personnel for the project, and provide test results to the contractor within 2 business days after the department obtains the sample.

#### C.3.5.2 Quality Verification (QV) Testing

(1) The department will have an HTCP technician, or ACT working under a certified technician, perform QV sampling and testing. Department verification testing personnel must meet the same certification level requirements specified in C.3.2 for contractor testing personnel for each test result being verified. The department will notify the contractor before sampling so the contractor can observe QV sampling.

(2) The department will conduct QV tests at the minimum frequency of 30% of the required contractor density, Proctor and gradation tests.

(3) The department will locate density tests and gradation samples randomly, at locations independent of the contractor's QC work. The department will split each Proctor and gradation QV sample, testing half for QV, and retaining the remaining half for 10 business days.

(4) The department will conduct QV Proctor and gradation tests in a separate laboratory and with separate equipment from the contractor's QC tests. The department will use the same methods specified for QC testing.

(5) The department will assess QV results by comparing to the appropriate specification limits. If QV test results conform to this special provision, the department will take no further action. If density QV test results are nonconforming, the area shall be reworked until the density requirements of this special provision are met. If the gradation test results are nonconforming, standard spec 106.5 will apply. Differing QC and QV nuclear density values of more than 1.5 pcf will be investigated and resolved. QV

density tests will be based on the appropriate QC Proctor test results, unless the QV and QC Proctor result difference is greater than 3.0 pcf. Differing QC and QV Proctor values of more than 3.0 pcf will be investigated and resolved.

### C.3.5.3 Independent Assurance (IA)

(1) Independence assurance is unbiased testing the department performs to evaluate the department's QV and the contractor's QC sampling and testing, including personnel qualifications, procedures, and equipment. The department will perform an IA review according to the department's independent assurance program. That review may include one or more of the following:

1. Split sample testing.
2. Proficiency sample testing.
3. Witnessing sampling and testing.
4. Test equipment calibration checks.
5. Reviewing required worksheets and control charts.
6. Requesting that testing personnel perform additional sampling and testing.

(2) If the department identifies a deficiency, and after further investigation confirms it, correct that deficiency. If the contractor does not correct or fails to cooperate in resolving identified deficiencies, the engineer may suspend placement until action is taken. Resolve disputes as specified in C.3.5.4.

### C.3.5.4 Dispute Resolution

(1) The engineer and contractor should make every effort to avoid conflict. If a dispute between some aspect of the contractor's and the engineer's testing program does occur, seek a solution mutually agreeable to the project personnel. The department and contractor may review the data, examine data reduction and analysis methods, evaluate sampling and testing procedures, and perform additional testing. Use ASTM E 178 to evaluate potential statistically outlying data.

(2) Production test results, and results from other process control testing, may be considered when resolving a dispute.

(3) If the project personnel cannot resolve a dispute, and the dispute affects payment or could result in incorporating non-conforming product or work, the department will use third party testing to resolve the dispute. The department's central office laboratory, or a mutually agreed on independent testing laboratory, will provide this testing. The engineer and contractor will abide by the results of the third party tests. The party in error will pay service charges incurred for testing by an independent laboratory. The department may use third party test results to evaluate the quality of questionable materials and determine the appropriate payment. The department may reject material or otherwise determine the final disposition of nonconforming material as specified in standard spec 106.5.

### C.4 Geotechnical Information

Geotechnical data to be used in the design of the wall is given on the wall plan. After completing wall excavation of the entire reinforced soil zone, notify the department and allow the Regional Soils Engineer two working days to review the foundation.

### D Measurement

The department will not measure Temporary Wall Wire Faced Mechanically Stabilized Earth Wall LRFD/QMP. The department will use pay plan quantity according to the Pay Plan Quantity article. No other measurement of quantities shall be made in the field. Unless the engineer directs in writing, a change to the limits indicated on the contract plan, wall area constructed above or below these limits will not be measured for payment.

### E Payment

The department will pay for plan quantities according to the Pay Plan Quantity article at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4770 | Temporary Wall Wire Faced Mechanically Stabilized Earth LRFD/QMP | SF |

Payment is full compensation for supplying a design and shop drawings; preparing the site, including all necessary excavation and disposal of materials; supplying all necessary wall components to produce a functional system constructing the retaining system, including drainage system; providing backfill, backfilling, compacting, developing/completing/documenting the quality management program, performing compaction testing; and for covering the geotextile. Parapets, railings, abutment bodies and other items above the wall cap or coping will be paid for separately. Vehicle barrier and its support will be paid separately.

Any required topsoil, fertilizer, seeding or sodding and mulch will be paid for at the contract unit price of topsoil, fertilizer, seeding or sodding and mulch, respectively.

## 387. Temporary Shoring Railroad, Item SPV.0165.4775.

### A Description

This special provision describes furnishing and installing temporary shoring at locations alongside railroad tracks as shown in the plan and in accordance to the shoring design requirements.

### B Materials

#### B.1 Shoring Design

Provide an effective shoring system capable of withstanding Coopers E-80 live load surcharge, and which is in compliance with OSHA and Federal Railroad Administration (FRA) requirements. For reference, use “Guidelines For Temporary Shoring” published by Union Pacific Railroad and The Burlington Northern and Santa Fe Railway (BNSF). A copy of these guidelines may be obtained from the department at the Bureau of Railroads and Harbors, 4802 Sheboygan Avenue, Madison, Room 701. Where conflicts exist, the standard specifications, special provisions and plans shall supercede these guidelines.

Refer to standard spec 107.17.1(6) and (7) regarding the development and submittal of shop drawings, detailed plans, and computations for temporary construction near the UPRR's tracks. Include in the submitted drawings and plans the proposed method of installation and removal of the shoring not included in the contract plans. In all calculations, take into consideration railroad surcharge loading and design the shoring to meet Coopers E-80 live loading.

**C Construction**

The UPRR will coordinate train operations with the contractor to the extent possible, consistent with its operational requirements. The number and duration of work windows free of train operations available per day will vary depending on operational requirements. At the end of each window, leave the construction area in a condition that will allow for safe and normal train operations. Do not leave shoring extended above the top of rail within 12'-0" from the centerline of the nearest track. Train operations and available windows for work and hours available for work within windows are subject to change. Contact the following at least three working days in advance of construction operations that require implementation of the temporary shoring:

John Venice
Manager of Special Projects – Industry and Public Projects,
Engineering Department
Union Pacific Railroad Company
101 North Wacker Drive, Suite 1920
Chicago, IL 60606
Telephone: (312) 777-2043
Fax: (402) 233-2769
Email jnvenice@up.com

Provide, install and maintain adequate protection for people within the UPRR's right-of-way. Cover, guard, and/or protect all excavations, holes, or trenches within the UPRR's right-of-way when they are not being worked on. When leaving work site areas at night and over weekends, secure the areas and leave them in a condition that will ensure that railroad employees and other personnel, who may be working or passing through the area, are protected around excavations. Install handrails that are parallel to the track and not less than 9'-0" from the centerline of the nearest track. Handrails, fences, or other barrier methods must meet OSHA and FRA requirements. Backfill all excavations as soon as possible.

Upon completion of the need for the temporary shoring, remove the shoring or cut-off the shoring 4'-6" below the top of the adjacent rail. Backfill the space that is excavated but not occupied by the new permanent construction in accordance to standard spec 206.3.13.

**D Measurement**
The department will measure Temporary Shoring Railroad in area by the square foot, acceptably completed at locations the plans show, measured as the area of exposed face in the plane of the shoring from the ground line in front of the shoring to a maximum of one foot above the retained grade. Shoring used for staged construction in multiple configurations without removal and reinstallation will be measured once based on the configuration with the largest area of exposed face.

**E Payment**
The department will pay for the measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4775 | Temporary Shoring Railroad | SF |

Payment is full compensation for providing a verified design of the shoring; providing shop drawings and detailed plans; furnishing and hauling materials to each location; installing the shoring; maintaining the shoring as needed; removing the shoring; and for backfilling upon completion of the need for the shoring.

Temporary shoring not required by the plans and installed for the convenience of the contractor's operations shall be considered incidental to work under this contract and will not be measured and paid for under this item.

## 388. Geocomposite Drain Board, Item SPV.0165.4780.

**A Description**
This special provision describes supplying and installing prefabricated geocomposite drain board as indicated on the plans. Perform work in accordance to pertinent provisions of the standard specifications, the plans, and as hereinafter provided.

**B Materials**
Use materials that conform to the following:

| Physical Properties | Test Method | Value |
|---|---|---|
| Thickness | | 0.25 inch |
| Flow capacity, (at 3600 psi with I = 1) | ASTM D 4716 (mod) | 9 gpm/ft |
| Geotextile tensile strength | ASTM D 4632 | 100 lb |
| Compressive strength | ASTM D 1621 (mod) | 10,000 lbs/SF |
| Mullen burst | ASTM D 3786 | Min. 200 lb |
| Apparent opening size | ASTM D 4751 | 70 |
| Flow rate | ASTM D 4491 | Min 140 gpm/SF |

**C Construction**
Handle the prefabricated geocomposite drainage board in such a manner as to ensure the geocomposite is not damaged in any way. Take care during the placement of the geocomposite not to entrap dirt or excessive dust in the geocomposite that could cause

clogging of the drainage system. Deliver, store, and handle the geocomposite in accordance to manufacturer's recommendations. Place and secure geocomposite against the retaining wall back face as indicated on the plans with the fabric facing outward towards the backfill. Make seams and overlaps between adjacent boards according to the manufacturer's recommendations and specifications.

**D Measurement**

The department will measure Geocomposite Drain Board in area by the square foot, acceptably completed. The department will not pay for repairs to the geocomposite and will not pay for overlap of drain elements.

**E Payment**

The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4780 | Geocomposite Drain Board | SF |

Payment is full compensation for furnishing, installing, and trimming all materials; and for furnishing all equipment, fasteners, and incidentals necessary to complete the contract work.

## 389. Concrete Staining Previously Constructed Structure, Item SPV.0165.4785.

**A Description**

Furnish and apply a two coat concrete stain to the exposed concrete surfaces of structures constructed but not stained in a prior contract, as detailed in the plans and as hereinafter provided.

**B Materials**

**B.1 Concrete Stain**

Use concrete stain manufactured for use on exterior concrete surfaces, consisting of a base coat and a pigmented sealer finish coat. Use the following products, or equal as approved by the department, as part of the two coat finish system:

Tri-Sheen Concrete Surfacer, Smooth by TK Products
Tri-Sheen Acrylic by TK Products
TK-1450 Natural Look Urethane Anti-Graffiti Primers by TK Products
Safe-Cure and Seal EPX by Chem Masters
H&C Concrete Stain Solid Color Water Based by Sherwin-Williams

**B.2 Mortar**
Use mortar for the modified concrete surface finish as specified in 502.3.7.5 or use one of the following products:

| | |
|---|---|
| Preblended, Packaged Type II Cement: | Tri-Mix by TK Products<br>Thoroseal Pearl Gray by Thoro Products |

The mortar shall contain one of the following acrylic bonding admixtures mixed and applied in accordance to manufacturer's recommendations:

| | |
|---|---|
| Acrylic Bonding Admixture: | TK-225 by TK Products<br>Achro 60 by Thoro Products<br>Achro Set by Master Builders |

**C Construction**
**C.1 General**
Furnish, prepare, apply, cure, and store all materials in accordance to the product manufacturer's specifications for the type and condition of application required.

Match or exceed the stain manufacturer's minimum recommended curing time of the concrete or 28 days, whichever is greater, prior to staining.

**C.2 Modified Concrete Surface Finish**
If not previously completed, provide a modified surface finish by filling all air holes as the engineer directs using mortar as defined in B.2. Before applying the modified surface finish, saturate the concrete surface with water and fill all tie rod holes and large cavities, and remove or correct all fins and irregularities as specified in 502.3.7.1 and 502.3.7.2.

Following the application of the modified concrete surface finish, , clean all concrete surfaces that are to be coated to ensure that the surface is free of all laitance, dirt, dust, grease, efflorescence, and any foreign material and that the surface will accept the coating material according to product requirements. As a minimum, clean the surface using a 3000-psi water blast. Hold the nozzle of the water blaster approximately 6 inches from the concrete surface and move it continuously in a sweeping motion. Give special attention to smooth concrete surfaces to produce an acceptable surface texture. Correct any surface problems resulting from the surface preparation methods. Grit blasting of the concrete surface is not allowed.

**C.3 Staining Concrete Surfaces**
Apply the concrete stain in accordance to the manufacturer's recommendations.

Apply the concrete stain when the temperature of the concrete surface is 45º F or higher, or as given by the manufacturer.

The color of the stain shall be as given on the plan. Tint the base coat to match the finish coat; the two coats shall be compatible with each other.

Do not begin staining the structure until earthwork operations are completed to a point where this work can begin without receiving damage. Where this work is adjacent to exposed soil or pavement areas, provide temporary covering protection from overspray or splatter.

**C.4 Test Areas**
Prior to applying stain to the structure, apply the stain to sample panels measuring a minimum of 48-inches x 48-inches and constructed to demonstrate workmanship in the use of the form liner specified on the structure if applicable. Match or exceed the stain manufacturer's minimum recommended curing time of the concrete or 28 days, whichever is greater, prior to staining. Prepare the concrete surfaces of the sample panels and apply stain using the same materials and in the same manner as proposed for the structure, including staining of the joints between the stones produced by the form liner if applicable. Do not apply stain to the structure until the department approves the test panels.

**C.5 Surfaces to be Coated.**
Apply concrete stain to the surfaces in accordance to the plan.

**D Measurement**
The department will measure Concrete Staining Previously Constructed Structure in area by the square foot of surface, acceptably completed.

**E Payment**
The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4785 | Concrete Staining Previously Constructed Structure | SF |

Payment is full compensation for furnishing and applying the two coat system; for preparing the concrete surface with a modified surface finish; and for preparing the sample panels.
517-110 (20140630)

## 390. Concrete Staining Multi-Color Previously Constructed Structure, Item SPV.0165.4786.

**A Description**
Furnish and apply a multi-color concrete stain to the exposed concrete surfaces of the structure, as detailed in the plans and as hereinafter provided.

**B Materials**
**B.1 Concrete Stain**
Use concrete stain manufactured for use on exterior concrete surfaces. Use the following products, or equal as approved by the department:

Tri-Sheen Concrete Surfacer, Smooth by TK Products
Tri-Sheen Acrylic by TK Products
TK-1450 Natural Look Urethane Anti-Graffiti Primers by TK Products
Safe-Cure and Seal EPX by Chem Masters
H&C Concrete Stain Solid Color Water Based by Sherwin-Williams

**B.2 Mortar**

Use mortar for the modified concrete surface finish as specified in 502.3.7.5 or use one of the following products:

| | |
|---|---|
| Preblended, Packaged Type II Cement: | Tri-Mix by TK Products |
| | Thoroseal Pearl Gray by Thoro Products |

The mortar shall contain one of the following acrylic bonding admixtures mixed and applied in accordance to manufacturer's recommendations:

| | |
|---|---|
| Acrylic Bonding Admixture: | TK-225 by TK Products |
| | Achro 60 by Thoro Products |
| | Achro Set by Master Builders |

**C Construction**

**C.1 General**

Furnish, prepare, apply, cure, and store all materials in accordance to the product manufacturer's specifications for the type and condition of application required.

Match or exceed the stain manufacturer's minimum recommended curing time of the concrete or 28 days, whichever is greater, prior to staining.

**C.2 Modified Concrete Surface Finish**

If not previously completed, provide a modified surface finish by filling all air holes as the engineer directs using mortar as defined in B.2. Before applying the modified surface finish, saturate the concrete surface with water and fill all tie rod holes and large cavities, and remove or correct all fins
and irregularities as specified in 502.3.7.1 and 502.3.7.2.

Following the application of the modified concrete surface finish, clean all concrete surfaces that are to be coated to ensure that the surface is free of all laitance, dirt, dust, grease, efflorescence, and any foreign material and that the surface will accept the coating material according to product requirements. As a minimum, clean the surface using a 3000-psi water blast. Hold the nozzle of the water blaster approximately 6 inches from the concrete surface and move it continuously in a sweeping motion. Give special attention to smooth concrete surfaces to produce an acceptable surface texture. Correct any surface problems resulting from the surface preparation methods. Grit blasting of the concrete surface is not allowed.

**C.3 Staining Concrete Surfaces**
Apply the concrete stain in accordance to the manufacturer's recommendations.

Apply the concrete stain when the temperature of the concrete surface is 45º F or higher, or as given by the manufacturer.

The color of the staining shall produce a multi-color effect that consists of multiple colors replicating varying natural stone coloration. Stain the joints between stones produced by the form liner to create the appearance of grouted joints.

Do not begin staining the structure until earthwork operations are completed to a point where this work can begin without receiving damage. Where this work is adjacent to exposed soil or pavement areas, provide temporary covering protection from overspray or splatter.

**C.4 Test Areas**
Prior to applying stain to the structure, apply the stain to sample panels measuring a minimum of 48-inches x 48-inches and constructed to demonstrate workmanship in the use of the form liner specified on the structure if applicable. Match or exceed the stain manufacturer's minimum recommended curing time of the concrete or 28 days, whichever is greater, prior to staining. Submit color samples to the department prior to staining the sample panels. Prepare the concrete surfaces of the sample panels and apply stain using the same materials and in the same manner as proposed for the structure, including staining of the joints between stones produced by the form liner. Do not apply stain to the structure until the department approves the test panels.

**C.5 Surfaces to be Coated.**
Apply concrete stain to the surfaces in accordance to the plan.

**D Measurement**
The department will measure Concrete Staining Multi-Color Previously Constructed Structure, in area by the square foot of surface, acceptably completed.

**E Payment**
The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4786 | Concrete Staining Multi-Color Previously Constructed Structure | SF |

Payment is full compensation for furnishing and applying the coloring system; for preparing the concrete surface with a modified surface finish; and for constructing and staining the sample panels.

## 391. Prestressed Precast Concrete Wall Panel, Item SPV.0165.4790.

### A Description

This section describes constructing prestressed precast concrete wall panels with thickness and patterns as shown on the plans including product design, fabrication, transportation, erection, and other related items.

These specifications provide for prestressing concrete panels by the pretensioning method. In this method, stress the reinforcing tendons initially, then place and cure the concrete and release the stress from the anchorages to the concrete after developing specified concrete strength.

Design shall be in accordance to the AASHTO LRFD Bridge Design Specifications, Sixth Edition 2012 and applicable interim specifications. The design life of the precast concrete wall panels and all panel components shall be 75 years.

### B Materials

#### B.1 General

Furnish materials conforming to the following:

| | |
|---|---|
| Masonry Anchors | standard spec 502 |
| Coated High Strength Bar Steel Reinforcement | standard spec 505 |
| Pretensioning Reinforcement | standard spec 503 |
| Welded Steel Wire Fabric for Concrete Reinforcement | standard spec 505 |
| Structural Steel and Miscellaneous Metals | standard spec 516 |
| Elastomeric Bearing Pads | standard spec 506 |

Galvanize, furnish stainless steel materials for all hardware incorporated into the finished structures.

#### B.2 Concrete

Furnish concrete as specified in standard spec 501.

Ensure concrete attains a minimum 28-day compressive strength of 5000 pounds per square inch. Base all tests on 6 inch by 12-inch cylinders, or 4 inch by 8-inch cylinders, provided the engineer develops and approves a correlation factor. Mold concrete cylinders in suitable steel or plastic molds. Cure concrete cylinders according to AASHTO T 23, except cure the cylinders with the member until release strength is obtained, then cure the cylinders according to AASHTO T 23.

The contractor shall make and test the cylinders and make available to the engineer all information relating to the making and testing of cylinders. Notify the engineer immediately if concrete cylinder compressive strengths are less than the required 28-day strength. Keep neatly documented records of all cylinder testing on the day of the test and make them available to the engineer. Provide copies of the tests to the engineer by contract completion.

Furnish prestressed concrete panels cast from air entrained concrete. Use type I, IS, I(SM), IP, II, or III cement. The contractor may replace up to 30 percent of type I, II, or III portland cement with an equal weight of fly ash conforming to standard spec 501.2.6 or slag conforming to standard spec 501.2.7. Use only one source and replacement rate for work under a single bid item. Use a department-approved air entraining admixture conforming to standard spec 501.2.2 for air entrained concrete. Use only size No. 1 coarse aggregate conforming to standard spec 501.2.5.4.

The contractor shall determine proportions for the mix within the following limitations:

| | |
|---|---|
| Water cement ratio | not greater than 0.42 |
| Cement content, pounds per cubic yard of concrete | 610-800 |
| Air content of concrete, percent maximum | 3.5-6.0 |

If the mix does not contain a high range water reducer admixture, use a department-approved set retarding admixture as specified in standard spec 501.2.3.2 at the recommended rate if the ambient air temperature is 70 degrees F (21 degrees C) or higher. The contractor may use it if the ambient air temperature is less than 70 degrees F (21 degrees C).

The contractor shall not add more admixtures or water after mixing is complete.

Use admixtures that do not contain chlorides.

Use admixtures that are compatible with all ingredients of the concrete mixture.

**B.3 Pretensioning Reinforcement**
Use high tensile strength, 7-wire strands conforming to ASTM A 416, grade 270.

**B.4 Plant Certification**
Obtain all precast concrete wall panels from fabrication plants that comply with the department's plant certification program for prestress concrete, unless the engineer agrees to accept these items according to the alternate procedures set forth in the department's plant certification program.

**B.5 Lifting Devices**
The type, number and locations of lifting devices and the method of handling the architectural precast panels is determined by the fabricator and approved by the engineer. Do not locate lifting devices in the surface of the panel facing toward the road.

**B.6 Accessories and Inserts**

Materials:

Shims: High-density plastic or galvanized steel, 1/8-inch thick, smooth both sides

Carbon steel plate: ASTM A 283

Welded headed studs: AWS D1.1 – Type B

Bolts, nuts, rods, washers: standard spec 506.2

Joint Material: Closed cell 100% virgin chloroprene (neoprene) filler meeting Division II section 18 of the AASHTO Specifications for Highway Bridges.

Inserts: Galvanized with minimum 12 Gage steel conforming to ASTM A1011 SS GR 33 or ASTM A653 GR 33 A. Inserts anchors to have 1 1/2-inch minimum cover.

Zinc coated fabrications: Conform to ASTM 385 for fabricating zinc coated work.

**C Construction**

**C.1 Design Requirements**

Design panels and components to withstand initial handling, transportation, and erection stress limits; dead loads; wind load of 40 pounds per square foot; thermal stresses; and other loads specified. In addition to the above loads also design inserts and connection assembles for the loads indicated on the plans and a horizontal force equal to at least 20% of the dead weight of the panel.

Provide a minimum prestress of 250 psi and minimum temperature and shrinkage reinforcement as required by AASHTO LRFD Bridge Design Specifications Article 5.10.8.

**C.2 Submittals**

Erection drawings shall conform to the contract plans and consist of member piece marks and completely dimensioned size and shape of each member; plans and/or elevations locating and defining all products furnished by manufacturer; sections and details showing connections, cast-in items and their relation to the structure; relationship to adjacent material including footings and copings; joints between members and structure; description of all loose, cast-in and field hardware; field installed anchor location drawings; erection sequences, when required to satisfy stability, and handling requirements; and all dead, live and other applicable loads used in the design.

Production drawings shall conform to the contract plans and consist of elevation view of each member; sections and details to indicate quantities and position of reinforcing steel, anchors, inserts, etc.; handling devices; dimensions and finishes; prestress for strand; concrete strengths; estimated cambers; and methods for storage and transportation.

Submit on request design calculations performed by a registered engineer licensed in the state of Wisconsin experienced in the design of precast prestressed architectural concrete.

Submit samples representative of finished exposed finished face showing typical range of color and texture prior to commencement of production. Samples to be approximately 12 inches x 12 inches and of appropriate thickness and representative of the proposed finished product.

When decorative relief patterns are show on the plans and required to be cast into the face of the panels, provide decorative relief pattern sample panels as required in paragraph C.9.2.

Design modifications necessary to meet performance criteria and field coordination. Variations in details or materials shall not adversely affect the appearance, durability, or strength of units. Maintain general design concept without altering profiles and alignment.

Submit on request reports on materials, compressive strength tests on concrete and water absorption tests on units.

The contractor shall submit to the engineer, for placing on file before commencing, one set of the submittals that the contractor has checked. In addition, provide two sets to the district office and one set to the bureau of structures for inspection purposes. Only then may fabrication commence without awaiting the results of any review the engineer may make. The engineer may refuse prints of submittals that are not clear and legible. If the engineer requests, submit one additional copy of submittals for review. After review, the contractor shall furnish as many copies of submittals as required.

The submittals become a part of the contract, provided any differences between sections on production drawings and sections the plans show are made only if the engineer approves and if the substitution is made at no additional expense to the department.

After initial submittal and review, make no deviation from the production drawings or changes to them without the engineer’s further review.

The engineer's review of submittals means only a review of the character and sufficiency of the details and does not relieve the contractor from responsibility in regard to errors or omissions on those drawings.

**C.3 Mock-up**

After standard samples are accepted for color and texture, fabricate one full size 10-feet wide x 10-feet high minimum panel meeting the design requirements, illustrating shape and patterns, lap joints, joint filler, lifting devices, inserts, and attachment points. Mockup to be standard of quality for precast panel work, when accepted by engineer. Keep mockup in plant for checking purposes.

**C.4 Stressing Procedure**
Stressing procedure shall be in accordance to standard spec 503.3.1. Ensure all the strands of a pretensioned member are free from kinks or twists before starting tensioning operations. Ensure no strand unwinds more than one turn after starting tensioning operations.

Perform transfer of prestress to concrete after the concrete develops the minimum required strength for transfer determined by the test cylinders.

**C.5 Placing and Fastening Steel**
Placing and fastening steel shall be in accordance to standard spec 503.3.1.1. Place all steel units in the position the plans show and hold firmly during concrete placing and setting as specified in standard spec 505.3.

Ensure that all prestressing steel is free of dirt, grease, wax, scale, rust, oil, or other foreign material that may prevent bonding between the steel and the concrete.

**C.6 Placing Concrete**
Handle and place the concrete as specified in standard spec 502.

**C.7 Tolerances**
Cast architectural prestressed precast concrete panels to plan dimensions within the following applicable tolerances:

Overall height of panel measured at the face exposed to view ..... ±1/8-inch per 10 ft.
Overall width of panel measured at the face exposed to view ..... ±1/8-inch per 10 ft.
Total thickness ..... ± 1/4-inch
Structural thickness ..... ± 1/4-inch
Variation from square or designated skew ..... ± 1/2-inch
Local smoothness, unconcealed surfaces ..... ± 1/4-inch per 10 ft.
Bowing ..... ± Length/360, to a maximum of 1-inch
Warp (from adjacent corner) ..... ± 1/16-inch per ft.
Location of inserts ..... ±1/2-inch
Tipping and flushness of inserts ..... ± 1/4-inch
Position of handling devices ..... ± 3-inch
Reinforcing steel:
Where position has structural implications or affects
concrete cover ..... ± 1/4-inch
Otherwise ..... ± 1/2-inch
Location of strand:
Perpendicular to panel ..... ± 1/4-inch
Parallel to panel ..... ±1-inch
Dimensions of architectural features and rustications ..... ±1/4-inch

**C.8 Curing**
Cure concrete in accordance to standard spec 503.2.2.

**C.9 Surface Finish**
Unless otherwise indicated on the plans, provide a rubbed surface finish on the exposed surfaces of prestressed concrete panels as specified in standard spec 502.3.7.3 before shipping from the plant. Exposed face to match approved mockup panels. Use rigid molds to maintain panels within specified tolerances conforming to shape, lines, and dimensions shown on the production drawings. Construct molds to withstand vibration method selected.

Coat bottom of panels with bitumastic after cutting strands flush. Do not coat top of panels.

**C.9.1 Decorative Relief Patterns**
When shown on the plans, provide prestressed precast panels with decorative relief patterns, decorative form liner treatments, or textured surface finishes as shown in the plans. The exposed surfaces must match approved sample panels. Electronic files of the decorative patterns are available from Wisconsin Department of Transportation, Jeff Bohen, P.E., 141 NW Barstow Street, Waukesha, Wisconsin 53187, (414) 750-2928.

**C.9.2 Decorative Relief Pattern Sample Panels**
When the plans call for prestress precast panels with decorative relief patterns, decorative form liner treatments or textured surface finishes, supply to the engineer a minimum of two non-production test panels with the decorative details as shown in the plans. Sample panels shall be at nominally 5 feet by 5 feet or larger in size to sufficiently demonstrate the finished appearance of the decorative relief pattern shown in the plans. The submitted test panels shall fit together to demonstrate the continuation of the decorative relief patterns, form liner treatments, and textured surface finishes across vertical panel joints. Obtain the engineer's acceptance of the decorative patterned sample panels, prior to production of the decorative relief patterned panels required for the contract. Only one set of accepted decorative sample panels for prestressed precast concrete wall panels is required per contract.

**C.10 Erection**
Erect panels without damage to shape or finish. Replace or repair damaged panels.

Place precast concrete wall panels so that their final position is vertical. Ensure that the vertical joint openings between panels are uniform and that decorative patterns between panels are aligned.

When panels require adjustment beyond design or tolerance criteria, discontinue affected work; advise engineer.

Verify structure, footings, anchors blocks, rods, couplers, clevises, and other anchor devices are ready to receive panels. Verify that wall panel footings are placed at the proper horizontal and vertical alignments and are ready to the receive wall panels. Place elastomeric pad and shims behind panels to ensure proper horizontal alignment. Set panels on elastomeric bearing pads and shims and install base angles at ends of panels. Shim vertical joints to get proper opening. Install and compress neoprene joint filler in the lap joints between panels. Fasten top of panels to deadman anchor block assembles at MSE walls, to top of drilled shafts at secant pile walls, and to top of concrete at existing walls, as shown on the plans.

Touch-up scratched or damaged galvanized surfaces.

**C.11 Erection Tolerances**

Plan location from wall reference line ..... ± 1/2-inch
Plan location from wall alignment ..... ± 1/2-inch
Top elevation from nominal top elevation ..... ± 1.4-inch
Support elevation from nominal elevation:
    Maximum low ..... 1/2-inch
    Maximum high ..... 1/4-inch
Plumb in any 10 ft. of panel height ..... ± 1/4-inch
Maximum offset of matching edges and decorative patterns ..... ± 1/4-inch
Maximum offset of matching faces ..... ± 1/4-inch
    Joint width (governs over joint taper) ..... ± 1/4-inch
Joint taper maximum ..... ± 3/8-inch
Joint taper over 10 ft. length ..... ± 1/4-inch
Differential bowing or camber as erected between
adjacent members of the same design ..... ± 1/4-inch

**C.12 Adjusting**

Adjust panels so joint dimensions are within tolerances.

**D Measurement**

The department will not measure Prestressed Precast Concrete Wall Panel. The department will use pay plan quantity according to the Pay Plan Quantity article. Any modifications to the contract quantity caused by corrections or revisions of the original contract plan, which have been approved by the engineer, will be measured by the square foot on a vertical plane between a line at the finished grade in front of the panel and a line indicating the top of wall including wall cap or coping as shown on the plans. Unless ordered by the engineer, panel area below or above these lines will not be measured for payment.

**E Payment**

The department will pay for plan quantities according to the Pay Plan Quantity article at the contract panel price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4790 | Prestressed Precast Concrete Wall Panel | SF |

Payment is full compensation for preparing the design drawings and calculations, production drawings, and coordination; for providing prestressed precast wall panels, including all concrete, grout, mortar, reinforcement steel, tie bars, bearing pads, shims, masonry anchors, filler, anchor plates, angles, slotted inserts and other embedded metal; for casting, curing and finishing concrete; for providing decorative relief patterns, decorative form liner treatments and textured surface finishes; providing sample panels; for jacking and prestressing; and for furnishing all handling, hauling and erecting. Parapets, railings, abutment bodies and other items above the wall panel cap or coping will be paid for separately. Deadmen anchor blocks, rods, couplers and clevises will be paid for separately. Construction of foundations and excavation will be paid for separately.

## 392. Structure Waterproofing Special, Item SPV.0165.4795.

### A Description

Work under this item consists of providing and installing exterior waterproofing on the top and sides of buried structures covered by a free draining aggregate layer. Perform work in accordance to pertinent parts of the standard specifications, the plans, and these special provisions.

### B Materials

### B.1 Waterproofing Membrane

### B.1.1 General

Structure Waterproofing Special to be a multi-layered, fabric reinforced, hot applied, rubberized asphaltic waterproofing membrane. Structure Waterproofing Special shall be:

1. Tremco Tremproof 6100
2. Barrett ram Tough 250
3. Hydrotech 6125

Or approved equal.

All waterproofing membrane components and products including concrete primer, fabric reinforcement and protection courses to be the products of one manufacturer specifically intended to work together to form a watertight waterproofing membrane system.

All waterproofing membrane systems shall include and be finished with a suitable protection course, consisting of asphaltic backer board or equivalent designed to protect the reinforced membrane from abrasion, tears, punctures or other damage due to subsequent placement of backfilling materials over the top of the waterproofing membrane. The protection course shall be placed over the membrane and under the drainage layer.

At least 10 days prior to the application of the membrane, submit waterproofing membrane product data to include material safety data sheets and application instructions to the engineer.

**B.1.2 Manufacturer Certification**
The manufacturer of the selected waterproofing membrane system shall provide written certification that the selected waterproofing membrane system is suitable for the intended purpose and application to waterproof the top and sides as shown in the plans for the buried structures included in the contract.

**B.1.3 On-Site Manufacturer Representative**
A representative of the selected waterproofing membrane manufacturer shall be on-site for the first two days of the initial application of the waterproofing membrane to provide training and direction to installers and on-site inspection personnel on the proper application and installation of the waterproofing membrane system.

**B.2 Drainage Layer**
Furnish aggregate conforming to standard spec 310.

**B.3 Geotextile Fabric**
Furnish geotextile fabric conforming to Type DF Schedule B in standard spec 645.2.4.

**C Construction**
**C.1 Waterproofing Membrane**
Allow a minimum of 14-days after concrete placement of the top slab prior to application of water proofing membrane, or longer if required by the manufacturer of the selected waterproofing membrane to be installed. Concrete surface shall be clean and free of dust, foreign and loose matter. Concrete shall be dry and within acceptable temperature range for application of waterproofing membrane as specified by waterproofing membrane manufacturer.

Prepare surface for application of waterproofing membrane and apply primer bonding product as required by the selected waterproofing manufacturer.

Heat and apply rubberized asphaltic waterproofing and fabric reinforcing in accordance to selected waterproofing membrane manufacturer's written installation instructions. At concrete headwalls, secure the up turned edges of the membrane with a termination bar as specified by the manufacturer. The waterproofing membrane shall be finished with a protection course specified by the manufacturer.

Cure membrane as required by the selected waterproofing membrane manufacturer. Do not operate vehicles, machinery or equipment on the completed waterproofing membrane prior to placement of the drainage layer and fill on membrane. As much as practically possible, avoid walking or performing work operations on the uncovered membrane and take necessary precautions to protect the membrane from damage for unavoidable operations.

**C.2 Drainage Layer**
Cover fully cured waterproofing membrane with free draining aggregate layer as shown in the plans. Use suitable procedures and equipment and exercise care in delivery and placement of the aggregate drainage layer so as not to damage or compromise the

waterproofing membrane. The aggregate drainage layer shall be continuous and connected hydraulically to the perforated drain tiles on each side of the top slab to create a path for surface water seepage to drain off the top of buried structures.

Cover the aggregate drainage layer with geotextile fabric in accordance to standard spec 645.3.4 prior to placement of fill on top of the aggregate layer.

**D Measurement**
The department will measure Structure Waterproofing Special by the square foot, acceptably completed.

**E Payment**
The department will pay for the measured quantity at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.4795 | Structure Waterproofing Special | SF |

Payment is full compensation for furnishing and installing the waterproofing membrane including all primer and bonding products, termination bars, reinforcement mats and protection courses; for furnishing and placement of the free draining aggregate layer on the membrane, and for furnishing and placement of geotextile fabric over the drainage layer.

## 393. Shaft Excavation Support System, Item SPV.0165.8095.

**A Description**
This special provision includes the requirements to design/redesign, furnish and install, and remove when applicable, the excavation support system for working shafts at proposed manholes Z2431, Z2623 and Z2683. The contractor shall take ownership of previously excavated and temporarily backfilled shaft at manhole Z2683 under previous contract 1060-33-80. The contractor shall design shaft excavation support systems for shafts Z2431 and Z2623, and assess and redesign (if necessary) the in-place system at shaft Z2683 and construct each shaft excavation support system as recommended in the Geotechnical Baseline Report and in accordance to requirements in this special provision.

**A.1 Qualifications of the Contractor**
The contractor's excavation support system design engineer shall be a professional civil engineer registered in the State of Wisconsin and shall have at least ten years of experience in design and construction of excavation support systems similar to the contractor's proposed system.

**A.2 Design Criteria**
All ground support system elements including shoring and bracing of shaft excavations shall conform to the requirements of Subpart P, Excavations (1926 of 29 CFR) of the Occupational Safety and Health Administration (OSHA).

The design shall provide bottom stability and system stiffness sufficient to meet the contract requirements for control of water and for protection of adjacent work and property. The design shall be compatible with the contractor's selected methods of excavation and control of water. The design shall provide for placement of excavation support systems and removal of the excavation support systems where required and feasible. The design shall provide for construction of the permanent work, and all other construction operations and requirements.

Design shaft excavation support systems and working slabs to withstand earth pressures, groundwater pressures, bottom heave, equipment loads, thrust block loads from pipe jacking, loads from making a portal for tunneling, applicable traffic and construction loads, and other surcharge loads to allow the safe construction of the tunnel without movement or settlement of the ground, and to prevent damage to or movement of adjacent structures, streets, and utilities. Design excavation support systems to be compatible with the geologic conditions described in the Geotechnical Baseline Report and in accordance to AISC and ACI code provisions, as applicable.

Select shaft geometry, size, and type of excavation support system per plans and Geotechnical Baseline Report.

Design each member or support element to support the maximum loads that can occur during construction with appropriate safety factors. The maximum combination of loads or stresses shall be no larger than 67% of the yield strength of the structural members.

Design the support system to minimize horizontal and vertical movements, as per limits delineated in the special provisions, article Geotechnical Instrumentation, and to protect adjacent utilities from damage. The type and stiffness of each ground support system and the methods of ground support installation shall be designed and constructed in order to meet the ground movement limits and adjacent property protection requirements as specified in the special provisions, article Geotechnical Instrumentation.

Design support system to maintain the stability of the excavation against sliding or bottom heave. Provide a minimum factor of safety of 1.5 against sliding. Provide a minimum factor of safety of 1.5 against bottom heave due to adjacent surcharge pressures and hydrostatic uplift pressures or upward seepage pressures.

Employ combinations of walers, struts, tie-back anchors and beams for bracing and lateral support as required to support excavation faces and control groundwater and prevent loss of ground with soldier piles and lagging, liner plate, or other methods of ground support. Provide struts with intermediate vertical and horizontal supports to prevent buckling. Trench shields and/or speed shores are not allowed for shaft construction.

Design a gravel pad or concrete working slab equipped with a sump to pump out construction water and storm water for shaft excavation bottoms to provide stable support for construction operations.

Design for shaft sizes indicated on the drawings.

Design consideration for hydrostatic pressure shall be coordinated with the contractor's water control plan.

The support system shall be designed to ensure that no earth or other loading will be placed on the new structures prior to substantial completion of them and until design strength has been reached. The contractor shall be solely and completely responsible for any damage or loss due to premature loading of the new structures.

The design shall specify the following items as a minimum: repairs or replacement of existing excavation support elements of shaft at manhole Z2683; the quality of materials to be used for excavation support systems; constraints on maximum excavation limits relative to support installation steps; tolerances for size and position of ground support elements; required preloading of excavation support elements; restrictions on surcharge loads and other loads that may act on the excavation support system such as jacking forces and grouting, and groundwater pressures; ground support system and adjacent ground movement limits; provisions for subgrade stability and protection; and constraints on removal of support system elements as the permanent work is constructed and backfilling is completed.

**B Materials**

Materials used in construction of the shaft excavation support systems shall meet these requirements:

- All timber and structural steel used for the supporting systems, whether new or used, shall be sound and free from defects that may impair their strength.

- Structural Steel: Conform to ASTM A572 Grade 50 unless approved otherwise.

- Timber: All timber shall be structural grade with a minimum allowable flexural strength of 1,100 psi.

- Steel Segments (Liner Plates): Segments shall be accurately bent to the approved shape for the proper radius of tunnel section. Rib segments shall fit closely and have bolted butt-plate joint connections. Each plate of every 4th ring fitted with a minimum 1-1/2-inch diameter grout pipe. All steel appurtenances required for the installation of the segments such as bolts, gaskets, shims, spacers, and other necessary accessories shall be provided with the segments. Segments (liner plates), channels, plates, rods, and accessories shall be structural steel conforming to ASTM A36 or ASTM A572. Bolts shall conform to ASTM A325 or A449. Nuts shall conform to ASTM A307, Grade A.

- Contact Grout: Conform to special provisions, article Contact Grouting.

- Anchor Tendons: Conform to ASTM A615 for Grade 60 or 75 or ASTM A722 for Grade 150

- Anchor Grout: The grout shall be a pumpable neat mixture of cement and water and shall be stable (bleed less than 2 percent), fluid, and provide a minimum 28-day compressive strength as per contractor's design. Grout material shall conform to the requirements of standard spec 501.2. Use Type I Portland cement.

## C Construction

### C.1 Submittals

#### C.1.1 General

Prepare and submit qualifications, shop drawings and work plan at the preconstruction meeting or at least 14 calendar days prior to beginning shaft construction, whichever date is earlier. The engineer will accept the submittal as submitted or return the submittal with requested revisions. Do not start any work until the engineer provides acceptance of qualifications, shop drawings and work plan. Acceptance of the submittals does not relieve the contractor of responsibility for successful completion of the shafts.

#### C.1.2 Subsurface Conditions

The contractor review the Geotechnical Baseline Report – South Leg Storm Sewer – Manholes Z2822 to Z2431 (referred as "Geotechnical Baseline Report" herein) for the subsurface conditions.

#### C.1.3 Submittals for Approval

**Excavation Support System Design Engineer Qualifications:** Submit written documentation (including evidence of professional registration in the State of Wisconsin) as supporting evidence of the qualifications of the contractor's engineer.

**Shop Drawings and Work Plan:** Submit plans and shop drawings for shaft excavations, excavation support systems, and other related information. Drawings and calculations shall be prepared and sealed by the contractor's engineer. As a minimum, the submittal shall contain the following information:

a. Construction method to be used for the installation of each system, including sequence of installation and equipment description.
b. Detailed construction sequence for shafts at manholes Z2431, Z2623, and Z2683, at a minimum, addressing penetration of the existing storm sewer pipes, maintenance of existing pipe flow throughout construction course, construction of proposed pipes and manholes, construction of tunnel, replacement of existing excavation support elements (if necessary) of shaft at Z2683.
c. Shop drawings and design calculations showing assumed loading conditions, estimated ground movements, system component design, arrangement of supports and construction sequence for proposed support system(s). Show the elevation of struts, braces, or other supports as related to the depth of excavation at intermediate stages of construction. Provide details of bottom slab, drains, and sump construction. Indicate sizes, shapes, and material specifications for all support elements including lagging, if used. Calculations

shall include estimates of likely deflections or deformations of the support system and maximum tolerable values. Calculations shall also show the shaft wall is able to sustain the maximum jacking forces transferred from the thrust block during pipe jacking.

d. The design and submittal of soldier piles and laggings for shaft excavation support shall, as a minimum, address: interference with utilities; drilled hole advancement, including drilling equipment type, expected hole diameters and methods of maintaining hole stability; structural design of soldier piles, including size, weight, steel grade, depth, and backfill of hole; method of shaft excavating; method of removing boulder obstructions; method of lagging installation and overcut backfilling or contact grouting; and design and installation of any internal bracing or tie-backs.
e. The design and submittal of steel ribs and laggings/ liner plates for shaft support shall as a minimum, address : interference with utilities; structural design of steel ribs and laggings/ liner plates, including size, weight, steel grade, depth; liner plate details, including geometry, joints, connectors (bolts and dowels), compression packings, gaskets, inserts, and accessories; method of assembly; method of shaft excavating; method of removing boulder obstructions; method of lagging/liner plate installation and overcut backfilling or contact grouting; design.
f. A site plan for each shaft indicating utilities, use of access roads, site grading and site development details for the excavation and all work areas, and the proposed limits of disturbance surrounding each excavation.
g. Portal plans indicating support installed to maintain ground support system integrity and stability of the excavation when commencing tunneling and when holing through. Provide details of the portal bracing, seal and ground improvement (if used) needed for face stability and tunnel launching.
h. A work plan for previously excavated shaft under previous contract 1060-33-80 at manhole Z2683 showing tasks, maintenances, and repairs or replacement to damaged excavation support elements, and safety monitoring.

### C.1.4 Information Submittals

**Contractor's Engineer Certification:** Submit to the engineer, no later than the 5th day of each month, a signed and sealed certification (letter, memorandum, or report) by the contractor's engineer that, based on his/her observations, the work completed during the previous month pertaining to design was installed and is performing substantially in accordance to the design concepts prepared by him/her. The contractor's engineer shall also report any significant deviations from the submitted design concepts, any performance concerns observed and actions recommended remediating these items. The contractor's engineer certifications shall be made monthly during a period commencing with the start of excavation and ground support system installation, continuing during portal excavation and pipe jacking operations and ending when the ground support system has been abandoned and backfilled or removed and backfilled.

**As-built Plans:** Submit as-builts of abandoned excavation support systems.

### C.1.5 Acceptance

The engineer will evaluate the Submittals for Approval with the requirements of this special provision. Within 14 calendar days after receipt of the Submittals for Approval, the engineer will notify the contractor of the acceptance of the submittal, or if additional information and/or changes are required. Any unacceptable part of the Submittals for Approval will require resubmission. The contractor must resubmit the Submittals for Approval for evaluation and review with the necessary changes or additional information provided. The engineer will provide a written notice of acceptance or rejection of contractor's resubmitted Submittals for Approval within 14 calendar days after its receipt.

After the engineer's acceptance of Submittals for Approval, no changes to the Submittals for Approval can be made without written consent of the engineer.

All Information Submittals should be submitted to the engineer. The engineer can reject the submittals which do not adequate detail, as required herein. The contractor shall resubmit the rejected submittals within 7 days upon the receipt of the engineer's rejection notice.

### C.2 General Shaft Construction Requirements

The contractor shall review the plans and special provisions of this project to coordinate with utility and abandonment relocation work adjacent to the shaft prior to shaft construction. The contractor shall also provide support and maintain live utilities which penetrate through shaft excavation areas and remove man-made objects and abandoned utilities within the shaft excavation, as discussed in the Geotechnical Baseline Report and as shown in the plans. The effort, material, and labor required to remove, support or avoid the utilities and underground structures during shaft construction shall be deemed as incidental work to shaft construction and shall be at no additional cost to the department.

Excavation support systems for shafts shall consist of drilled-in soldier piles and laggings and steel ribs and laggings/liner plates at shaft locations recommended in the Geotechnical Baseline Report.

The contractor shall design and install shaft ground support systems in accordance to the contract documents and approved submittals. The contractor shall furnish materials for installing, monitoring, maintaining, and removing ground support systems. The contractor's engineer shall maintain involvement and responsibility from design through installation, performance and abandonment or removal of ground support systems.

The contractor shall implement groundwater control measures, as required in the special provisions, article Control of Water. Installation of excavation support systems shall not be done without groundwater control measures.

Whenever necessary to prevent caving during excavation to protect adjacent structures, property, workmen, and the public, adequately support and brace excavations. All shoring and bracing of excavations shall conform to the safety requirements of the Federal, State,

or local public agency having jurisdiction over such matters. The most stringent of these requirements shall apply.

The contractor shall install support systems to permit the safe execution of the work, and to ensure that no ground loading or other loading will be placed on the new work prior to completion and until design strength of the structure being constructed has been reached. During periods of shutdown, fully support the walls of excavations to prevent lost ground. The contractor shall install excavation support systems to minimize loss of soil into the excavations; minimize ground movements outside of the excavations; maintain stability of the excavations; preserve the in-situ strength of surrounding soils; to limit construction-induced vibration. Control vibrations from boulder splitting or installation and removal of excavation support elements to prevent damage to the work and adjacent property. Ground movement and vibration shall be monitored as per special provisions, article Geotechnical Instrumentation.

Skin-tight contact between the ground and the soldier pile and lagging system or the steel ribs and lagging/liner plate system is required and is to be maintained by the contractor's selected means, such as blocking, cribbing, wedging, grouting, or other means compatible with the design of contractor's engineer. For overcut voids over 1/2 inch wide, the contractor shall promptly complete contact grouting as specified in the special provisions, article Contact Grouting. Contact grouting shall be performed to control ground movement into the excavation, and to provide firm and uniform contact between the support system and the ground. Grout holes shall be located as necessary to accomplish the work.

**C.4 Drilled-in Soldier Pile and Lagging Wall**

The contractor shall design soldier pile and lagging wall to allow the penetration of the existing storm sewer pipe. The contractor shall install soldier piles through pre-drilled holes and fill in with concrete. Driven soldier piles are prohibited.

The soldier piles shall be installed within 2 inches of the planned location. The contractor shall replace soldier piles not located within tolerance or damaged due to any cause at no additional cost to the department.

Based on the design of contractor's engineer, soldier piles shall be secured against horizontal or vertical movements or distortion. Laggings shall be assembled true to the lines and grades presented on the approved shop drawings.

Install laggings in conformance with the manufacture's recommendations and in a manner that will not deform or overstress the soldier piles. The contractor shall prevent laggings from deflecting more than contractor's design deflection.

Prior to allowing excavation to stand overnight, advance the laggings to 1 feet above the excavation line and contact grout.

**C.5 Steel Ribs and Laggings/Liner Plates**

The contractor shall design and install steel ribs and laggings/liner plates to allow the penetration of the existing storm sewer pipe. The contractor shall install steel ribs and laggings/liner plates as per approved shop drawings and in conformance with the manufacturer's recommendations.

The contractor shall be prepared to handle wet sand seams and lenses during installation of steel ribs and laggings. The contractor shall avoid ground loss from unstable wet sand seams and lenses, if encountered.

Unsupported excavation is prohibited overnight or for extended periods. The steel ribs and lagging/liner plate system shall be advanced to the bottom of the excavation prior to the end of each work day.

**C.6 Bracing System**

The contractor shall install bracing system consisting of walers, struts or tie-back anchors in the sequence as specified by the contractor's engineer and as detailed in the approved submittal.

Install steel supports true to the line and grades as per approved shop drawings. The contractor shall install steel plates to ensure firm contact between walers (if used) and the soldier piles.

If tie-back anchors are used, the requirements herein shall be followed. The tie-back anchors shall be positioned plus or minus 6 inches from the theoretical elevation shown in the shop drawings. At the point of entry, the anchor shall be installed within plus or minus 3 degrees of the declination from horizontal shown in the shop drawings. Minimum grout cover for tendons shall be ½ inch. Tie-back anchors which do not satisfy the specified tolerances will be replaced at no additional cost to the department.

Anchor holes shall be drilled at the specified locations, angles, lengths and minimum diameters shown on the shop drawings. Over-drilling of holes shall be utilized only if described in approved work plan. The contractor shall check orientation of anchor hole prior to and during drilling. Drilling mud or foam shall not impact ground anchor load transfer.

Immediately prior to tendon installation, flush hole with water to provide saturated soil and concrete surfaces, remove standing water in bottom of hole, and sound hole for compliance with required length. Tendons shall be free of dirt, loose rust, grease, or other deleterious substances and placed in accordance to approved shop drawings. The contractor shall provide rigid and adequate support during placement of grout. The tendon bars shall be continuous, without splices or welds.

The contractor shall place a separate bondbreaker if a corrugated sheath is used or if recommended by the manufacturer. Pump grout to bottom of hole through clean and leak-free grout pipes. If grout inside the sheath is not pre-manufactured, the contractor shall

grout area outside and inside the sheath simultaneously and maintain grout at the same level both inside and outside of the sheath. Grout volume shall be measured and compared to theoretical volume to avoid overfilling hole. Continuously monitor the location of the grout surface using a measuring rod extending through the holes in the tendon base plate to verify that grout is at correct distance from the excavation face. Maintain the tip of the grout pipe below grout surface at all times to avoid entrapping air. After grout operation is complete, allow tendon to remain undisturbed until grout has cured for the time required to reach minimum specified strength, as determined by ASTM C942. If ungrouted length is longer or shorter than the specified length by 1 foot or more, perform following remedial action:

a. Remove tendon, flush hole, and redrill if necessary or remove grout to the required elevation.
b. Replace tendon with new tendon if damaged.

Do not tension tendon before grout has cured for minimum specified time and has attained required strength. Tension tendon by means of equipment recommended and furnished by tendon manufacturer.

**C.7 Removal of Excavation Support Systems**

The contractor shall remove all elements of excavation support systems extending between the ground surface and 6 feet below the existing or the proposed ground surface, whichever is lower. Repair any settlement or damage to the work or to adjacent property as a result of removing excavation support systems. Excavation support systems that cannot be safely removed or removed without causing settlement or damage to the work or adjacent property shall be left in place, at no additional cost to the department.

If backfill material is loosened to an extent that it settles more than one inch as a result of attempts to remove ground support members, the contractor shall be responsible for remedial measures to re-compact or consolidate the loosened backfill. The contractor's engineer shall be responsible for determining if ground support system can be safely removed. Excavation support system elements that are left in place shall be at the contractor's expense. Restoration of any damage and the cost of remediating disturbed backfill or adjacent property damage caused by removal of ground support systems shall be at the contractor's expense.

**C.8 Shaft Backfilling**

Backfill shafts in accordance to standard spec 206.3.13. Backfill around the pipe inside the shaft shall be in accordance to standard specs 209.2, 520.3.2 and 520.3.4.

**D Measurement**

The department will measure Shaft Excavation Support System by the square foot, acceptably completed. Additional excavation beyond the limits of the plan dimensions will not be measured for payment unless authorized and agreed to in advance of placement by the department.

**E Payment**

The department will pay for measured quantities at the contract unit price under the following bid items:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0165.8095 | Shaft Excavation Support System | SF |

Payment for Shaft Excavation Support System is full compensation for furnishing, installing, and removing excavation support systems for working shafts at Z2431 and Z2623, maintaining, replacing or installing existing/new excavation support elements at previously excavated and temporarily backfilled shaft Z2683, including but not limited to: excavation; all elements of excavation support systems; removing encountered boulders and known or unknown abandoned man-made objects (regardless of quantities); ground improvements; ancillary work for tunnel portals; providing and placing backfill; shaft base material compaction and work slab; removal of excavation support systems; disposing of surplus material; and for equipment mobilization/demobilization.

## 394. Joint Sealing, Item SPV.0180.0101.

**A General**

This special provision describes the minimum requirements for preparing the pavement joint or crack, and furnishing and installing the sealant. Seal all expansion, hand-formed, and sawed joints in the pavement. Also, seal all bond or construction joints.

**B Materials**

Joint sealer shall comply with the requirements of ASTM Designation D3405. Joint sealer shall be composed of a mixture of materials that will form a resilient and adhesive compound capable of effectively sealing joints in concrete against the infiltration of moisture and foreign material throughout repeated cycles of expansion and contraction with temperature changes, and of a mixture that will not flow from the joints or be picked up by vehicle tires at summer temperatures. The material must be capable of being brought to a uniform pouring consistency suitable for completely filling the joints without inclusion of large air holes or discontinuities.

The joint sealer shall be elastic type but poured; melt by using indirect heat in suitable equipment provided with positive temperature control and mechanical agitation. Do not damage the material when heating it to the temperature required for satisfactory pouring.

When applying the joint sealer, the atmospheric and concrete temperature will be above 40°F.

**C Construction**

**C.1 Preparation of Pavement Joint or Crack**

Clean the pavement joint or crack of all foreign material prior to the installation of the joint sealer. Completely remove the slurry resulting from the sawing operations from the joint by blowing it clean with compressed air (minimum air pressure – 80 pounds per square inch). Joints shall be dry prior to applying joint sealer.

**D Measurement**
The department will measure Joint Sealing by the area of square yards of pavement sealed, acceptably completed.

**E Payment**
The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0180.0101 | Joint Sealing | SY |

Payment is full compensation for the cost of and placement of the sealant; for cleaning the joint or crack; for removing slurry and blowing the joint clean.

## 395. Concrete Pavement Repair Special, Item SPV.0180.0102.

**A Description**
This special provision describes removing existing shoulder pavement by saw cutting, excavating, grading, adjusting existing storm sewer covers, compacting, and replacing shoulder pavement with special high early strength (SHES) concrete and finishing necessary to accommodate Concrete Pavement Repair Special as shown on the plans and conforming to standard spec 416 as modified in this special provision.

Adjusting existing storm sewer covers consists of; excavating unsuitable material; filling voids with backfill material, compacting, removing, handling, storing and resetting existing storm sewer structure covers.

**B (Vacant)**

**C Construction**
Backfill all subgrade voids beneath the repair area using compacted Base Aggregate Dense. Obtain approval of the engineer before using Backfill Controlled Low Strength to backfill voids that cannot be compacted with standard equipment.

Adjust and reset all drainage covers within the repair area prior to the placement of the concrete pavement.

**D Measurement**
The department will measure Concrete Pavement Repair Special by the square yard, acceptably completed.

**E Payment**
The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0180.0102 | Concrete Pavement Repair Special | SY |

Payment for the Concrete Pavement Repair Special item is full compensation for furnishing, hauling, preparing, placing, curing, and protecting all materials; for sawing existing pavement for removal; for removing and disposing of existing pavements and excavated materials; for sawing joints; for preparing the foundation; for tie bars and dowel bars provided and placed in the repair area; for removing, handling, storing, adjusting, and reinstalling storm sewer covers; and for testing concrete cylinders. Replace all covers that are damaged by the contractor's operations at no expense to the department. The department will pay for individual repairs the width of the existing concrete lane or shoulder and less than 300 feet long as Concrete Pavement Repair Special.

The department will pay for backfilling with Base Aggregate Dense and Backfill Controlled Low Strength separately under the respective bid items.
SEF Rev. 14_1015

## 396. Concrete Pavement 12-Inch Special, Item SPV.0180.0105.

**A Description**
This special provision describes specialized material and construction requirements to utilize on the Zoo Interchange mainline pavement and shoulders.

Conform to standard specs 415 and 501 as modified in this special provision, and in accordance to special provision QMP Concrete Pavement Special Requirements.

Concrete pavement mixes from standard spec 501 may not be used. Provide an independent contractor developed mix design.

**B Materials**
**B.1 Concrete**
*Add the following to standard spec 415.2.1:*

Furnish a cementitious material that does not contain more than 30% slag. Ensure that the combination of fly ash and slag does not exceed 30% of the total cementitious material.

**B.2 Reinforcement**
*Replace standard spec 415.2.2 with the following:*

Furnish steel reinforcement conforming to standard spec 505. Furnish tie bars as the plans show and according to standard spec 505.2.6.

Furnish dowel bars conforming to standard spec 505.2.6 except, for transverse joints in mainline concrete pavement, use non-corrosive high performance dowel bars. Use only one type of high performance bar for work under the contact. The following may be used:

1. Bars with 316L stainless steel cladding meeting ASTM A276 chemical requirements. Ensure that the bars have a smooth finished surface cladding 0.060 inches thick or thicker over ASTM A615 grade 60 or higher carbon steel.

2. Bars with 316L stainless steel tubes meeting ASTM A276 chemical requirements. Ensure that the tubes have a smooth finished surface, a wall thickness of 0.060 inches or more, and are press-filled with ASTM A615 grade 60 or higher carbon steel. Use an adhesive or epoxy between the tube and the carbon steel to fill any voids.

3. Solid 316L stainless steel bars conforming to ASTM A955 grade 60 or higher.

4. Bars with a rolled UNS Z41121 zinc alloy cladding conforming to ASTM B6. Ensure that the bars have a smooth finished surface cladding 0.040 inches thick or thicker over ASTM A615 grade 60 or higher carbon steel.

5. Bars with a fully bonded longitudinal glass fiber reinforced polymer (GFRP) corrosion shield conforming to the GFRP materials requirements of AASHTO LRFD Bridge Design Guide Specifications for GFRP Reinforced Concrete Bridge Decks and Traffic Railings. Ensure that the bars have a smooth finished GFRP surface coating 0.125 inches thick or thicker over ASTM A615 grade 60 or higher carbon steel.

6. Use bars with a minimum outside diameter of 1.5-inches and a length of 18-inches for all non-corrosive high performance dowel bars.

**B.3 Concrete Curing Compounds**
*Replace standard spec 415.2.4 with the following:*

Furnish poly-alpha-methylstyrene membrane curing compound conforming to ASTM C 309 as modified below.

| | |
|---|---|
| Total Solids (% by weight of compound) | 42 Minimum |
| % Reflectance in 72 hours (ASTM E1347) | 65 Minimum |
| Loss of Water, kg/m2 in 24 hours (ASTM C156) | 0.15 Maximum |
| Loss of Water, kg/m2 in 72 hours (ASTM C156) | 0.40 Maximum |
| VOC content (g/L) | 350 Maximum |
| Infrared Spectrum, Vehicle | 100% alpha methylstyrene |

**B.4 Coarse Aggregates**
**B.4.1 General**
*Replace standard spec 501.2.5.4.1 with the following:*

Use clean, hard, durable crushed limestone with 100% fractured surfaces and free of an excess of thin or elongated pieces, frozen lumps, vegetation, deleterious substances or adherent coatings considered injurious.

Use virgin aggregates only.

**B.5 Deleterious Substances**

*Replace standard spec 501.2.5.4.2(1) with the following:*

The amount of deleterious substances shall not exceed the following percentages:

| DELETERIOUS SUBSTANCE | PERCENT BY WEIGHT |
|---|---|
| Shale | 1.0 |
| Coal | 1.0 |
| Clay lumps | 0.3 |
| Soft fragments | 3.0 |
| Any combination of above | 3.0 |
| Thin or elongated pieces based on a 3:1 ratio | 15.0 |
| Materials passing the No. 200 (75 µm) sieve | 1.5 |
| Chert[1] | 3.0 |

[1] Material classified lithologically as chert and having a bulk specific gravity (saturated surface-dry basis) of less than 2.45. Determine the percentage of chert by dividing the weight of chert in the sample retained on a 3/8-inch (9.5 mm) sieve by the weight of the total sample.

**B.6 Physical Properties**

*Replace standard specs 501.2.5.4.3 (1) and (2) with the following:*

The percent wear shall not exceed 30%.

The department will ensure that soundness testing conforms to AASHTO T 104, using five cycles in sodium sulfate solution on aggregate retained on the No. 4 (4.75 mm) sieve. The weighted loss shall not exceed 6 percent.

The department will ensure that freeze-thaw soundness testing confirms to AASHTO T 103. The weighted freeze-thaw average loss shall not exceed 15 percent.

**B.7 QMP Testing Requirement Modification**

**B.7.1 Concrete Pavement Mixes**

Testing referred to in this section pertains to concrete mix design approval and trial batch proving.

In addition to B.5.2.3.2 paragraph one of the QMP Concrete Pavement Special Requirements provision of this contract, use at least five pairs of beams and five pairs of cylinders to demonstrate the flexural strength of a mix design. Demonstrate that the 28-day flexural strength of the proposed mix will equal or exceed 650 psi. Ensure that the average flexural strength of any one pair of beams is not less than 490 psi.

**B.7.2 Contractor Testing**

**B.7.2.1 General**

Perform all quality control tests applicable to this special provision and as described in the quality control plan. Use the test methods identified below to perform the required tests:

Flexural strength……AASHTO T 97

The department may periodically observe contractor sampling and testing, and direct additional contractor sampling and testing for department evaluation. Ensure that all test results are available for the engineer's review at any time during normal working hours.

**B.7.3 Flexural Strength**

**B.7.3.1 Sampling**

Cast specimens for testing flexural strength in each lot tested under the QMP Concrete Pavement Special Requirements provision of this contract. Cast compressive strength and flexural strength test specimens from the same concrete mix sample.

Sample according to AASHTO T 141. Cast and cure the specimens according to AASHTO T 23.

Cast one set of three standard 6 x 6 inch beams to test the lot flexural strength.

**B.7.3.2 Testing**

Have a technician certified for flexural strength through the department's HTCP, in a department-qualified laboratory, perform flexural strength testing and document the results.

Determine the 28-day strength in psi of each specimen according to the specified AASHTO standards for each required test. Test each specimen to failure. Use a machine that automatically records the date, time, rate of loading, and maximum load of each specimen. Include a printout of this information with the strength documentation for each specimen tested.

**C Construction**

**C.1 Jointing**

**C.1.1 General**

*Add the following to standard spec 415.3.7.1:*

Treat sawed surfaces of transverse and longitudinal joints with a silane joint sealant found on the departments approved products list for Concrete Protective Surface Treatments. Prepare surface by pressure washing all saw slurry from sawed joints and allow to dry thoroughly prior to application of silane sealer. Apply the product directly to the interior of the sawed joint. Do not use the broadcast spray method of application.

**C.2 Surface Finishing**
*Replace standard spec 415.3.8.3.1 with the following:*

Tine freshly placed pavement as soon as it is practical after floating.

Tine with a self-propelled tining machine. Where using a tining machine is not practical, tine by hand. Produce uniformly deep grooves approximately 1/8 to 3/16 inch (3 mm to 5 mm) deep. Provide a finished surface free of tining defects. Complete before tining tears or unduly roughens the concrete.

Tine surface longitudinally as specified in standard spec 415.3.8.3.2.

**C.3 Curing Concrete**
**C.3.1 General**
*Replace standard spec 415.3.12.1 with the following:*
Maintain adequate moisture throughout the concrete mass to support hydration until the concrete develops sufficient strength to open it to service. Cure all concrete by impervious coating as specified in standard spec 415.3.12.2 within 75 minutes from the time concrete is discharged from the truck.

If the concrete is not cured as specified in the subsection, the engineer may suspend concrete placement operations.

**C.4 Extended Delivery Time**
*Delete paragraph one from standard spec 501.3.2.4.3.3.*

**C.5 Ready-Mixed Concrete**
**C.5.1 General**
*Replace standard spec 501.3.5.1 with the following:*

Use central-mixed concrete for all work under this special provision. Central-mixed concrete is completely mixed in a stationary mixer and transported to the point of delivery with or without mechanical agitation in the transporting vehicle.

**C.6 Hot Weather Concreting**
**C.6.1 General**
*Replace standard spec 501.3.8.2.1 with the following:*

Take the following steps to ensure that the concrete will cure during hot weather conditions. Submit a written temperature control plan at or before the pre-pour meeting. In that plan, outline the actions to control concrete temperature if the concrete temperature at the point of placement exceeds 80° F (27° C). Do not place concrete without the engineer's written acceptance of that temperature control plan. Perform the work as outlined in the temperature control plan.

If the air temperature exceeds 80° F (27° C) ensure that the asphalt base is in a moist condition during concrete placement. Water the asphalt base, as required, not less than six hours before placing the concrete. If the asphalt base subsequently dries, moisten it by sprinkling water just before placing the concrete. Sprinkle the water to avoid forming pools.

If the concrete temperature at the point of placement exceeds 90° F (32° C), do not place concrete for items covered in this special provision.

Notify the engineer whenever conditions exist that might cause the temperature at the point of placement to exceed 80° F (27° C). If project information is not available, obtain information from similar mixes placed for other nearby work.

Any additive or action taken to control the temperature of concrete to within the limits of this special provision, including but not limited to the addition of ice to the concrete mix, is considered incidental to the work and will not be measured or paid for separately.

**D Measurement**

The department will not measure Concrete Pavement 12-Inch Special. The department will use pay plan quantity according to the Pay Plan Quantity article.

**E Payment**

Conform to standard spec 415.5 and as modified in this special provision.

*Replace paragraph one of standard spec 415.5.1 with the following:*

The department will pay for plan quantities according to the Pay Plan Quantity article at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0180.0105 | Concrete Pavement 12-Inch Special | SY |

**E.1 Pay Adjustment for Compressive Strength**

The department will adjust pay for each lot using percent within limits (PWL) of the 28-day sublot average strengths for that lot. The department will measure PWL relative to the lower specification limit of 4500 psi.

SEF Rev. 14_1211

## 397. Asphaltic Material Binder, Item SPV.0180.0106.

**A Description**

This special provision describes furnishing and applying an asphaltic material binder to aggregate, at locations shown in the plans, to control erosion and prevent the growth of vegetation.

**B Materials**

**B.1 General**

Furnish emulsified asphalt, type RS 1 or RS 2 conforming to AASHTO M140, or type CRS 1 or CRS 2 conforming to AASHTO M208 for the asphaltic material.

Furnish evidence, to the satisfaction of the engineer, that the proposed product has been successfully used in a similar application.

**C Construction**

**C.1 Application**

Apply the Asphaltic Material binder uniformly over the dry surface at a rate just sufficient to ensure penetration and binding of the particles in the upper 2 inches of the aggregate blanket in accordance to the manufacturer's recommended rate and procedures. Avoid excessive application of asphaltic material binder and exercise care to prevent material run-off. Protect the surface of adjacent structures, barriers, and pavement to prevent splattering or discoloration by asphaltic material.

Protect asphaltic material binder from excessive dust exposure for the first 4 hours of curing.

**C.2 Test Section**

Prepare a test section utilizing aggregate and asphaltic material binder so the engineer will be able to assess the adequacy of the product and the application to yield the desired results. Test section to be a minimum of 3-feet x 3-feet. Notify the engineer no less than 24 hours in advance of preparing the test section to allow him time to arrange for witnessing the asphaltic material binder application and mixing with the aggregate. Cure test section according to product manufacturer's requirements before the engineer will accept the product for use.

If the test section is not accepted, prepare another test section and repeat the process. Repeat this procedure until the engineer accepts the test section. Use the same asphaltic material binder means and methods when installing the product that were used in preparing the accepted test section.

**D Measurement**

The department will measure Asphaltic Material Binder by the square yard in place, acceptably completed.

**E Payment**

The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0180.0106 | Asphaltic Material Binder | SY |

Payment is full compensation for furnishing, mixing and applying the asphaltic material binder to the aggregate; for cleaning any splatter of asphaltic material binder from adjacent structures, barriers, and pavement; and for making and disposing of test sections.
SEF Rev. 14_1210

## 398. Topsoil Special, Item SPV.0180.0200.

### A Description

This special provision section describes furnishing, placing, spreading, and finishing humus-bearing soil, adapted to sustain plant life, commonly known as topsoil, from locations the contractor furnishes beyond the limits of the right-of-way.

This special provision also describes removing topsoil from the sites of proposed roadway excavations and embankments in amounts and depths available and necessary to cover the work slopes. This work also includes reclamation, placing, spreading, and finishing of this topsoil.

### B Materials

Furnish material that is relatively free from large roots, sticks, weeds, brush, stones, litter, and waste products.

Furnish material, either obtained offsite, or material obtained within project limits, consisting of loam, sandy loam, silt loam, silty clay loam, or clay loam humus-bearing soils adapted to sustain plant life. Do not use surface soils from ditch bottoms, drained ponds, and eroded areas, or soils which are supporting growth of NR 40 listed plants and noxious weeds or other undesirable vegetation. Ensure that the material conforms to the following:

| Topsoil Requirements | Minimum Range | Maximum Range |
|---|---|---|
| Material Passing 2.00 mm (#10) Sieve* | 90% | 100% |
| PH Range | 6.0 | 7.0 |
| Organic Matter** | 5% | 20% |
| Clay | 5% | 30% |
| Silt | 10% | 70% |
| Sand and Gravel | 10% | 70% |

*See standard spec 625.3.3 for sieve requirements when using either sod or seed mixture 40.
**Organic matter determined by loss on ignition test of samples oven dried to constant weight at 212 F (100C).

## C Construction

### C.1 Preparing the Roadway for Topsoil

Undercut or underfill all areas designated to receive topsoil to a degree that if covered to the required depth with topsoil the finished work conforms to the required lines, grades, slopes and cross sections the plans and drawings show.

### C.2 Processing Topsoil

Mow topsoil procurement areas to a height of approximately 6 inches. Remove litter such as brush, rock, and other materials that will interfere with subsequent vegetation establishment.

Strip off the humus-bearing soil. Take care to minimize removing the underlying sterile soil. Then stockpile the topsoil on the right-of-way or place it directly on the designated areas.

Obtain topsoil from embankment areas outside the roadway foundation only if that additional material is required to cover the slopes, and conforms to the requirements of section B above. Utilize excess topsoil on the project or dispose of as specified in standard spec 205.3.12.

### C.3 Placing Topsoil

After preparing and finishing the areas designated for topsoil to the required lines, grades, slopes and cross section, place and spread the topsoil to a uniform depth as the plans show or the contract requires. If no depth is shown, place and spread the topsoil to a minimum depth of 4 inches in rural areas and a minimum depth of 6 inches in urban areas, or as the engineer designates.

Break down all clods and lumps using appropriate equipment to provide a uniformly textured soil.

Where using either sod or seed mixture 40 ensure that, for the upper 2 inches, 100 percent of the material passes a one-inch sieve and at least 90 percent passes the No. 10 sieve.

Remove rocks, twigs, foreign material, and clods that cannot be broken down. Dress the entire surface to present a uniform appearance. The engineer will not require rolling.

If light sandy soils are covered with heavier clay bearing loam topsoil, then mix or blend the 2 types of soils to a more or less homogeneous mixture by using the appropriate equipment.

**D Measurement**

The department will measure Topsoil Special acceptably completed by the square yard. The measured quantity shall equal the actual number of square yards of topsoiled area to the depth specified within the limits of construction designated on the plans, or in the contract, or as the engineer directs.

**E Payment**

The department will pay for measured quantities at the contract unit price under the following bid items:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0180.0200 | Topsoil Special | SY |

Payment for Topsoil is full compensation for removing, stockpiling, reclaiming, providing, processing, excavating, loading, hauling, and placing this material; and for undercutting excavations, or underfilling embankments necessary to receive this material. The department will make no allowance, adjustment, or measurement for payment under the Excavation bid items for undercutting cut sections, underfilling embankments, or deductions for materials obtained from areas of cut sections.

If an area is damaged by erosion after partial acceptance, the department will pay for restoring topsoil in these areas at a unit price determined by multiplying the contract unit price bid for Topsoil multiplied by 3, the department will pay for restoration under the Restoration Post Acceptance Topsoil administrative item.

The department will not pay for removing topsoil from outside the roadway foundation in embankment areas unless that material is necessary to cover the slopes.
SEF Rev.14_0922

## 399. Geogrid Reinforcement, Item SPV.0180.0800.

**A Description**

This special provision describes furnishing and installing geogrids for subgrade stabilization, base reinforcement, or pavement structure applications in accordance to the plans, standard spec 645, and as hereinafter provided.

**B Materials**

Provide geogrid that consists of either single or joined multiple layers of a uniform rectangular grid of bonded, formed, or fused polymer tensile strands crossing with a nominal right angle orientation. Utilize an insect, rodent, mildew, and rot resistant polymer grid consisting of polyester, polypropylene, polyamide, or polyethylene that maintains dimensional stability during handling, placing, and installation. Install geogrid at least 6.0 feet wide.

Provide geogrid that complies with the following physical properties:

| Test | Method | Value [1] |
|---|---|---|
| Tensile Strength at 5% Strain, Both Principal Directions (lb/ft) | ASTM D 4595 [2] | 450 min. |
| Flexural Rigidity Both Principal Directions (mg-cm) | ASTM D 1388 [3] | 150,000 min. |
| Aperture Area ($in^2$) | Inside Measurement [4] | 5.0 max |
| Aperture Dimension (in) | Inside Measurement [4] | 0.5 min. |

- [1] All numerical values represent minimum/maximum average roll values, i.e. the average minimum test results on any roll in a lot should meet or exceed the minimum specified value.

- [2] The tensile strength (T) of a joined multi-layered geogrid shall be computed using the following equation:

$$T = n(f)t$$

where

$n$ = the number of individual layers in the joined multi-layered geogrid,

$t$ = the tensile strength of a single layer of geogrid as determined using testing method ASTM D4595, and

$f$ = reduction factor based on the number of layers comprising the multi-layered system and determined by the equation f=1.00 - [0.04(n - 1)].

- [3] Values shall be determined by Option "A" (Cantilever Test) of testing method ASTM D1388 using test specimens that are 36 inches ±0.04 inch long. Test specimen widths for differing geogrids shall be variable and equal to one element plus ½ the aperture width on both sides of that element. An element is defined as the minimum number of parallel strands that form a distinguishable repeating pattern.

- [4] Aperture Area and Aperture Dimension for joined multi-layer geogrids shall be determined based on measurement of a single layer of the geogrid.

Protect the geogrid from ultraviolet radiation and from damage due to shipping and handling. Keep the geogrid dry until it is installed. The geogrid rolls shall be clearly marked to identify the material contained.

Deliver a sample of the geogrid material to the engineer at least 10 days prior to its incorporation into the work. At the same time, furnish a manufacturer's Certified Report of Test or Analysis that verifies that the geogrid delivered for use on the work meets the above requirements. Samples of geogrid for test purposes will be obtained from the job site for each 10,000 square yards or portions thereof used on the contract.

**C Construction**

Prior to placement of the geogrid, bring the indicated placement surface to the required lines, grades, and dimensions as shown on the plans. Smooth and shape the surface to eliminate any rocks, clods, roots, or other items that may cause damage to the geogrid during placement or covering.

Place the geogrid on the prepared surface at the locations and to the limits as shown on the plans. After placement, pull the geogrid taut and secure it using pins, clips, staples, or other devices to prevent movement or displacement. Place parallel strips of geogrid with a minimum overlap of 24 inches. Lap butt joints between roll ends a minimum of 12 inches. Fasten all lapped sections together by using ties, straps, clips, or other devices to develop a secure joint that meets the approval of the engineer. Do not operate vehicles or construction equipment directly on the geogrid.

Cover small rips, tears, or defects in the geogrid with an additional section of geogrid; secure the additional geogrid in place so it overlaps the damaged area by at least 3 feet in all directions. Remove and replace geogrid sections with large rips, tears, defects, or other damage at the direction of the engineer.

After placement, cover the geogrid to the indicated depth with the type of material required on the plans or in the special provisions. Placing, spreading, and compacting of this material shall comply with the applicable sections of the standard specifications or special provisions except that the initial lift of material placed on the geogrid must be at least 4 inches. Place, spread, and compact the required backfill material so the geogrid is not displaced or damaged. The engineer may require changes in equipment and operations to prevent such damage or displacement.

**D Measurement**

The department will measure Geogrid Reinforcement by the square yard of surface area upon which the geogrid has been placed acceptably completed.

**E Payment**

The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0180.0800 | Geogrid Reinforcement | SY |

Payment is full compensation for furnishing, transporting, and installing the geogrid and for furnishing and installing all devices and materials necessary to join or secure the geogrid in place.

Repair or replacement of damaged or defective geogrid is considered incidental to item.
SEF Rev. 14_1203

## 400. Soil Drying, Item SPV.0180.0801; Soil Drying Agent, Item SPV.0195.0801.

### A Description

Use a soil drying agent only when directed by the engineer and weather conditions are not conducive to using discing, natural sunlight and wind to dry the soil to within an acceptable range of soil moisture content for efficient compaction per the QMP Subgrade special provision. The drying agent will be used principally in the late fall, winter and early spring when drying weather is not normally available. Soil should be dried per this specification when the moisture content is greater than the specified percent above the soil optimum moisture content and discing and air drying are not effective in reducing the soil moisture content. The contractor cannot use a soil drying agent until the engineer determines that soil moisture content, project schedule and weather require that the agent be used. Drying agents will only be used to facilitate soil compaction after the approval and authorization of the engineer.

The drying agent to be used for the project will be Fly Ash. Other drying agents such as hydrated lime, lime kiln dust and cement kiln dust are not allowed to be used as drying agents.

Drying agents will not be considered as part of a Cost Reduction Incentive (CRI) and will have to meet the general requirements of this special provision. The fly ash is used in absorption and chemical binding of moisture to facilitate compaction. The intent of this specification is to dry the soil and not to increase the strength of the soil-fly ash mixture.

Fly ash can be used to dry most soils but the expectation is that it will be used for predominantly cohesive (clay - CL) and silty (ML and SM) soil. Clean sand and gravel will not benefit by addition of fly ash and therefore should not be dried using fly ash. The fly ash must be thoroughly mixed with the soil as fill lifts are placed to dry the soil and meet the compaction requirements.

### B Materials

Fly ash is a finely divided residue resulting from combustion of coal in an electric generating plant, transported from the boiler by flue gases and later collected by precipitators. The soil drying agent must consist of Class C fly ash according to ASTM C618. The fly ash shall conform to the general requirements of standard spec 501.2

### C Construction

#### C.1 Submittals

##### C.1.1 General

Prepare and submit soil drying agent mix and work plan at least 10 calendar days prior to beginning drying agent activities. A minimum dosage of 40 pounds of fly ash per square

yard to an 8-inch depth/lift by the dry weight of the soil must be used. WisDOT will accept the submittal as submitted or return the submittal with requested revisions. Do not start any drying agent work until WisDOT provides acceptance of soil drying agent mix and work plan. Acceptance of the submittals does not relieve the contractor of responsibility for successful completion of the earthwork.

### C.1.2 Submittals for Approval

**Soil Drying Agent Mix:**

a. Submit mix designs for the drying agent proposed for use. A mix design is required for each soil type and dosage rate. Resubmit as appropriate if the mixes are modified during the course of the work including fly ash source changes. The mix design must indicate the optimum amount of fly ash needed as a percentage of the soil dry weight for the soil to be dried. Each mix design shall show the ingredients of the mix and shall include:
    i. Type, source, and amounts of fly ash, and other additives.
    ii. Material Safety Data Sheet (MSDS) for the fly ash (provide once per fly ash source).
    iii. Source and amount of additional water, as needed.
    iv. Representative samples of soil and ash materials for materials test and mix proportion testing (provide once per soil type and fly ash source).
    v. Combined grading of each mix design.
    vi. Specific gravity of all materials.
    vii. Atterberg Limits tests (ASTM D-4318) for the soil and soil fly ash mixture.
    viii. Standard Proctor tests (ASTM D-698) on the soil and soil fly ash mixture.
    ix. Tests showing soil moisture loss with the proposed dosage rate.
    x. Results of required tests.
b. Submit certificates of compliance for each load of fly ash which is in accordance to ASTM C618 and certificates of compliance for all admixtures. Supporting test data shall be furnished when requested by WisDOT. All testing and sampling procedures shall be in accordance to ASTM C311.

**Soil Drying Agent Work Plan:** The work plan for placing the soil drying agent shall include:

a. Drying agent placement methods, mixing procedures and sequences for soil drying.
b. Method of transporting and distributing fly ash into the soil including rotary mixer equipment and materials.
c. Means for measuring fly ash per fill area. Use of truck tickets that specify net weight of fly ash in a truck is acceptable.
d. Embankments to be treated, natural moisture contents of the cut to fill soils, and proposed dosage rates.

Submit a revised work plan reflecting any changes made during the course of the work. Do not continue with Soil Drying Agent work until the revised work plan is approved by the engineer.

### C.1.3 Information Submittals

**Soil Drying Agent Daily Records:** Submit the following daily reports and records for soil drying agent.

a. Daily logs of drying agent placement operations at all locations (station and position) of embankment fill placement, including fly ash volumes, mix details and weather conditions.
b. Additional lab testing as identified in section C.1.2.a is expected to be required if the soil to be dried changes engineering characteristics. Supplemental test reports from a certified testing laboratory are required when the fill soil changes.

### C.1.4 Acceptance

The department will evaluate the Submittals for Approval with the requirements of these special provisions. Within 5 calendar days after receipt of the Submittals of Approval, WisDOT will notify the contractor of the acceptance of the submittal, or if additional information and/or changes are required. Any unacceptable part of the Submittals of Approval will require resubmission. The contractor must resubmit the Submittals of Approval for evaluation and review with the necessary changes or additional information provided. WisDOT will provide a written notice of acceptance or rejection of contractor's resubmitted Submittal for Approval within 5 calendar days after its receipt.

After WisDOT's acceptance of Submittal of Approval, no changes to the Submittal of Approval can be made without written consent of WisDOT.

All Information Submittals should be submitted to WisDOT. WisDOT can reject the submittals which do not provide adequate detail, as required herein. The contractor shall resubmit the rejected submittals within seven days upon the receipt of WisDOT's rejection notice.

### C.2 General Soil Drying Requirement

Notify WisDOT at least 24 hours in advance of the start of soil drying operations. Soil drying cannot be used on frozen soil or with frozen fly ash. Compaction must be started no later than 1 to 2 hours after the fly ash is mixed with the soil.

Soil drying agent must be thoroughly mixed into each lift of wet soil using a rotary mixer to be sure that the fly ash is uniformly distributed and uniformly dries the soil to acceptable moisture content for compaction.

Soil drying can be performed in colder weather as long as the soil and fly ash are not frozen. If fill placement must occur during freezing conditions, soil drying can be used but any soil/fly ash mixture that freezes must be removed including materials that freeze overnight. The removal must extend to an unfrozen subgrade and the frozen material must be replaced with non-frozen soil or soil/fly ash.

**C.3 Cleanup**
Care must be exercised by the contractor to prevent fugitive dust containing fly ash while mixing and placing the ash. Minimize spilling and do not allow blowing of fly ash on areas that do not need to be dried. Remove or mix any spilled ash with soil to prevent ash from becoming air born. Properly dispose or all waste materials.

**D Measurement**
The department will measure Soil Drying in area by the square yard per lift of the soil, effectively dried and acceptably completed.

The department will measure Soil Drying Agent per ton, acceptably completed, using truck weigh tickets.

**E Payment**
The department will pay for measured quantities at the contract unit price under the following bid items:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0180.0801 | Soil Drying | SY |
| SPV.0195.0801 | Soil Drying Agent | Ton |

Payment for Soil Drying is full compensation for preparing submittals, soil testing, maintaining daily records, and mixing drying agent with wet soil for compaction, including all necessary equipment, water and disposal of surplus materials. Compaction of fill is paid for under other specifications and not included herein.

Payment for Soil Drying Agent is full compensation for providing, hauling and spreading the drying agent.

No additional payment will be provided for Soil Drying when used in previously placed embankment areas that have been removed as a result of frost or poor drainage.

## 401. Slope Paving Crushed Aggregate Special, Item SPV.0180.4800.

**A Description**
This special provision describes furnishing, crushing and placing aggregate for slope paving and applying an epoxy resin binder with the aggregate, as shown in the plans, in accordance to the applicable provisions of standard spec 604, and as hereinafter provided.

**B Materials**
**B.1 General**
Utilize a low modulus, medium-viscosity, two-component epoxy resin binder.

Furnish evidence, to the satisfaction of the engineer, that the proposed product has been successfully used in a similar application.

Epoxy resin binder shall be clear to light amber when fully cured.

Utilize Wisconsin crushed aggregate limestone with 100% fractured faces and hues of tan, amber and gray conforming to the following nominal requirements:

| Sieve Size | Percent by Weight Passing |
|---|---|
| 4-Inch | 100 |
| 1-Inch | 0-25 |

**B.2 Minimum Requirements.**
Furnish epoxy resin binder material conforming to ASTM C-881 and AASHTO M-235 specifications and the following requirements:

- Total water absorption, ASTM D-570
  7 day, 1.3% (2 hour boil)
  14 day, 0.232% (24 hour immersion)
  Viscosity: 2,500 cps

**C. Construction**
**C.1 Application**
Apply the epoxy resin binder material uniformly over the surface of the paving at a rate just sufficient to ensure penetration and binding of the particles in the upper 2 inches of the aggregate blanket in accordance to the manufacturer's recommended rate and procedures. Utilize a two part sprayer with mixing completed at the nozzle to apply the binder. Avoid excessive application of epoxy resin binder and exercise care to prevent material run-off. Protect the surface of adjacent structures, barriers, and pavement to prevent splattering or discoloration by epoxy resin binder and immediately remove all material accumulations at the foot of the slope paving

Apply and mix epoxy resin binder under dry conditions only. Do not apply if rain is expected within 8 hours following epoxy resin application to crushed aggregate or as recommended by the manufacturer and approved by the engineer.

Ensure ambient air and surface temperature is between 50 and 90° F during, and for 24 hours following, application and mixing of the epoxy resin binder or as recommended by the manufacturer and approved by the engineer.

Protect installed crushed aggregate with epoxy resin binder from excessive dust exposure for the first 4 hours of curing.

**C.2 Test Section**
Prior to placing slope paving, prepare a test section utilizing the proposed aggregate and epoxy resin binder so the engineer will be able to assess the adequacy of the product and the application and mixing methods to yield the desired results. Test section to be 3-feet x 3-feet and a minimum of 4-inches thick. Notify the engineer no less than 24 hours in advance of preparing the test section to allow him time to arrange for witnessing the epoxy resin binder application and mixing with the aggregate. Cure test section according to

product manufacturer's requirements before the engineer will accept the product for use on the final structures.

If the test section is not accepted, prepare another test section and repeat the process, using either a different aggregate or epoxy resin binder. Repeat this procedure until the engineer accepts the test section. Use the same aggregate and epoxy resin binder means and methods when installing the product under each structure that were used in preparing the accepted test section.

**D Measurement**

The department will measure Slope Paving Crushed Aggregate Special by the square yard in place, acceptably completed.

**E Payment**

The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.180.4800 | Slope Paving Crushed Aggregate Special | SY |

Payment is full compensation for furnishing, crushing and placing crushed aggregate; for furnishing, mixing and applying the epoxy resin binder to the aggregate; for preparing the subsurface; for cleaning any splatter of epoxy resin binder to adjacent structures, barriers, and pavement; and for making and disposing of the test section.
SEF Rev. 14_1211

## 402. Cold Patch, Item SPV.0195.0100.

**A Description**

This special provision describes furnishing, stockpiling, placing, and maintaining cold patch material. Use the cold patch material for short term maintenance purposes to fill potholes/voids in the existing pavement surface that the engineer deems necessary.

**B Materials**

**B.1 General**

Furnish cold patch that is a combination of course aggregate, natural sand and bituminous material MC-250. Design the mixture to have: a workability range of 15-100º F without the addition of heat, good adhesion to wet surfaces, and resistance to damage by water, salt and deicing products. Design a uniform mixture that does not require any mixing or special handling prior to use.

**B.2 Gradations**
Conform to the following gradation requirements:

| SIEVE SIZE | PERCENT PASSING (by weight) |
|---|---|
| 1/2 Inch (12.5mm) | |
| 3/8 Inch (9.5mm) | 90 - 100 |
| No. 4 (4.75 mm) | 90 Max |
| No. 8 (2.38mm) | 20 - 65 |
| No. 200 (.074mm) | 2 - 10 |
| Bitumen | 4.8 - 5.4 |

**B.3 Contracts With Less Than 10 Tons of Mixture**
The engineer may waive QC testing on contracts with less than 10 tons of mixture. If testing is waived, acceptance will be by visual inspection unless defined otherwise by contract change order.

**B.4 Temporary Pavements**
The engineer may waive all testing for temporary cold patch, defined for this purpose as cold patch that will be placed and removed before contract completion.

**C Construction**
**C.1 General**
Choose a smooth, firm, and well-drained area for an on-site stockpile that is cleared of vegetation and foreign material that may contaminate the cold patch. Make the stockpile easily accessible, maintainable and replenishable at any time during the project. The stockpile is not to exceed 10 tons on site at any given time unless approved by the engineer. Remove and dispose of any unused portions of the stockpile at the completion of the project unless otherwise directed by the engineer.

Application of the cold patch must be able to be accomplished by hand labor. Remove all ponded water and loose debris prior to filling any potholes/voids. Place material into the pothole/void and compact flush with a tamper, roller, or vehicle tire. Traffic must be able to travel over the patch immediately after installation.

**D Measurement**
The department will measure Cold Patch by the ton stockpiled on site, acceptably completed.

**E Payment**
The department will pay for measured quantities at the contract unit price under the following bid items:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0195.0100 | Cold Patch | Ton |

Payment for cold patch is full compensation for the patch; preparing the pothole/void for material furnishing and providing a stockpile of material, compacting, and maintaining.

Remove and dispose of any unused portions of the stockpile at the completion of the project at no additional cost.
SEF Rev. 14_1211

## 403. HMA Longitudinal Joint Repair, Item SPV.0195.0120.

### A Description
This special provision describes the milling, brooming, placing of HMA, and maintenance of the HMA Longitudinal Joint Repair item in accordance to the pertinent requirements of the standard specifications, and as hereinafter provided.

### B Materials
*Delete standard spec 460.2.8.*

Submit a mix design under the Asphaltic Pavement Repair Special bid item. Furnish an asphaltic mixture meeting the requirements specified for either type E-10 under standard spec 460.2.

Provide asphaltic material PG 64-28 for this mix in accordance to standard spec 455.

Provide tack coat that is in accordance to standard spec 455.2.5.

### C Construction
#### C.1 General
Mill out an area no less than 2.0 feet wide to a depth down to the existing concrete pavement. The length of the repair will be determined by the engineer.

Clean the existing exposed concrete pavement surface with a power broom or other suitable equipment to remove millings or other objectionable matter prior to placing any HMA.

Conform to standard spec 315.3.1 for placement of the HMA pavement.

#### C.2 Maintenance
Maintain work done under the HMA Longitudinal Joint Repair item for the duration of the contract. This includes remilling and replacement of additional HMA pavement if required as determined by the engineer.

### D Measurement
The department will measure HMA Longitudinal Joint Repair by the ton acceptably completed.

**E Payment**

The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0195.0120 | HMA Longitudinal Joint Repair | Ton |

Payment for the HMA Longitudinal Joint Repair item is full compensation for milling the existing asphaltic surface, hauling and disposing of existing pavements, brooming the milled area prior to placing the HMA pavement, placing tack coat, providing and placing the asphaltic pavement mixture (including asphaltic material), and for maintaining the HMA Longitudinal Joint Repair.

SEF Rev. 15_0309

## 404. Management of Solid Waste, Item SPV.0195.0700.

**A General**

**A.1 Description**

This work will conform with the requirements of standard spec 205; to pertinent parts of the Wisconsin Administrative Code, Chapters NR 700-736 Environmental Investigation and Remediation of Environmental Contamination; Wisconsin Administration Code, Chapters NR 500-538, Solid Waste; and as shown on the plans and as supplemented herein.

Historic fill containing solid waste will be encountered within the construction limits. The solid waste contains NR 500 non-exempt industrial wastes including soil mixed with foundry sand and slag. Impacted waste material excavated during construction which cannot in the opinion of the environmental consultant be managed as petroleum-contaminated soil, common excavation or reused on-site will be managed as solid waste.

This work consists of excavating, segregating, temporary stockpiling, loading, hauling, and disposing of solid waste material at a WDNR-approved disposal facility. The nearest WDNR-approved disposal facilities are:

Advanced Disposal Emerald Park Landfill, LLC
W124 S10629 S 124th St
Muskego, WI 53150
Phone: (414) 529-1360

Waste Management Orchard Ridge Landfill
N96W13503 County Line Road
Menomonee Falls, WI 53051
Phone: (262) 253-8620

Provide information to the environmental consultant and engineer that indicates the WDNR-approved disposal facility that the contractor will use.

## A.2 Notice to the Contractor – Solid Waste Locations

The department and others completed hazardous materials assessment for locations within this project where excavation is required. Investigation for soil contamination was conducted at select locations. Results indicate that solid waste is present at the following location as shown on the plans:

- SW Core Pond, 12PSW+82 to 14PSW+74, from 30 feet right to 210 feet right of PSW reference line, from 0 to 8.5 feet bgs. Soil is contaminated with foundry waste in a layer ranging in thickness from approximately 1 inch to 3 feet. **There is an area inside of this location with TCLP (toxicity characteristic leaching procedure) -hazardous waste cadmium that likely will require out of state disposal.** Approximately 1,810 cubic yards (approximately 3,077 tons at an estimated 1.7 tons per cubic yard) of soil containing foundry waste soil will be excavated from this area of which approximately 40 tons will be considered TCLP –hazardous waste cadmium and 3,037 tons will be considered non-hazardous.

Directly load solid waste excavated by the project at the above location into trucks that will transport the material to a WDNR-licensed landfill facility for landfill disposal.

If obviously contaminated soils or other signs of NR 500 non-exempt solid waste and hazardous materials are unexpectedly encountered elsewhere on the project, terminate excavation activities in the area and notify the engineer. Examples of these unexpected conditions may include, but are not limited to, buried containers or tanks, noxious odors and fumes, stained soils, sheen on ground water, other industrial wastes, and significant volumes of municipal or domestic garbage.

No active groundwater monitoring wells were observed within the construction limits. If active groundwater monitoring wells are encountered during construction, notify the engineer and protect them to maintain their integrity. The environmental consultant will determine if monitoring wells need to be maintained. For monitoring wells that do need to be maintained, adjust the wells that do not conflict with structures or curb and gutter to be flush with the final grade. For wells that conflict with the previously mentioned items or if monitoring wells are not required to be maintained, they will be abandoned by others.

## A.3 Excavation Management Plan Approval

The excavation management plan for this project has been designed to minimize the off-site disposal of contaminated waste. The excavation management plan, including these special provisions, has been developed in cooperation with the WDNR. The WDNR concurrence letter is on file at the Wisconsin Department of Transportation. For further information regarding previous investigation and remediation activities in these areas contact:

| | |
|---|---|
| Name: | Andrew Malsom |
| Address: | 141 NW Barstow Street, Waukesha, WI 53187-0798 |
| Phone: | (262) 548-6705 |
| Fax: | (262) 548-6891 |
| E-mail: | andrew.malsom@dot.state.wi.us |

## A.4 Coordination

Coordinate work under this contract with the environment consultant:

| | |
|---|---|
| Consultant: | TRC Environmental Corporation |
| Address: | 150 N. Patrick Blvd. Ste. 180, Brookfield, WI 53045 |
| Contact: | Bryan Bergmann, P.G. or Tyler Stapel, P.E. |
| Phone: | (262) 879-1212 |
| Fax: | (262) 879-1220 |
| E-mail: | bbergmann@trcsolutions.com wstapel@trcsolutions.com |

The role of the environmental consultant will be limited to:

1. Determining the location and limits of solid waste to be excavated based on soil analytical results from previous investigations, visual observations, and field screening of soil that is excavated;
2. Identifying soils to be hauled to the landfill facility;
3. Documenting that activities associated with management of solid waste are in conformance with the solid waste management methods for this project as specified herein; and
4. Obtaining the necessary approvals for disposal of solid waste from the landfill facility.

Provide at least a 14-calendar day notice of the preconstruction conference date to the environmental consultant. At the preconstruction conference, provide a schedule for all excavation activities in the area of solid waste fill described in A.2 to the environmental consultant. Identify the WDNR licensed landfill facility that will be used for disposal of solid waste, and provide this information to the environmental consultant no later than 15 calendar days prior to commencement of excavation in the impacted area or at the preconstruction conference, whichever comes first. The environmental consultant will be responsible for obtaining the necessary approvals from the landfill facility for disposal of the solid waste.

Coordinate with the environmental consultant to ensure that the environmental consultant is present during excavation in the impacted areas. Notify the environmental consultant at least three calendar days prior to commencement of excavation in the impacted areas. Perform excavation in the impacted areas on a continuous basis until excavation work is completed. Do not transport soil containing solid waste offsite without prior approval from the environmental consultant.

## A.5 Health and Safety Requirements

*Supplement standard spec 107.1 with the following:*

During excavation activities, expect to encounter historic fill contaminated with industrial wastes (foundry sand and slag) and associated regulated metals and organic compounds. Site workers taking part in activities that will result in the reasonable probability of exposure to safety and health hazards associated with hazardous materials shall have completed health and safety training that meets the Occupational Safety and Health

Administration (OSHA) requirements for Hazardous Waste Operations and Emergency Response (HAZWOPER), as provided in 29 CFR 1910.120.

Prepare a site-specific Health and Safety Plan, and develop, delineate and enforce the health and safety exclusion zones for each impacted area as required by 29 CFR 1910.120. Submit the site-specific health and safety plan and written documentation of up-to-date OSHA training to the engineer prior to the start of work.

**B (Vacant)**

**C Construction**

*Supplement standard spec 205.3 with the following:*

Control operations in the impacted areas to minimize the quantity of soil excavated.

The environmental consultant will periodically monitor soil excavated from the areas identified in A.2 above. The environmental consultant will evaluate excavated soil based on field screening results, visual observations, and soil analytical results from previous environmental investigations. Assist the environmental consultant in collecting soil samples for evaluation using excavation equipment. The sampling frequency shall be a maximum of one sample for every 20 cubic yards excavated.

Directly load and haul solid waste designated by the environmental consultant for offsite disposal to the WDNR approved landfill facility. Use loading and hauling practices that are appropriate to prevent any spills or releases of the material. Prior to transport, sufficiently dewater soils designated for off-site disposal so as not to contain free liquids.

Verify that the vehicles used to transport material are licensed for such activity in accordance to applicable state and federal regulations. Obtain the necessary disposal facility approvals and WDNR approvals for disposal. Do not transport regulated solid waste off-site without obtaining the approval of the environmental consultant and engineer and notifying the disposal facility.

During excavations in the areas of known contamination, larger chunks of clean concrete (~2 cubic feet), asphalt and bricks will be segregated from the fill, to the extent practical and managed as common excavation. Under NR 500.08 this material is exempt from licensing and requirements of Wisconsin Administrative Code NR 500-538 of the solid waste regulations, and will be reused as designated by the engineer as fill on the project, or it will be disposed of off-site at the contractor's disposal site(s).

If dewatering is required in an area of known contamination, water generated from dewatering activities may contain low-concentrations of petroleum compounds and metals. Based on the limited groundwater testing performed in the Phase 2.5 investigation, the water generated may meet the effluent limits specified in "Contaminated Groundwater from Remedial Action Operations" (WPDES Permit No. WI-0046566-5), Table 3.1 once standard construction sediment removal is employed. Notify the engineer of any dewatering activities, and obtain any permits necessary to discharge water. Provide copies

of such Permit to the engineer. Ensure continuous dewatering and excavation safety at all times. Provide, operate, and maintain adequate pumping equipment and drainage and disposal facilities. Meet any requirements and pay any costs for obtaining and complying with such permit use. Follow all applicable legislative statutes, judiciary decisions, and regulations of the State of Wisconsin.

Costs associated with excavation dewatering in the contaminated areas are considered incidental to this pay item. The Wisconsin Department of Transportation will be the generator of petroleum-contaminated soil and regulated solid waste from this construction project.

**D Measurement**

The department will measure Management of Solid Waste by the ton of soil or waste accepted by the disposal facility and as documented by weight tickets.

**E Payment**

The department will pay for measured quantities at the contract unit price under the following item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0195.0700 | Management of Solid Waste | Ton |

Payment is full compensation for excavating, segregating, loading, hauling, and landfill disposal of solid waste; obtaining solid waste collection and transportation service operating licenses; assisting in the collection of soil samples for field evaluation; and for dewatering of soils prior to transport, if necessary.

**ADDITIONAL SPECIAL PROVISION 1 (ASP 1)**
**FOR TRANSPORTATION ALLIANCE FOR NEW SOLUTIONS (TrANS)**
**PROGRAM EMPLOYMENT PLACEMENTS AND APPRENTICESHIPS**

The Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU), Section 5204(e) – Surface Transportation Workforce Development Training and Education, provides for 100 percent Federal funding if the core program funds are used for training, education, or workforce development purposes, including "pipeline" activities. The core programs includes: Congestion Mitigation and Air Quality Improvement (CMAQ) Program, Highway Bridge Program (HBP), Interstate Maintenance (IM), National Highway System (NHS), and Surface Transportation Program (STP). These workforce development activities cover surface transportation workers, including OJT/SS programs for women and minorities as authorized in 23 U.S.C. §140(b).

***TrANS*** is an employment program originally established in 1995 in Southeastern Wisconsin. Currently TrANS has expanded to include TrANS program locations to serve contractors in Southeast (Milwaukee and surrounding counties), Southcentral (Dane County and surrounding counties including Rock County), and most Northeastern Wisconsin counties from locations in Keshena, Rhinelander and surrounding far Northern areas. TrANS attempts to meet contractor's needs in other geographic locations as possible. It is an industry driven plan of services to address the outreach, preparation, placement and retention of women, minorities and non-minorities as laborers and apprentices in the highway skilled trades. These candidate preparation and contractor coordination services are provided by community based organizations. For a list of the TrANS Coordinators contact the Disadvantaged Business Enterprise Office at (414) 438-4583 in Milwaukee or (608) 266-6961 in Madison. These services are provided to you at no cost.

## *I. BASIC CONCEPTS*

Training reimbursements to employing contractors for new placements, rehires or promotions to apprentice of TrANS Program graduates will be made as follows:

1) **On-the-Job Training, Item ASP.1T0G, ASP 1 Graduate.** At the rate of $5.00 per hour on federal aid projects when TrANS graduates are initially hired, or seasonally rehired, as unskilled laborers or the equivalent.

   Eligibility and Duration: To the employing contractor, for up to 2000 hours from the point of initial hire as a TrANS program placement.

   Contract Goal: To maintain the intent of the Equal Employment Opportunity program, it is a goal that 15 *(number)* TrANS Graduate(s) be utilized on this contract.

2) **On-the-Job Training, Item ASP.1T0A, ASP 1 Apprentice.** At the rate of $5.00 per hour on federal aid projects at the point when an employee who came out of the TrANS Program is subsequently entered into an apprenticeship contract in an underutilized skilled trade (this will include the Skilled Laborer Apprenticeship when that standard is implemented).

Eligibility and Duration: To the employing contractor, for the length of time the TrANS graduate is in apprentice status.

Contract Goal: To maintain the intent of the Equal Employment Opportunity program, it is a goal that 15 *(number)* TrANS Apprentice(s) be utilized on this contract.

3) The maximum duration of reimbursement is two years as a TrANS graduate plus time in apprentice status.

4) If a TrANS program is not available in the contractor's area and another training program is utilized, payment of On-the-Job Training hours may be approved by the Wisconsin Department of Transportation (WisDOT) if the training program meets the established acceptance criteria. Only On-the-Job Training Hours accumulated after WisDOT approval will be reimbursed as specified under Items ASP.1T0G and ASP.1T0A. For more information, contact the Disadvantaged Business Enterprise Office at the phone numbers listed above.

5) WisDOT reserves the right to deny payments under items ASP.1T0G and ASP.1T0A if the contractor either fails to provide training or there is evidence of a lack of good faith in meeting the requirements of this training special provision.

## *I. RATIONALE AND SPECIAL NOTE*

The $5.00 per hour now being paid for TrANS placements is intended to cover the duration of two years to allow for reaching entry-level laborer status. An additional incentive, the $5.00 rate, would promote movement into the underutilized skilled trades' apprenticeships and applies until the individual completes their apprenticeship. These incentives benefit TrANS candidates by giving them a better opportunity to enter a skilled trade; benefits contractors who will be assisted in meeting their EEO profiles and goals; and benefits the public who will see the program reinforce larger public-private employment reform in Wisconsin. The pool of TrANS graduates was created for the purpose of addressing underutilization in the skilled trades, an objective that is further reinforced by a parallel retention pilot program, known as the Companywide Reporting. *Whether or not reimbursement is involved, the WisDOT reassures contractors who are in the Companywide Program that TrANS placements still contribute toward fulfilling the new hire goal of 50% women and minorities.* Based on data administered by United States Department of Labor (US DOL), the highway skilled trades remain underutilized for women statewide (less than 6.9%); and for minorities in all counties (% varies by county).

NOTE: *Unless using other advancement strategies, contractors are encouraged to use some or all of this monetary incentive to offset the cut in hourly wages an individual may incur when entering an apprenticeship if the full general laborer hourly rate has been previously paid. No special accounting measures are required.*

## *II. IMPLEMENTATION*

The implementation of ASP 1 is intended to cover only the amount of time it takes for underutilization to be resolved across the trades. This will be measured annually at the county and/or state levels using data administered by WisDWD in relation to goals set by the USDOL-

OFCCP. With appropriate state and federal approvals, we may also do some measurement at the company level.

It is the contractor's responsibility to note on their Certified Payrolls if their employee is a TrANS graduate or a TrANS apprentice. The District EEO Coordinators utilize the information on the Certified Payrolls to track the hours accumulated by TrANS Graduates and TrANS apprentices on WisDOT contracts. Payment under this ASP 1 is made based on the hours recorded off of the Certified Payrolls. Tracking may eventually include improved linkages with the WisDWD apprentice database, information from company and committee level sources.

TrANS is nondiscriminatory by regulation, and is a tool for optional use by contractors to address the underutilization of women and minorities as laborers and apprentices in our industry's skilled trades.

## IV. *TRANS TRAINING*

As part of the contractor's equal employment opportunity affirmative action program, training shall be provided to employees enrolled in apprenticeship and on-the-job training programs as follows:

The contractor shall provide on-the-job training aimed at developing full journey workers in the type of trade or job classifications involved. In the event the contractor subcontracts a portion of the contract work, the contractor shall determine how many, if any, of the trainees are to be trained by the subcontractor provided, however, that the contractor shall retain the primary responsibility for meeting the training requirements imposed by this special provision. The contractor shall also insure that this training special provision is made applicable to such subcontract.

Training and upgrading of minorities and women toward journey workers status is a primary objective of this training special provision. Accordingly, the contractor shall make every effort to enroll minority trainees and women (e.g., by conducting systematic and direct recruitment through public and private sources likely to yield minority trainees and women trainees); to the extent such persons are available within a reasonable area of recruitment. The contractor will be given an opportunity and will be responsible for demonstrating the steps that they have taken in pursuance thereof, prior to determination as to whether the contractor is in compliance with this training special provision. This training commitment is not intended, and shall not be used, to discriminate against any applicant for training, whether a member of a minority group or not.

No employee shall be employed as a trainee in any classification in which they have successfully completed a training course leading to journey workers status or in which they have been employed as a journey worker. The contractor should satisfy this requirement by including appropriate questions in the employee application or by other suitable means. Regardless of the method used, the contractor's records should document the findings in each case.

## V. APPRENTICESHIP TRAINING

The Federal Highway Administration's (FHWA) policy is to require full use of all available training and skill improvement opportunities to assure increased participation of minority groups, disadvantaged persons and women in all phases of the highway construction industry. The FHWA On-the-Job Training (OJT) Program requires the State transportation agencies (STAs) to establish apprenticeships and training programs targeted to move women, minorities, and disadvantaged individuals into journey-level positions to ensure that a competent workforce is available to meet highway construction hiring needs, and to address the historical under-representation of members of these groups in highway construction skilled crafts.

The OJT Supportive Services (OJT/SS) Program was established in Title 23 Code of Federal Regulations (CFR), Part 230) to supplement the OJT program and support STA training programs by providing services to highway construction contractors and assistance to highway construction apprentices and trainees. The primary objectives of OJT/SS are:

(1) To increase the overall effectiveness of the State highway agencies' approved training programs.
(2) To seek other ways to increase the training opportunities for women, minorities, and disadvantaged individuals.

The STAs are responsible for establishing procedures, subject to the availability of Surface Transportation and Bridge Funds under 23 U.S.C. §140(b*)* (Nondiscrimination), for the provision of supportive services with respect to training programs approved under 23 CFR, Part 230(a*)* (Equal Employment Opportunity on Federal and Federal-aid Construction Contracts – including Supportive Services).

The contractor and subcontractor shall maintain records to demonstrate compliance with these apprenticeship requirements. Reasonable exemptions and modifications to and from any or all of these requirements will be determined by the Wisconsin Department of Transportation-Civil Rights Office. A request for an exemption or modification, with justification, shall be made in writing, addressed to WisDOT Civil Rights Office, 4802 Sheboygan Avenue, P.O. Box 7965, Rm. 451, Madison, WI 53707.

# ADDITIONAL SPECIAL PROVISION 3
# DISADVANTAGED BUSINESS ENTERPRISE PROGRAM

## 1. Description

### General

a. The disadvantaged business enterprise (DBE) requirements of 49 CFR Part 26 apply to this contract. The department's DBE goal is shown on the cover of the bidding proposal. The contractor can meet the specified contract DBE goal by procuring services or materials from a DBE or by subcontracting work to a DBE. The department calculates the DBE participation as the dollar value of DBE participation included in the bid expressed as a percentage of the total contract bid amount.

b. Under the contract, the contractor agrees to provide the assistance to participating DBE's in the following areas:

   i. Produce accurate and complete quotes.
   ii. Understand highway plans applicable to their work.
   iii. Understand specifications and contract requirements applicable to their work.
   iv. Understand contracting reporting requirements.

c. The department encourages the contractor to assist and develop DBE firms to become fully knowledgeable contractors to successfully perform on its contracts.

d. For information on the disadvantaged business program, visit the department's Civil Rights and Compliance Section website at:

   http://wisconsindot.gov/Pages/doing-bus/civil-rights/dbe/default.aspx

## 2. Definitions

a. Interpret these terms, used throughout this additional special provision, as follows:

   i. **Bid Percentage:** The DBE percentage indicated in the bidding proposal at the time of bid.
   ii. **DBE:** A disadvantaged business enterprise (DBE) certified as a DBE by the department and included on the department's list of certified DBE's who are determined to be ready, willing and able.
   iii. **DBE goal:** The amount of DBE participation expected in the contract as shown on the cover of the Highway Work Proposal.
   iv. **Discretionary Goal:** A contractor assigned DBE goal, typically abbreviated as “Disc” on the cover of the Highway Work Proposal, which is enforced as committed.
   v. **Manufacturer:** A firm that operates or maintains a factory or establishment that produces, on the premises, the materials, supplies, articles, or equipment required under the contract.
   vi. **Supplier:** A firm that owns, operates, or maintains a store, warehouse, or other establishment in which the materials, supplies, articles or equipment required under the contract are bought, kept in stock, and regularly sold or leased to the public.
   vii. **Voluntary Achievement:** The amount of DBE participation achieved and reported in the contract in excess of the assigned goal.

## 3. DBE Percentage Required at Bid Submission

Indicate the bid percentage (i.e. 0% through 100%) of DBE participation on the completed bidding proposal, including projects with discretionary goals. For electronic submittals, show the percentage in the miscellaneous data folder, Item 3, DBE Percent. For paper submittals, show the percentage on the sheet included after the schedule of items. By submission of the bid, the bidder contractually

commits to DBE participation at or above the bid percentage, or certifies that they have utilized comprehensive good faith efforts to solicit and utilize DBE firms to meet the DBE participation requirements of this contract proposal, and that the bid percentage is reflective of these good faith efforts. If the bidder does not indicate the bid percentage of DBE participation on the completed bidding proposal, the department will consider the bid irregular and may reject the bid.

**4. Department's DBE Evaluation Process**

**a. Documentation Submittal**

Within 10 business days after the notification of contract award, the contractor is to identify, by name, the DBE firms whose utilization is intended to satisfy this provision, the items of work of the DBE subcontract or supply agreement and the dollar value of those items of work by completing the Commitment to Subcontract to DBE Form [DT1506] and all necessary attachment A forms, as well as, Good Faith Waiver Form [DT1202] and supporting documentation as necessary. If the contractor fails to furnish the required forms within the specified time, the department may cancel the award. Delay in fulfilling this requirement is not a cause for extension of the contract time and shall not be used as a tool to delay execution.

**i. Bidder Meets DBE Goal**

If the bidder indicates that the contract DBE goal is met, after award and before execution, the department will evaluate the Commitment to Subcontract to DBE Form DT1506 and attachment A(s) to verify the actual DBE percentage achieved. If the DBE commitment is verified, the contract is eligible for execution with respect to the DBE commitment.

**ii. Bidder Does Not Meet DBE Goal**

(1) If the bidder indicates a bid percentage on the Commitment to Subcontract to DBE Form [DT1506] that does not meet the contract DBE goal, the bidder must submit a Good Faith Waiver Form [DT1202] and supporting documentation. After award and before execution, the department will evaluate the bidder's DBE commitment and consider the bidder's good faith waiver request.

(2) The department will review the bidder's good faith waiver request and notify the bidder of one of the following:

a. If the department grants a good faith waiver, the bid is eligible for contract execution with respect to DBE commitment.

b. If the department rejects the good faith waiver request, the department may declare the bid ineligible for execution. The department will provide a written explanation of why the good faith waiver request was rejected. The bidder may appeal the department's rejection as allowed under 7 a. & b.

**5. Department's Criteria for Good Faith Effort**

The Code of Federal Regulations {CFR}, 49 CFR Part 26-Appendix A, is the guiding regulation concerning good faith efforts. However, the federal regulations do not define “good faith” but states that bidder must actively and aggressively attempt to meet the goal. The federal regulations are general and do not include every factor or effort that can be considered. As a result, each state must establish its own processes and consider the factors established in its own process when making a determination of good faith.

a. The department will only grant a good faith waiver if the bidder has made the effort, given the relevant circumstances under the contract that a bidder actively and aggressively seeking to meet the goal would make. The department will evaluate the bidder's good faith effort to determine whether a good faith waiver will be granted. The bidder must demonstrate, on the DT1202 that they

have aggressively solicited DBE participation in an attempt to meet the contract DBE goal and attaining the stated DBE goal is not feasible.

b. The department, in conjunction with industry stakeholders, has developed the following guidance for contractor good faith effort. The guidance and the attached appendices provide a framework for the actions required by all parties in the processing and evaluation of bidder's total efforts to achieve the project specific DBE goal prior to the bid letting date.

c. Prime Contractors should:

i. Document all efforts and decisions made toward achieving the DBE goal on the contract. The bidder should use the Civil Rights & Compliance System [CRCS] and related WisDOT-approved DBE outreach tools, including the Bid Express Small Business Network, to foster DBE participation on all applicable contracts.

ii. Request quotes by identifying potential items to subcontract and solicit. Prime contractors are strongly encouraged to include in their initial contacts a single page including a detailed list of items for which they are accepting quotes, by project, within a letting. *See attached sample entitled "Sample Contractor Solicitation Letter" in Appendix A*. Prime contractors should also indicate a willingness to accept quotes in areas they are planning to perform themselves, ***as required by federal rules***. In some cases, it might be appropriate to use DBE's to do work in a prime contractor's area of specialization.

(1) Solicit quotes through all reasonable and available means from certified DBE firms who match 'possible items to subcontract' and send copies to DBESS office, highlighting areas in which you are seeking quotes. Email is acceptable.

(2) SBN is the preferred outreach tool. https://www.bidx.com/wi/main Other acceptable means include postal mail, email, fax, phone call.

a. Primes must ask DBE firms for a response in their solicitations. See *Sample Contractors Solicitation Letter* in Appendix. This letter can be included as an attachment to the SBN sub-quote request.

b. Solicit quotes at least 10 calendar days prior to the letting date {ideally two Fridays before the letting} to allow DBE firms sufficient time to respond. Prime contractors should contact DBE firms early, asking them if they need help in putting together a quote, or helping to arrange for equipment needs, or solve other problems.

(3) Second solicitation should take place within 5 days

a. An email solicitation is highly recommended for this second solicitation

(4) Upon request, provide interested DBE firms with adequate information about plans, specifications and the requirements of the contract by letter, information session, email, phone call and/or referral.

(5) When potential exists, advise interested DBE firms on how to obtain bonding, line of credit or insurance as may be requested.

(6) Document DBE firm's interest in quoting by taking appropriate steps to follow up initial solicitation with:

a. Email to all prospective DBE firms in relevant work areas
b. Phone call log to DBE firms who express interest via written response or call.
c. Fax/letter confirmation
d. Copy of the DBE quotes
e. Signed copy of Bid Express SBN Record of Subcontractor Outreach Effort.

d. Evaluate DBE quotes as documentation is critical if the prime does not utilize the DBE firm's quote for any reason.

   i. Evaluate DBE firm's capability to perform 'possible items to subcontract' using legitimate reasons, including but not limited to, ***a discussion with the DBE firm*** regarding its capabilities prior to the bid letting. If lack of capacity is your reason for not utilizing the DBE quote, you are required to contact the DBE directly regarding their ability to perform the work indicated in the UCP directory as their work area [NAICS code]; only the work area and/or NAICS code listed in the UCP directory will be counted for DBE credit. Documentation of the conversation is required.

   ii. In striving to meet a DBE conscious contract goal, prime contractors are expected to use DBE quotes that are responsive and reasonable. This includes DBE quotes that are not the low quote.

   iii. **Special Circumstance:** Evaluation of DBE quotes with tied bid items. "Tied quotes are the condition in which a subcontractor submits quotes including multiple areas of expertise across multiple work areas noting that the items and price are tied. Typically this type of quoting represents a cost saving to the prime but is not clearly stated as a discount; tied quotes are usually presented as 'all or none' quote to the prime." When non-DBE subcontractors submit tied bid items in their quotes to the prime, the DBE firms' quote may seem not competitive. In such a case, the following steps are taken in comparing the relevant quotes. These are qualitative examples.

      (1) Compare bid items common to both quotes, noting the reasonableness in the price comparison.

      (2) Review quotes from other firms for the bid items not quoted by the DBE firm to see if combining both can provide the same competitive advantage that the tied bid items offered.

e. After notification of contract award, submit **'Commitment to Subcontract'** form within the time period specified in the contract.

   i. Provide the following information along with department form DT1202:

      (1) The names, addresses, e-mail addresses, telephone numbers of DBE's contacted. The dates of both initial and follow-up contact. A printed copy of SBN solicitation is acceptable.

      (2) A description of information provided to the DBE's regarding the plans, specifications, and estimated quantities for portions of the work to be performed by that DBE.

      (3) Photocopies or electronic copies of all written solicitations to DBE's.

      (4) Documentation of each quote received from a DBE and, if rejected, the reason for that rejection.

      (5) Bidder attendance at any pre-solicitation or pre-bid meetings the department held to inform DBE's of participation opportunities available on the project.

f. The department's DBE Support Services Office is available by phone, email or in writing to request assistance in meeting the DBE goal:

DBE Support Services Office
6150 Fond du Lac Ave.
Milwaukee, WI 53218
Phone: 414-438-4583 / 608-266-6961
Fax: 414-438-5392
E-mail: DOTDBESupportServices@dot.wi.gov

**6. Bidder's Appeal Process**

a. A bidder can appeal the department's decision to deny the bidder's good faith waiver request. The bidder must provide written documentation refuting the specific reasons for rejection as stated in the department's rejection notice. The bidder may meet in person with the department if so requested. Failure to appeal within 7 calendar days after receiving the department's written notice of rejection of a good faith waiver request under constitutes a forfeiture of the bidder's right of appeal. If the bidder does not appeal, the department may declare the bid ineligible for execution.

b. The department will appoint a representative, who did not participate in the original determination, to assess the bidder's appeal. The department will issue a written decision within 7 calendar days after the bidder presents all written and oral testimony. In that written decision, the department will explain the basis for finding that the bidder did or did not meet the contract DBE goal or make an adequate good faith effort to meet the contract DBE goal. The department's decision is final. If the department finds that the bidder did not meet the contract DBE goal or did not make adequate efforts to meet the DBE goal, the department may declare the bid ineligible for execution.

**7. Department's Criteria for DBE Participation**

**Department's DBE List**

a. The department maintains a DBE list on the department's website

http://wisconsindot.gov/Documents/doing-bus/civil-rights/dbe/ucp-directory.xlsx

b. The DBE office is also available to assist at 414-438-4583 or 608-266-6961.

**8. Counting DBE Participation**

**Assessing DBE Work**

a. The department will only count the DBE usage towards the contract DBE goal if the DBE firm is certified as a DBE by one of the unified certification program agencies. If a firm becomes DBE certified before entering into a subcontract, the department may consider that DBE usage towards the contract goal. The department only counts the value of the work a DBE actually performs towards the DBE goal. The department assesses the DBE work as follows:

b. The department counts work performed by the DBE's own resources. The department includes the cost of materials and supplies the DBE obtains for the work. The department also includes the cost of equipment the DBE leases for the work. The department will not include the cost of materials, supplies, or equipment the DBE purchases or leases from the prime contractor or its affiliate, except the department will count non-project specific leases the DBE has in place before the work is advertised.

c. The department counts fees and commissions the DBE charges for providing a bona fide professional, technical, consultant, or managerial services. The department also counts fees and commissions the DBE charges for providing bonds or insurance. The department will only count costs the engineer deems reasonable based on experience or prevailing market rates.

d. If a DBE subcontracts work, the department counts the value of the subcontracted work only if the DBE's subcontractor is also a DBE.

e. The contractor shall maintain records and may be required to furnish periodic reports documenting its performance under this item.

f. It is the prime contractor's responsibility to determine the DBE's ability to perform the work with the use of the UCP directory.

**9. Commercially Useful Function**

a. The department counts expenditures of a DBE toward the DBE goal only if the DBE is performing a commercially useful function on that contract.
b. A DBE is performing a commercially useful function if the following conditions are met:
**c.** For contract work, the DBE is responsible for executing a distinct portion of the contract work and it is carrying out its responsibilities by actually performing, managing, and supervising that work.
**d.** For materials and supplies, the DBE is responsible for negotiating price, determining quality and quantity, ordering, and paying for those materials and supplies.

**10. Trucking**

All bidders are expected to adhere to the department's current trucking policy posted on the HCCI website

http://wisconsindot.gov/Documents/doing-bus/civil-rights/dbe/trucking-utilization-policy.pdf

**11. Manufacturers and Suppliers**

The department counts material and supplies a DBE provides under the contract. The department will give full credit toward the DBE goal if the DBE is a manufacturer of those materials or supplies. The department will give 60 percent credit toward the DBE goal if the DBE is merely a supplier of those materials or supplies. It is the bidder's responsibility to find out if the DBE is considered a supplier or a manufacturer before listing them on Commitment to Subcontract to DBE form DT1506.

**12. DBE Prime**

If the prime contractor is a DBE, the department will only count the work the contractor performs with its own forces, the work DBE subcontractors perform, and the work DBE suppliers or manufacturers perform.

**13. Joint Venture**

If a DBE performs as a participant in a joint venture, the department will only count that portion of the total dollar value of the contract equal to that portion of the work that the DBE performs with its own forces.

**14. Mentor Protégé**

a. If a DBE performs as a participant in a mentor protégé agreement, the department will credit the portion of the work performed by the DBE protégé firm
b. On every other project that the mentor protégé team identifies itself on.
c. For no more than one half of the total contracted DBE goal on any WisDOT project.

**15. DBE Replacement**

In the event a Prime Contractor needs to replace a DBE firm originally listed on the approved DBE Commitment Form DT1506, the Prime Contractor must comply with the department's DBE Replacement Policy located on the DBE page on the following web site:

http://wisconsindot.gov/Documents/doing-bus/civil-rights/dbe/policy-statement.pdf

**16. Changes to the approved DBE Commitment Form DT1506**

If there are any changes to the approved Commitment to Subcontract to DBE Form DT1506, the prime contractor must submit a revised DBE Commitment Form DT1506 and relevant attachment A(s) to the DBE Programs Office within 5 business days.

**17. Contract Modifications**

When additional opportunity is available by contract modifications, the Prime Contractor shall utilize DBE Subcontractors that were committed to equal work items, in the original contract.

**18. Payment**

Costs for conforming to this Additional Special Provision (ASP) and any associated DBE requirements are incidental to the contract.

# APPENDIX A
# Sample Contractor Solicitation Letter Page 1
***This sample is provided as a guide not a requirement***

GFW SAMPLE MEMORANDUM

**TO:** DBE FIRMS

**FROM:** POTENTIAL PRIME CONTRACTOR OR MAJOR SUBCONTRACTOR

**SUBJECT:** **REQUEST FOR DBE QUOTES**

**LET DATE & TIME**

**DATE:** MONTH DAY YEAR

**CC:** DBE OFFICE ENGINEER

---

Our company is considering bidding on the projects indicated on the next page, as a prime and/or a subcontractor for the Wisconsin Department of Transportation Month- date -year Letting. Page 2 lists the projects and work items that we may subcontract for this letting. We are interested in obtaining subcontractor quotes for these projects and work categories. Also note that we are willing to accept quotes in areas we may be planning to perform ourselves as required by federal rules.

Please review page 2, respond whether you plan to quote, highlight the projects and work items you are interested in performing and return it via fax or email within 3 days. Plans, specifications and addenda are available through WisDOT at the DBE Support Services office or at the Highway Construction Contract Information (HCCI) site at http://roadwaystandards.dot.wi.gov/hcci/

Your quote should include all of the costs required to complete the items you propose to perform including labor, equipment, material, and related bonding or insurance. The quote should note items that you are DBE certified to perform, tied items, and any special terms. Page 2, with the indicated projects and items you plan to quote, should be used as a cover sheet for your quote.

Please make every effort to have your quotes into our office by time deadline the prior to the letting date. ***Make sure the correct letting date, project ID and proposal number, unit price and extension are included in your quote.*** We prefer quotes be sent via SBN but prime's alternative's are acceptable. Our office hours are include hours and days. Please call our office as soon as possible prior to the letting if you need information/clarification to prepare your quote at contact number.

If you wish to discuss or evaluate your quote in more detail, contact us after the contract is awarded. Status of the contract can be checked at WisDOT's HCCI site at http://roadwaystandards.dot.wi.gov/hcci/

All questions should be directed to:

Project Manager, John Doe,
Phone: (000) 123-4567
Email: Joe@joetheplumber.com
Fax: (000) 123- 4657

Again please make every effort to have your quotes into our office by time deadline prior to the letting date.

**We prefer quotes be sent via SBN but prime's preferred alternative's are acceptable**.

If there are further questions please direct them to the prime contractor's contact person at phone number.

# APPENDIX B
# BEST PRACTICES FOR PRIME CONTRACTOR & DBE SUBCONTRACTOR GOOD FAITH EFFORT

*This list is not a set of requirements; it is a list of potential strategies*

**Primes**

- Prime contractor open houses inviting DBE firms to see the bid "war room" or providing technical assistance
- Participate in speed networking and mosaic exercises as arranged by DBE office
- Host information sessions not directly associated with a bid letting;
- Participate in a formal mentor protégé or joint venture with a DBE firm
- Participate in WisDOT advisory committees i.e. TRANSAC, or Mega Project committee meetings
- Facilitate a small group DBE 'training session' Clarifying how your firm prepares for bid letting, evaluates subcontractors, preferred qualifications and communication methods
- Encourage subcontractors to solicit and highlight DBE participation in their quotes to you
- Quality of communication, not quantity creates the best results. Contractors should do as thorough a job as possible in communicating with DBE firms before the bid and provide any assistance requested to assure best possible bid.

**DBE**

- DBE firms should contact primes as soon as possible with questions regarding their quotes or bid; seven days prior is optimal.
- Continually check for contract addendums on the HCCI website through the Thursday prior to letting to stay abreast of changes.
- Review the status of contracts on the HCCI website reviewing the 'apparent low bidder' list, and bid tabs at a minimum.
- Prepare a portfolio or list of related projects and prime and supplier references; be sure to note transportation-related projects of similar size and scope, firm expertise and staffing.
- Participate in DBE office assessment programs
- Participate on advisory and mega-project committees
- Sign up to receive the DBE Contracting Update
- Consider membership in relevant industry or contractor organizations
- Active participation is a must. Quote as many projects as you can reasonably work on; quoting the primes and bidding as a prime with the department are the only ways to get work.

# APPENDIX C
## Types of Efforts considered in determining GFE
*This list represents concepts being assessed; analysis requires additional steps*

1. Whether the contractor attended any pre-solicitation or pre-bid meetings that were scheduled by WisDOT to inform DBEs of contracting and subcontracting opportunities;
2. Whether the contractor provided written notice to a reasonable number of specific DBEs that their interest in the contract was being solicited, in sufficient time to allow the DBEs to participate effectively;
3. Whether the contractor followed up initial solicitations of interest by contacting DBEs to determine if the DBEs were interested; returned the phone calls of interested DBE firms.
4. Whether the contractor selected portions of the work to be performed by DBEs in order to increase the likelihood of meeting the DBE goal;
5. Whether the contractor provided interested DBEs with adequate information about the plans, specifications and requirements of the contract;
6. Whether the contractor negotiated in good faith with interested DBEs, not rejected DBEs as unqualified without sound reasons based on a thorough investigation of their capabilities;
7. Whether the contractor made efforts to assist interested DBEs in being more competitive.
8. Whether the contractor effectively used the services of available minority community organizations: minority contractors groups, local, state, and Federal minority business assistance offices, and other organizations that provide assistance to small businesses and DBE firms.
9. Whether Prime used CRCS to identify DBE who specialize in relevant work areas.
10. Whether the contractor used available resources including contacting the DBE office, using WisDOT's website
11. Whether the contractor returned calls of firms expressing interest in a timely manner.

# APPENDIX D
# Good Faith Effort Evaluation Guidance
## *Excerpt from Appendix A of 49 CFR Part 26*

### APPENDIX A TO PART 26 -- GUIDANCE CONCERNING GOOD FAITH EFFORTS

I. When, as a recipient, you establish a contract goal on a DOT assisted contract, a bidder must, in order to be responsible and/or responsive, make good faith efforts to meet the goal. The bidder can meet this requirement in either of two ways. First, the bidder can meet the goal, documenting commitments for participation by DBE firms sufficient for this purpose. Second, even if it doesn't meet the goal, the bidder can document adequate good faith efforts. This means that the bidder must show that it took all necessary and reasonable steps to achieve a DBE goal or other requirement of this part which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to obtain sufficient DBE participation, even if they were not fully successful.

II. In any situation in which you have established a contract goal, part 26 requires you to use the good faith efforts mechanism of this part. As a recipient, it is up to you to make a fair and reasonable judgment whether a bidder that did not meet the goal made adequate good faith efforts. It is important for you to consider the quality, quantity, and intensity of the different kinds of efforts that the bidder has made. The efforts employed by the bidder should be those that one could reasonably expect a bidder to take if the bidder were actively and aggressively trying to obtain DBE participation sufficient to meet the DBE contract goal. Mere pro forma efforts are not good faith efforts to meet the DBE contract requirements. We emphasize, however, that your determination concerning the sufficiency of the firm's good faith efforts is a judgment call: meeting quantitative formulas is not required.

III. The Department also strongly cautions you against requiring that a bidder meet a contract goal (i.e., obtain a specified amount of DBE participation) in order to be awarded a contract, even though the bidder makes an adequate good faith efforts showing. This rule specifically prohibits you from ignoring bona fide good faith efforts.

IV. The following is a list of types of actions which you should consider as part of the bidder's good faith efforts to obtain DBE participation. It is not intended to be a mandatory checklist, nor is it intended to be exclusive or exhaustive. Other factors or types of efforts may be relevant in appropriate cases.

A. Soliciting through all reasonable and available means (e.g. attendance at pre-bid meetings, advertising and/or written notices) the interest of all certified DBEs who have the capability to perform the work of the contract. The bidder must solicit this interest within sufficient time to allow the DBEs to respond to the solicitation. The bidder must determine with certainty if the DBEs are interested by taking appropriate steps to follow up initial solicitations.

B. Selecting portions of the work to be performed by DBEs in order to increase the likelihood that the DBE goals will be achieved. This includes, where appropriate, breaking out contract work items into economically feasible units to facilitate DBE participation, even when the prime contractor might otherwise prefer to perform these work items with its own forces.

C. Providing interested DBEs with adequate information about the plans, specifications, and requirements of the contract in a timely manner to assist them in responding to a solicitation.

D. (1) Negotiating in good faith with interested DBEs. It is the bidder's responsibility to make a portion of the work available to DBE subcontractors and suppliers and to select those portions of the work or material needs consistent with the available DBE subcontractors and suppliers, so as to facilitate DBE participation. Evidence of such negotiation includes the names, addresses, and telephone numbers of DBEs that were considered; a description of the information provided regarding the plans and specifications for the work selected for subcontracting; and evidence as to why additional agreements could not be reached for DBEs to perform the work.

(2) A bidder using good business judgment would consider a number of factors in negotiating with subcontractors, including DBE subcontractors, and would take a firm's price and capabilities as well as contract goals into consideration. However, the fact that there may be some additional costs involved in finding and using DBEs is not in itself sufficient reason for a bidder's failure to meet the contract DBE goal, as long as such costs are reasonable. Also, the ability or desire of a prime contractor to perform the work of a contract with its own organization does not relieve the bidder of the responsibility to make good faith efforts. Prime contractors are not, however, required to accept higher quotes from DBEs if the price difference is excessive or unreasonable.

E. Not rejecting DBEs as being unqualified without sound reasons based on a thorough investigation of their capabilities. The contractor's standing within its industry, membership in specific groups, organizations, or associations and political or social affiliations (for example union vs. non-union employee status) are not legitimate causes for the rejection or non solicitation of bids in the contractor's efforts to meet the project goal.

F. Making efforts to assist interested DBEs in obtaining bonding, lines of credit, or insurance as required by the recipient or contractor.

G. Making efforts to assist interested DBEs in obtaining necessary equipment, supplies, materials, or related assistance or services.

H. Effectively using the services of available minority/women community organizations; minority/women contractors' groups; local, state, and Federal minority/women business assistance offices; and other organizations as allowed on a case-by-case basis to provide assistance in the recruitment and placement of DBEs.

V. In determining whether a bidder has made good faith efforts, you may take into account the performance of other bidders in meeting the contract. For example, when the apparent successful bidder fails to meet the contract goal, but others meet it, you may reasonably raise the question of whether, with additional reasonable efforts, the apparent successful bidder could have met the goal. If the apparent successful bidder fails to meet the goal, but meets or exceeds the average DBE participation obtained by other bidders, you may view this, in conjunction with other factors, as evidence of the apparent successful bidder having made good faith efforts.

# Appendix E
# Small Business Network [SBN] Overview

The Small Business Network is a part of the Bid Express® service that was created to ensure that prime bidders have a centralized online location to find subs - including small and disadvantaged business enterprises (DBEs). It is available for prime bidders to use as part of their Basic Service subscription. Within the Small Business Network, **Prime Contractors** can:

1. Easily select proposals, work types and items:
    a. After adding applicable work types, select items that you wish to quote. Enter the sub-quote quantities and add comments, if desired. Adding or removing items and work types can be done quickly. If needed, you can save the sub-quote for completion at a later time.
2. Create sub-quotes for the subcontracting community:
    a. Create sub-quotes with ease using the intuitive sub-quote creator. In seven short steps, you can rapidly create a custom sub-quote directed to all subcontractors that bid on the applicable work types. Steps include: provide contact information and sub-quote expiration date, select letting and proposal, add work types and items, specify terms and conditions, upload attachments, and select vendors.
    b. Create a sub-quote to send to subcontractors or suppliers that lists the items in a proposal that you want quoted
    c. Create an unlimited number of sub-quotes for items you want quoted, and optionally mark them as a DBE-preferred request
    d. Add attachments to sub-quotes
3. View sub-quote requests & responses:
    a. After logging into the Bid Express service, you can quickly review all of your sub-quote requests and all unsolicited sub-quote requests from subcontractors. To simplify the Small Business Network home screen, sub-quote requests can be hidden with one click if they are not applicable.
    b. View or receive unsolicited sub-quotes that subcontractors have posted, complete with terms, conditions and pricing
4. View Record of Subcontractor Outreach Effort:
    a. For each sub-quote produced, a *Record of Subcontractor Outreach Effort* is generated that shows the response statistics for a particular sub-quote. If accepted by the letting agency, this report may serve as proof of a "Good Faith" effort in reaching out to the DBE community.
    b. Easily locate pre-qualified and certified small and disadvantaged businesses
    c. Advertise to small and disadvantaged businesses more efficiently and cost effectively
    d. Document your interactions with subs/DBEs by producing an Outreach Report (may be accepted as proof of DBE outreach at the discretion of each agency)

The Small Business Network is a part of the Bid Express® service that was created to ensure that small businesses have a centralized area to access information about upcoming projects. It can help small businesses learn more about opportunities, compete more effectively, network with other contractors and subcontractors, and win more jobs.

1. View and reply to sub-quote requests from primes:
    a. After logging into the Bid Express service, you can quickly review all incoming sub-quote requests and all unsolicited sub-quotes created by your company. Receive notifications by selected work type. To simplify on the Small Business Network home screen, sub-quote requests can be filtered by work types relevant to your interests, or hidden with one click if they are not applicable.
2. Select items when responding to sub-quote requests from primes:
    a. You have the freedom to choose and price any number of items when responding to a sub-quote request. Quantities can be modified, and per-item comments are also available.
    b. View requests for sub-quotes for work that primes have posted for projects they are bidding, add your pricing, terms, and conditions, and submit completed sub-quotes to the requesting primes
    c. Add attachments to a sub-quote
3. Create and send unsolicited sub-quotes to specific contractors:
    a. Create unsolicited sub-quotes with ease using the intuitive sub-quote creator. In eight short steps, you can rapidly create a custom sub-quote directed at any number of specific vendors of your choosing. Steps include: provide contact information and sub-quote expiration date, select letting and proposal, add work types and items, specify terms and conditions, upload attachments, and select vendors.
4. Easily select and price items for unsolicited sub-quotes:
    a. After adding applicable work types, select items that you wish to quote. The extended price calculates automatically, cutting out costly calculation errors. Comments can be provided on an per-item basis as well.
    b. Create an unsolicited sub-quote that lists the items from a proposal that you want to quote, include pricing, terms and conditions, and send it to selected prime/plan holder
    c. Add attachments to a sub-quote
    d. Add unsolicited work items to sub-quotes that you are responding to
5. Easy Access to Valuable Information
    a. Receive a confirmation that your sub-quote was opened by a prime
    b. View Bid Tab Analysis data from past bids, including the high, average and low prices of items.
    c. View important notices and publications from DOT targeted to small and disadvantaged businesses
6. Accessing Small Business Network for WisDOT contracting opportunities
    a. If you are a contractor not yet subscribing to the Bid Express service, go to **www.bidx.com** and select "Order Bid Express." The Small Business Network is a part of the Bid Express Basic Service.
    b. DBE firms can request a Bid Express Small Business Network Account at no cost by calling 414-438-4588

# ADDITIONAL SPECIAL PROVISION 4

## Payment to First-Tier Subcontractors

Within 10 calendar days of receiving a progress payment for work completed by a subcontractor, pay the subcontractor for that work. The prime contractor may withhold payment to a subcontractor if, within 10 calendar days of receipt of that progress payment, the prime contractor provides written notification to the subcontractor and the department documenting "just cause" for withholding payment.

The prime contractor may also withhold routine retainage from payments due subcontractors.

## Payment to Lower-Tier Subcontractors

Ensure that subcontracting agreements at all tiers provide prompt payment rights to lower-tier subcontractors that parallel those granted first-tier subcontractors in this provision.

## Release of Routine Retainage

After granting substantial completion the department may reduce the routine retainage withheld from the prime contractor to 75 percent of the original total amount retained.

When the Department sends the semi-final estimate the department may reduce the routine retainage withheld from the prime contractor to 10 percent of the original total amount retained.

Within 30 calendar days of receiving the semi-final estimate from the department, submit written certification that subcontractors at all tiers are paid in full for acceptably completed work and that no routine retainage is being withheld. The department will pay the prime contractor in full and reduce the routine retainage withheld from the prime contractor to zero when the department approves the final estimate.

This special provision does not limit the right of the department, prime contractor, or subcontractors at any tier to withhold payment for work not acceptably completed or work subject to an unresolved contract dispute.

# ADDITIONAL SPECIAL PROVISIONS 5

## Fuel Cost Adjustment

### A Description

Fuel Cost Adjustments will be applied to partial and final payments for work items categorized in Section B as a payment to the contractor or a credit to the department. ASP-5 shall not apply to any force account work.

### B Categories of Work Items

The following items and Fuel Usage Factors shall be used to determine Fuel Cost Adjustments:

| (1) Earthwork. | | Unit | Gal. Fuel Per Unit |
|---|---|---|---|
| 205.0100 | Excavation Common | CY | 0.23 |
| 205.0200 | Excavation Rock | CY | 0.39 |
| 205.0400 | Excavation Marsh | CY | 0.29 |
| 208.0100 | Borrow | CY | 0.23 |
| 208.1100 | Select Borrow | CY | 0.23 |
| 209.0100 | Backfill Granular | CY | 0.23 |
| 350.0102 | Subbase | CY | 0.28 |
| 350.0104 | Subbase | Ton | 0.14 |
| 350.0115 | Subbase 6-Inch | SY | 0.05 |
| 350.0120 | Subbase 7-Inch | SY | 0.05 |
| 350.0125 | Subbase 8-Inch | SY | 0.06 |
| 350.0130 | Subbase 9-Inch | SY | 0.07 |
| 350.0135 | Subbase 10-Inch | SY | 0.08 |
| 350.0140 | Subbase 11-Inch | SY | 0.09 |
| 350.0145 | Subbase 12-Inch | SY | 0.09 |
| SPV.0035.0100 | EBS Excavation | CY | 0.23 |

### C Fuel Index

A Current Fuel Index (CFI) in dollars per gallon will be established by the Department of Transportation for each month. The CFI will be the price of No. 2 fuel oil, as reported in U.S. Oil Week, using the first issue dated that month. The CFI will be the average of prices quoted for Green Bay, Madison, Milwaukee and Minneapolis.

The base Fuel Index (BFI) for this contract is $2.50 per gallon.

**D Computing the Fuel Cost Adjustment**

The engineer will compute the ratio CFI/BFI each month. If the ratio falls between 0.85 and 1.15, inclusive, no fuel adjustment will be made for that month. If the ratio is less than 0.85 a credit to the department will be computed. If the ratio is greater than 1.15 additional payment to the contractor will be computed. Credit or additional payment will be computed as follows:

(1) The engineer will estimate the quantity of work done in that month under each of the contract items categorized in Section B.

(2) The engineer will compute the gallons of fuel used in that month for each of the contract items categorized in Section B by applying the unit fuel usage factors shown in Section B.

(3) The engineer will summarize the total gallons (Q) of fuel used in that month for the items categorized in Section B.

(4) The engineer will determine the Fuel Cost Adjustment credit or payment from the following formula:

$$FA = \left( \frac{CFI}{BFI} - 1 \right) x\ Q\ x\ BFI$$

(plus is payment to contractor; minus is credit to the department)

| | | | |
|---|---|---|---|
| Where | FA | = | Fuel Cost Adjustment (plus or minus) |
| | CFI | = | Current Fuel Index |
| | BFI | = | Base Fuel Index |
| | Q | = | Monthly total gallons of fuel |

**E Payment**

A Fuel Cost Adjustment credit to the department will be deducted as a dollar amount each month from any sums due to the contractor. A Fuel Cost Adjustment payment to the contractor will be made as a dollar amount each month.

Upon completion of the work under the contract, any difference between the estimated quantities and the final quantities will be determined. An average CFI, calculated by averaging the CFI for all months that fuel cost adjustment was applied, will be applied to the quantity differences. The average CFI shall be applied in accordance with the procedure set forth in Section D.

# ADDITIONAL SPECIAL PROVISION 6

## ASP 6 - Modifications to the standard specifications

*Make the following revisions to the standard specifications:*

---

**450.3.2.1 General**

*Replace the entire text with the following effective with the January 2015 letting:*

(1) Do not place asphaltic mixture when the air temperature approximately 3 feet above grade, in shade, and away from artificial heat sources is less than 36 F for upper layers or 32 F for lower layers unless the engineer allows in writing. The contractor should place HMA pavement for projects on or north of STH 29 between May 1 and October 15 inclusive and for projects south of STH 29 between April 15 and November 1 inclusive. Notify the engineer at least one business day before paving.

(2) Unless the contract specifies otherwise, conform to the following:

- Keep the road open to all traffic during construction.
- Prepare the existing foundation for treatment as specified in 211.
- Incorporate loose roadbed aggregate as a part of preparing the foundation, in shoulder construction, or dispose of as the engineer approves.

(3) Place asphaltic mixture only on a prepared, firm, and compacted base, foundation layer, or existing pavement substantially surface-dry and free of loose and foreign material. Do not place over frozen subgrade or base, or where the roadbed is unstable.

---

**450.5 Payment**

*Replace the entire text with the following effective with the May 2015 letting:*

(1) All costs of furnishing, maintaining, and operating the truck scale or other weighing equipment and furnishing the weigh tickets are incidental to the contract.

(2) Nonconforming material allowed to remain in place is subject to price adjustment under 105.3.2.

(3) Full-depth sawing to remove integrally placed safety edge where not required is incidental to the contract.

(4) The contractor is responsible for the quality of HMA pavement placed in cold weather. If because of an excusable compensable delay under 108.10.3, the engineer directs the contractor to pave when the temperature is less than 36 F for the upper layer or less than 32 F for lower layers, the department:

- Will relieve the contractor of responsibility for damage and defects the engineer attributes to cold weather paving.
- Will not assess disincentives for density or ride.

---

**455.3.2.1 General**

*Replace the paragraphs one and two with the following effective with the January 2015 letting:*

(1) Apply tack coat only when the air temperature is 32 F or more unless the engineer approves otherwise in writing. Before applying tack coat ensure that the surface is dry and reasonably free of loose dirt, dust, or other foreign matter. Do not apply if weather or surface conditions are unfavorable or before impending rains.

(2) Use tack material of the type and grade the contract specifies. The contractor may, with the engineer's approval, dilute tack material as allowed under 455.2.4. Provide calculations using the asphalt content as-received from the supplier and subsequent contractor dilutions to show that as-placed material has 50 percent or more residual asphalt content. Apply at 0.050 to 0.070 gallons per square yard, after dilution, unless the contract designates otherwise. The engineer may adjust the application rate based on surface conditions. Limit application each day to the area the contractor expects to pave during that day.

### 460.2.2.3 Aggregate Gradation Master Range

*Replace paragraph one with the following effective with the December 2014 letting:*

(1) Ensure that the aggregate blend, including recycled material and mineral filler, conforms to the gradation requirements in table 460-1. The values listed are design limits; production values may exceed those limits.

**TABLE 460-1 AGGREGATE GRADATION MASTER RANGE AND VMA REQUIREMENTS**

| SIEVE | PERCENTS PASSING DESIGNATED SIEVES | | | | | | |
|---|---|---|---|---|---|---|---|
| | NOMINAL SIZE | | | | | | |
| | 37.5 mm | 25.0 mm | 19.0 mm | 12.5 mm | 9.5 mm | SMA 12.5 mm | SMA 9.5 mm |
| 50.0-mm | 100 | | | | | | |
| 37.5-mm | 90 –100 | 100 | | | | | |
| 25.0-mm | 90 max | 90 -100 | 100 | | | | |
| 19.0-mm | ___ | 90 max | 90 -100 | 100 | | 100 | |
| 12.5-mm | ___ | ___ | 90 max | 90 -100 | 100 | 90 - 97 | 100 |
| 9.5-mm | ___ | ___ | ___ | 90 max | 90 -100 | 58 - 72 | 90 - 100 |
| 4.75-mm | ___ | ___ | ___ | ___ | 90 max | 25 - 35 | 35 - 45 |
| 2.36-mm | 15 – 41 | 19 - 45 | 23 - 49 | 28 - 58 | 20 - 65 | 15 - 25 | 18 - 28 |
| 75-µm | 0 – 6.0 | 1.0 - 7.0 | 2.0 - 8.0 | 2.0 - 10.0 | 2.0 - 10.0 | 8.0 - 12.0 | 10.0 - 14.0 |
| % MINIMUM VMA | 11.0 | 12.0 | 13.0 | 14.0[1] | 15.0[2] | 16.0 | 17.0 |

[1] 14.5 for E-0.3 and E-3 mixes.

[2] 15.5 for E-0.3 and E-3 mixes.

---

### 460.3.4 Cold Weather Paving

*Add a new subsection as follows effective with the May 2015 letting:*

### 460.3.4 Cold Weather Paving

### 460.3.4.1 Cold Weather Paving Plan

(1) Submit a written cold weather paving plan to the engineer at the preconstruction meeting. In that plan outline material, operational, and equipment changes for paving when the air temperature approximately 3 feet above grade, in shade, and away from artificial heat sources is less than 40 F. Include the following:

- Use a department-accepted HMA mix design that incorporates a warm mix additive from the department's approved products list. Do not use a foaming process that introduces water into the mix.
- Use additional rollers.

(2) Engineer written acceptance is required for the cold weather paving plan. Engineer acceptance of the plan does not relieve the contractor of responsibility for pavement performance except as specified in 450.5(4).

### 460.3.4.2 Cold Weather Paving Operations

(1) Do not place asphaltic mixture when the air temperature approximately 3 feet above grade, in shade, and away from artificial heat sources is less than 40 F unless a valid engineer-accepted cold weather paving plan is in effect.

(2) If the national weather service forecast for the construction area predicts ambient air temperature less than 40 F at the projected time of paving within the next 24 hours, confirm or submit revisions to a previously engineer-accepted cold weather paving plan for engineer validation. Upon validation of the plan, the engineer will allow paving for the next day. Once in effect, pave conforming to the engineer-accepted cold weather paving plan for the balance of that work day or shift regardless of the temperature at the time of paving.

**460.4 Measurement**

*Add paragraph two as follows effective with the January 2015 letting:*

(2) The department will measure HMA Cold Weather Paving by the ton of HMA mixture for pavement placed conforming to an engineer-accepted cold weather paving plan.

---

**460.5.1 General**

*Revise paragraph one as follows effective with the January 2015 letting:*

(1) The department will pay for measured quantities at the contract unit price under the following bid items:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| 460.1100 | HMA Pavement Type E-0.3 | TON |
| 460.1101 | HMA Pavement Type E-1 | TON |
| 460.1103 | HMA Pavement Type E-3 | TON |
| 460.1110 | HMA Pavement Type E-10 | TON |
| 460.1130 | HMA Pavement Type E-30 | TON |
| 460.1132 | HMA Pavement Type E-30X | TON |
| 460.1700 | HMA Pavement Type SMA | TON |
| 460.2000 | Incentive Density HMA Pavement | DOL |
| 460.4000 | HMA Cold Weather Paving | TON |

---

**460.5.2.2 Disincentive for HMA Pavement Density**

*Revise paragraph two as follows effective with the January 2015 letting:*

(2) The department will not assess density disincentives for pavement placed in cold weather because of a department-caused delay as specified in 450.5(4).

---

**460.5.2.4 Cold Weather Paving**

*Add a new subsection as follows effective with the May 2015 letting:*

**460.5.2.4 Cold Weather Paving**

(1) Payment for HMA Cold Weather Paving is full compensation for additional materials and equipment specified for cold weather paving under 460.3.4 including costs for preparing, administering, and following the contractor's cold weather paving plan. The department will not pay for HMA Cold Weather Paving for HMA placed on days when the department is assessing liquidated damages.

(2) If HMA pavement is placed under 460.3.4 and the HMA Cold Weather Paving bid item is not in the contract, the department will pay for the additional costs specified in 460.5.2.4(1) as extra work. The department will pay separately for HMA pavement under the appropriate HMA Pavement bid items.

---

**465.2 Materials**

*Replace paragraph two with the following effective with the December 2014 letting:*

(2) Under the other 465 bid items, the contractor need not submit a mix design. Furnish aggregates mixed with a type AC asphaltic material, except under the Asphaltic Curb bid item furnish PG58-28 asphaltic material. Use coarse and fine mineral aggregates uniformly coated and mixed with the asphaltic material in an engineer-approved mixing plant. The contractor may include reclaimed asphaltic pavement materials in the mixture.

**506.3.2 Shop Drawings**

*Replace the entire text with the following effective with the May 2015 letting:*

(1) Ensure that shop drawings conform to the contract plans and provide additional details, dimensions, computations, and other information necessary for completely fabricating and erecting the work. Include project and structure numbers on each shop drawing sheet.

(2) Check shop drawings and submit electronically to the department for review before beginning fabrication. For primary fabrication items, also certify that shop drawings conform to quality control standards by submitting department form DT2333. Department review does not relieve the contractor from responsibility for errors or omissions on shop drawings.

(3) Shop drawings are part of the contract. The department must approve differences between shop drawings and contract plans. The contractor bears the costs of department-approved substitutions. Do not deviate from or revise drawings without notifying the department and resubmitting revised drawings.

(4) Ensure that the fabricator delivers 3 sets of shop drawings for railroad structures to the railroad company upon contract completion.

## Bid Items Added

*Add the following new bid item effective with the January 2015 letting:*

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| 460.4000 | HMA Cold Weather Paving | TON |

## Errata

*Make the following corrections to the standard specifications:*

**501.3.2.4.4 Water Reducer**

*Correct errata by deleting the reference to footnote 6 for grade D concrete.*

(1) Add a water reducing admixture conforming to 501.2.3. Determine the specific type and rate of use based on the atmospheric conditions, the desired properties of the finished concrete and the manufacturer's recommended rate of use. The actual rate of use shall at least equal the manufacturer's recommended rate, and both the type and rate used require the engineer's approval before use.

**506.5 Payment**

*Correct errata by changing the reference to 506.3.22.*

(9) The department will limit costs for inspections conducted under 506.3.22 to $0.05 per pound of material and deduct costs in excess of that amount from payment due the contractor. The department will determine costs for in-house inspections based on hourly rates for department staff plus overhead and use invoiced costs for contracted-out inspections. The department will administer deductions for the contractor's share of the total inspection cost under the Excess Costs For Fabrication Shop Inspection administrative item.

# ADDITIONAL SPECIAL PROVISION 7

A. Reporting 1st Tier and DBE Payments During Construction

1. Comply with reporting requirements specified in the department's Civil Rights Compliance, Contractor's User Manual, Sublets and Payments.
2. Report payments to all DBE firms within 10 calendar days of receipt of a progress payment by the department or a contractor for work performed, materials furnished, or materials stockpiled by a DBE firm. Report the payment as specified in A(1) for all work satisfactorily performed and for all materials furnished or stockpiled.
3. Report payments to all first tier subcontractor relationships within 10 calendar days of receipt of a progress payment by the department for work performed. Report the payment as specified in A(1) for all work satisfactorily performed.
4. All tiers shall report payments as necessary to comply with the DBE payment requirement as specified in A(2).
5. Require all first tier relationships, DBE firms and all other tier relationships necessary to comply with the DBE payment requirement in receipt of a progress payment by contractor to acknowledge receipt of payment as specified in A(1), (2), (3) and (4).
6. All agreements made by a contractor shall include the provisions in A(1), (2), (3), (4) and (5), and shall be binding on all first tier subcontractor relationships and all contractors and subcontractors utilizing DBE firms on the project.

B. Costs for conforming to this special provision are incidental to the contract.

# ADDITIONAL SPECIAL PROVISION 9
# Electronic Certified Payroll Submittal

(1) Use the department's Civil Rights Compliance System (CRCS) to submit certified payrolls electronically. Details are available online through the department's highway construction contractor information (HCCI) site on the Labor, Wages, and EEO Information page at:

http://wisconsindot.gov/Pages/doing-bus/civil-rights/labornwage/default.aspx

(2) Ensure that all tiers of subcontractors, as well as all trucking firms, submit their weekly certified payrolls electronically through CRCS. These payrolls are due within seven calendar days following the close of the payroll period. Every firm providing physical labor towards completing the project is a subcontractor under this special provision.

(3) Upon receipt of contract execution, promptly make all affected firms aware of the requirements under this special provision and arrange for them to receive CRCS training as they are about to begin payrolls. The department will provide training either in a classroom setting at one of our regional offices or by telephone. Contact Tess Mulrooney at 608-267-4489 to schedule the training.

(4) The department will reject all paper submittals of forms DT-1816 and DT-1929 for information required under this special provision. All costs for conforming to this special provision are incidental to the contract.

(5) Firms wishing to export payroll data from their computer system into CRCS should have their payroll coordinator send several sample electronic files to Tess two months before a payroll needs to be submitted. Not every contractor's payroll system is capable of producing export files. For details, see pages 17-22 of the CRCS System Background Information manual available online on the Labor, Wages, and EEO Information page at:

http://wisconsindot.gov/Documents/doing-bus/civil-rights/labornwage/crcs-payroll-manual.pdf

**REQUIRED CONTRACT PROVISIONS**
**FEDERAL-AID CONSTRUCTION CONTRACTS**

I. General
II. Nondiscrimination
III. Nonsegregated Facilities
IV. Davis-Bacon and Related Act Provisions
V. Contract Work Hours and Safety Standards Act Provisions
VI. Subletting or Assigning the Contract
VII. Safety: Accident Prevention
VIII. False Statements Concerning Highway Projects
IX. Implementation of Clean Air Act and Federal Water Pollution Control Act
X. Compliance with Governmentwide Suspension and Debarment Requirements
XI. Certification Regarding Use of Contract Funds for Lobbying

ATTACHMENTS

A. Employment and Materials Preference for Appalachian Development Highway System or Appalachian Local Access Road Contracts (included in Appalachian contracts only)

## I. GENERAL

1. Form FHWA-1273 must be physically incorporated in each construction contract funded under Title 23 (excluding emergency contracts solely intended for debris removal). The contractor (or subcontractor) must insert this form in each subcontract and further require its inclusion in all lower tier subcontracts (excluding purchase orders, rental agreements and other agreements for supplies or services).

The applicable requirements of Form FHWA-1273 are incorporated by reference for work done under any purchase order, rental agreement or agreement for other services. The prime contractor shall be responsible for compliance by any subcontractor, lower-tier subcontractor or service provider.

Form FHWA-1273 must be included in all Federal-aid design-build contracts, in all subcontracts and in lower tier subcontracts (excluding subcontracts for design services, purchase orders, rental agreements and other agreements for supplies or services). The design-builder shall be responsible for compliance by any subcontractor, lower-tier subcontractor or service provider.

Contracting agencies may reference Form FHWA-1273 in bid proposal or request for proposal documents, however, the Form FHWA-1273 must be physically incorporated (not referenced) in all contracts, subcontracts and lower-tier subcontracts (excluding purchase orders, rental agreements and other agreements for supplies or services related to a construction contract).

2. Subject to the applicability criteria noted in the following sections, these contract provisions shall apply to all work performed on the contract by the contractor's own organization and with the assistance of workers under the contractor's immediate superintendence and to all work performed on the contract by piecework, station work, or by subcontract.

3. A breach of any of the stipulations contained in these Required Contract Provisions may be sufficient grounds for withholding of progress payments, withholding of final payment, termination of the contract, suspension / debarment or any other action determined to be appropriate by the contracting agency and FHWA.

4. Selection of Labor: During the performance of this contract, the contractor shall not use convict labor for any purpose within the limits of a construction project on a Federal-aid highway unless it is labor performed by convicts who are on parole, supervised release, or probation. The term Federal-aid highway does not include roadways functionally classified as local roads or rural minor collectors.

## II. NONDISCRIMINATION

The provisions of this section related to 23 CFR Part 230 are applicable to all Federal-aid construction contracts and to all related construction subcontracts of $10,000 or more. The provisions of 23 CFR Part 230 are not applicable to material supply, engineering, or architectural service contracts.

In addition, the contractor and all subcontractors must comply with the following policies: Executive Order 11246, 41 CFR 60, 29 CFR 1625-1627, Title 23 USC Section 140, the Rehabilitation Act of 1973, as amended (29 USC 794), Title VI of the Civil Rights Act of 1964, as amended, and related regulations including 49 CFR Parts 21, 26 and 27; and 23 CFR Parts 200, 230, and 633.

The contractor and all subcontractors must comply with: the requirements of the Equal Opportunity Clause in 41 CFR 60-1.4(b) and, for all construction contracts exceeding $10,000, the Standard Federal Equal Employment Opportunity Construction Contract Specifications in 41 CFR 60-4.3.

Note: The U.S. Department of Labor has exclusive authority to determine compliance with Executive Order 11246 and the policies of the Secretary of Labor including 41 CFR 60, and 29 CFR 1625-1627. The contracting agency and the FHWA have the authority and the responsibility to ensure compliance with Title 23 USC Section 140, the Rehabilitation Act of 1973, as amended (29 USC 794), and Title VI of the Civil Rights Act of 1964, as amended, and related regulations including 49 CFR Parts 21, 26 and 27; and 23 CFR Parts 200, 230, and 633.

The following provision is adopted from 23 CFR 230, Appendix A, with appropriate revisions to conform to the U.S. Department of Labor (US DOL) and FHWA requirements.

**1. Equal Employment Opportunity:** Equal employment opportunity (EEO) requirements not to discriminate and to take affirmative action to assure equal opportunity as set forth under laws, executive orders, rules, regulations (28 CFR 35, 29 CFR 1630, 29 CFR 1625-1627, 41 CFR 60 and 49 CFR 27) and orders of the Secretary of Labor as modified by the provisions prescribed herein, and imposed pursuant to 23 U.S.C. 140 shall constitute the EEO and specific affirmative action standards for the contractor's project activities under

this contract. The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.) set forth under 28 CFR 35 and 29 CFR 1630 are incorporated by reference in this contract. In the execution of this contract, the contractor agrees to comply with the following minimum specific requirement activities of EEO:

a. The contractor will work with the contracting agency and the Federal Government to ensure that it has made every good faith effort to provide equal opportunity with respect to all of its terms and conditions of employment and in their review of activities under the contract.

b. The contractor will accept as its operating policy the following statement:

"It is the policy of this Company to assure that applicants are employed, and that employees are treated during employment, without regard to their race, religion, sex, color, national origin, age or disability. Such action shall include: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship, pre-apprenticeship, and/or on-the-job training."

**2. EEO Officer:** The contractor will designate and make known to the contracting officers an EEO Officer who will have the responsibility for and must be capable of effectively administering and promoting an active EEO program and who must be assigned adequate authority and responsibility to do so.

**3. Dissemination of Policy:** All members of the contractor's staff who are authorized to hire, supervise, promote, and discharge employees, or who recommend such action, or who are substantially involved in such action, will be made fully cognizant of, and will implement, the contractor's EEO policy and contractual responsibilities to provide EEO in each grade and classification of employment. To ensure that the above agreement will be met, the following actions will be taken as a minimum:

a. Periodic meetings of supervisory and personnel office employees will be conducted before the start of work and then not less often than once every six months, at which time the contractor's EEO policy and its implementation will be reviewed and explained. The meetings will be conducted by the EEO Officer.

b. All new supervisory or personnel office employees will be given a thorough indoctrination by the EEO Officer, covering all major aspects of the contractor's EEO obligations within thirty days following their reporting for duty with the contractor.

c. All personnel who are engaged in direct recruitment for the project will be instructed by the EEO Officer in the contractor's procedures for locating and hiring minorities and women.

d. Notices and posters setting forth the contractor's EEO policy will be placed in areas readily accessible to employees, applicants for employment and potential employees.

e. The contractor's EEO policy and the procedures to implement such policy will be brought to the attention of employees by means of meetings, employee handbooks, or other appropriate means.

**4. Recruitment:** When advertising for employees, the contractor will include in all advertisements for employees the notation: "An Equal Opportunity Employer." All such advertisements will be placed in publications having a large circulation among minorities and women in the area from which the project work force would normally be derived.

a. The contractor will, unless precluded by a valid bargaining agreement, conduct systematic and direct recruitment through public and private employee referral sources likely to yield qualified minorities and women. To meet this requirement, the contractor will identify sources of potential minority group employees, and establish with such identified sources procedures whereby minority and women applicants may be referred to the contractor for employment consideration.

b. In the event the contractor has a valid bargaining agreement providing for exclusive hiring hall referrals, the contractor is expected to observe the provisions of that agreement to the extent that the system meets the contractor's compliance with EEO contract provisions. Where implementation of such an agreement has the effect of discriminating against minorities or women, or obligates the contractor to do the same, such implementation violates Federal nondiscrimination provisions.

c. The contractor will encourage its present employees to refer minorities and women as applicants for employment. Information and procedures with regard to referring such applicants will be discussed with employees.

**5. Personnel Actions:** Wages, working conditions, and employee benefits shall be established and administered, and personnel actions of every type, including hiring, upgrading, promotion, transfer, demotion, layoff, and termination, shall be taken without regard to race, color, religion, sex, national origin, age or disability. The following procedures shall be followed:

a. The contractor will conduct periodic inspections of project sites to insure that working conditions and employee facilities do not indicate discriminatory treatment of project site personnel.

b. The contractor will periodically evaluate the spread of wages paid within each classification to determine any evidence of discriminatory wage practices.

c. The contractor will periodically review selected personnel actions in depth to determine whether there is evidence of discrimination. Where evidence is found, the contractor will promptly take corrective action. If the review indicates that the discrimination may extend beyond the actions reviewed, such corrective action shall include all affected persons.

d. The contractor will promptly investigate all complaints of alleged discrimination made to the contractor in connection with its obligations under this contract, will attempt to resolve such complaints, and will take appropriate corrective action within a reasonable time. If the investigation indicates that the discrimination may affect persons other than the complainant, such corrective action shall include such other persons. Upon completion of each investigation, the contractor will inform every complainant of all of their avenues of appeal.

**6. Training and Promotion:**

a. The contractor will assist in locating, qualifying, and increasing the skills of minorities and women who are

applicants for employment or current employees. Such efforts should be aimed at developing full journey level status employees in the type of trade or job classification involved.

b. Consistent with the contractor's work force requirements and as permissible under Federal and State regulations, the contractor shall make full use of training programs, i.e., apprenticeship, and on-the-job training programs for the geographical area of contract performance. In the event a special provision for training is provided under this contract, this subparagraph will be superseded as indicated in the special provision. The contracting agency may reserve training positions for persons who receive welfare assistance in accordance with 23 U.S.C. 140(a).

c. The contractor will advise employees and applicants for employment of available training programs and entrance requirements for each.

d. The contractor will periodically review the training and promotion potential of employees who are minorities and women and will encourage eligible employees to apply for such training and promotion.

**7. Unions:** If the contractor relies in whole or in part upon unions as a source of employees, the contractor will use good faith efforts to obtain the cooperation of such unions to increase opportunities for minorities and women. Actions by the contractor, either directly or through a contractor's association acting as agent, will include the procedures set forth below:

a. The contractor will use good faith efforts to develop, in cooperation with the unions, joint training programs aimed toward qualifying more minorities and women for membership in the unions and increasing the skills of minorities and women so that they may qualify for higher paying employment.

b. The contractor will use good faith efforts to incorporate an EEO clause into each union agreement to the end that such union will be contractually bound to refer applicants without regard to their race, color, religion, sex, national origin, age or disability.

c. The contractor is to obtain information as to the referral practices and policies of the labor union except that to the extent such information is within the exclusive possession of the labor union and such labor union refuses to furnish such information to the contractor, the contractor shall so certify to the contracting agency and shall set forth what efforts have been made to obtain such information.

d. In the event the union is unable to provide the contractor with a reasonable flow of referrals within the time limit set forth in the collective bargaining agreement, the contractor will, through independent recruitment efforts, fill the employment vacancies without regard to race, color, religion, sex, national origin, age or disability; making full efforts to obtain qualified and/or qualifiable minorities and women. The failure of a union to provide sufficient referrals (even though it is obligated to provide exclusive referrals under the terms of a collective bargaining agreement) does not relieve the contractor from the requirements of this paragraph. In the event the union referral practice prevents the contractor from meeting the obligations pursuant to Executive Order 11246, as amended, and these special provisions, such contractor shall immediately notify the contracting agency.

**8. Reasonable Accommodation for Applicants / Employees with Disabilities:** The contractor must be familiar with the requirements for and comply with the Americans with Disabilities Act and all rules and regulations established there under. Employers must provide reasonable accommodation in all employment activities unless to do so would cause an undue hardship.

**9. Selection of Subcontractors, Procurement of Materials and Leasing of Equipment:** The contractor shall not discriminate on the grounds of race, color, religion, sex, national origin, age or disability in the selection and retention of subcontractors, including procurement of materials and leases of equipment. The contractor shall take all necessary and reasonable steps to ensure nondiscrimination in the administration of this contract.

a. The contractor shall notify all potential subcontractors and suppliers and lessors of their EEO obligations under this contract.

b. The contractor will use good faith efforts to ensure subcontractor compliance with their EEO obligations.

**10. Assurance Required by 49 CFR 26.13(b):**

a. The requirements of 49 CFR Part 26 and the State DOT's U.S. DOT-approved DBE program are incorporated by reference.

b. The contractor or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of DOT-assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the contracting agency deems appropriate.

**11. Records and Reports:** The contractor shall keep such records as necessary to document compliance with the EEO requirements. Such records shall be retained for a period of three years following the date of the final payment to the contractor for all contract work and shall be available at reasonable times and places for inspection by authorized representatives of the contracting agency and the FHWA.

a. The records kept by the contractor shall document the following:

(1) The number and work hours of minority and non-minority group members and women employed in each work classification on the project;

(2) The progress and efforts being made in cooperation with unions, when applicable, to increase employment opportunities for minorities and women; and

(3) The progress and efforts being made in locating, hiring, training, qualifying, and upgrading minorities and women;

b. The contractors and subcontractors will submit an annual report to the contracting agency each July for the duration of the project, indicating the number of minority, women, and non-minority group employees currently engaged in each work classification required by the contract work. This information is to be reported on Form FHWA-1391. The staffing data should represent the project work force on board in all or any part of the last payroll period preceding the end of July. If on-the-job training is being required by special provision, the contractor

will be required to collect and report training data. The employment data should reflect the work force on board during all or any part of the last payroll period preceding the end of July.

**III. NONSEGREGATED FACILITIES**

This provision is applicable to all Federal-aid construction contracts and to all related construction subcontracts of $10,000 or more.

The contractor must ensure that facilities provided for employees are provided in such a manner that segregation on the basis of race, color, religion, sex, or national origin cannot result. The contractor may neither require such segregated use by written or oral policies nor tolerate such use by employee custom. The contractor's obligation extends further to ensure that its employees are not assigned to perform their services at any location, under the contractor's control, where the facilities are segregated. The term "facilities" includes waiting rooms, work areas, restaurants and other eating areas, time clocks, restrooms, washrooms, locker rooms, and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing provided for employees. The contractor shall provide separate or single-user restrooms and necessary dressing or sleeping areas to assure privacy between sexes.

**IV. DAVIS-BACON AND RELATED ACT PROVISIONS**

This section is applicable to all Federal-aid construction projects exceeding $2,000 and to all related subcontracts and lower-tier subcontracts (regardless of subcontract size). The requirements apply to all projects located within the right-of-way of a roadway that is functionally classified as Federal-aid highway. This excludes roadways functionally classified as local roads or rural minor collectors, which are exempt. Contracting agencies may elect to apply these requirements to other projects.

The following provisions are from the U.S. Department of Labor regulations in 29 CFR 5.5 “Contract provisions and related matters” with minor revisions to conform to the FHWA-1273 format and FHWA program requirements.

**1. Minimum wages**

a. All laborers and mechanics employed or working upon the site of the work, will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph 1.d. of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, That the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph 1.b. of this section) and the Davis-Bacon poster (WH–1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

b.(1) The contracting officer shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(i) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(ii) The classification is utilized in the area by the construction industry; and

(iii) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(2) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(3) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Wage and Hour Administrator for determination. The Wage and Hour Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or

will notify the contracting officer within the 30-day period that additional time is necessary.

(4) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs 1.b.(2) or 1.b.(3) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

c. Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

d. If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

**2. Withholding**

The contracting agency shall upon its own action or upon written request of an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract, or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the contracting agency may, after written notice to the contractor, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

**3. Payrolls and basic records**

a. Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

b.(1) The contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the contracting agency. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead the payrolls shall only need to include an individually identifying number for each employee ( e.g. , the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH–347 is available for this purpose from the Wage and Hour Division Web site at http://www.dol.gov/esa/whd/forms/wh347instr.htm or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the contracting agency for transmission to the State DOT, the FHWA or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the contracting agency..

(2) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(i) That the payroll for the payroll period contains the information required to be provided under §5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under §5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;

(ii) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

(iii) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(3) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH–347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph 3.b.(2) of this section.

(4) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

c. The contractor or subcontractor shall make the records required under paragraph 3.a. of this section available for inspection, copying, or transcription by authorized representatives of the contracting agency, the State DOT, the FHWA, or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the FHWA may, after written notice to the contractor, the contracting agency or the State DOT, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

**4. Apprentices and trainees**

a. Apprentices (programs of the USDOL).

Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice.

The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed.

Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination.

In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

b. Trainees (programs of the USDOL).

Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration.

The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration.

Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed.

In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

c. Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

d. Apprentices and Trainees (programs of the U.S. DOT).

Apprentices and trainees working under apprenticeship and skill training programs which have been certified by the Secretary of Transportation as promoting EEO in connection with Federal-aid highway construction programs are not subject to the requirements of paragraph 4 of this Section IV. The straight time hourly wage rates for apprentices and trainees under such programs will be established by the particular programs. The ratio of apprentices and trainees to journeymen shall not be greater than permitted by the terms of the particular program.

**5. Compliance with Copeland Act requirements.** The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

**6. Subcontracts.** The contractor or subcontractor shall insert Form FHWA-1273 in any subcontracts and also require the subcontractors to include Form FHWA-1273 in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

**7. Contract termination: debarment.** A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

**8. Compliance with Davis-Bacon and Related Act requirements.** All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

**9. Disputes concerning labor standards.** Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

**10. Certification of eligibility.**

a. By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

b. No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

c. The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

## V. CONTRACT WORK HOURS AND SAFETY STANDARDS ACT

The following clauses apply to any Federal-aid construction contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the clauses required by 29 CFR 5.5(a) or 29 CFR 4.6. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

**1. Overtime requirements.** No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

**2. Violation; liability for unpaid wages; liquidated damages**. In the event of any violation of the clause set forth in paragraph (1.) of this section, the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (1.) of this section, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (1.) of this section.

**3. Withholding for unpaid wages and liquidated damages.** The FHWA or the contacting agency shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (2.) of this section.

**4. Subcontracts.** The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (1.) through (4.) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (1.) through (4.) of this section.

## VI. SUBLETTING OR ASSIGNING THE CONTRACT

This provision is applicable to all Federal-aid construction contracts on the National Highway System.

1. The contractor shall perform with its own organization contract work amounting to not less than 30 percent (or a greater percentage if specified elsewhere in the contract) of the total original contract price, excluding any specialty items designated by the contracting agency. Specialty items may be performed by subcontract and the amount of any such specialty items performed may be deducted from the total original contract price before computing the amount of work required to be performed by the contractor's own organization (23 CFR 635.116).

a. The term “perform work with its own organization” refers to workers employed or leased by the prime contractor, and equipment owned or rented by the prime contractor, with or without operators. Such term does not include employees or equipment of a subcontractor or lower tier subcontractor, agents of the prime contractor, or any other assignees. The term may include payments for the costs of hiring leased employees from an employee leasing firm meeting all relevant Federal and State regulatory requirements. Leased employees may only be included in this term if the prime contractor meets all of the following conditions:

(1) the prime contractor maintains control over the supervision of the day-to-day activities of the leased employees;
(2) the prime contractor remains responsible for the quality of the work of the leased employees;
(3) the prime contractor retains all power to accept or exclude individual employees from work on the project; and
(4) the prime contractor remains ultimately responsible for the payment of predetermined minimum wages, the submission of payrolls, statements of compliance and all other Federal regulatory requirements.

b. "Specialty Items" shall be construed to be limited to work that requires highly specialized knowledge, abilities, or equipment not ordinarily available in the type of contracting organizations qualified and expected to bid or propose on the contract as a whole and in general are to be limited to minor components of the overall contract.

2. The contract amount upon which the requirements set forth in paragraph (1) of Section VI is computed includes the cost of material and manufactured products which are to be purchased or produced by the contractor under the contract provisions.

3. The contractor shall furnish (a) a competent superintendent or supervisor who is employed by the firm, has full authority to direct performance of the work in accordance with the contract requirements, and is in charge of all construction operations (regardless of who performs the work) and (b) such other of its own organizational resources (supervision, management, and engineering services) as the contracting officer determines is necessary to assure the performance of the contract.

4. No portion of the contract shall be sublet, assigned or otherwise disposed of except with the written consent of the contracting officer, or authorized representative, and such consent when given shall not be construed to relieve the contractor of any responsibility for the fulfillment of the contract. Written consent will be given only after the contracting agency has assured that each subcontract is evidenced in writing and that it contains all pertinent provisions and requirements of the prime contract.

5. The 30% self-performance requirement of paragraph (1) is not applicable to design-build contracts; however, contracting agencies may establish their own self-performance requirements.

## VII. SAFETY: ACCIDENT PREVENTION

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

1. In the performance of this contract the contractor shall comply with all applicable Federal, State, and local laws governing safety, health, and sanitation (23 CFR 635). The contractor shall provide all safeguards, safety devices and protective equipment and take any other needed actions as it determines, or as the contracting officer may determine, to be reasonably necessary to protect the life and health of employees on the job and the safety of the public and to protect property in connection with the performance of the work covered by the contract.

2. It is a condition of this contract, and shall be made a condition of each subcontract, which the contractor enters into pursuant to this contract, that the contractor and any subcontractor shall not permit any employee, in performance of the contract, to work in surroundings or under conditions which are unsanitary, hazardous or dangerous to his/her health or safety, as determined under construction safety and health standards (29 CFR 1926) promulgated by the Secretary of Labor, in accordance with Section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 3704).

3. Pursuant to 29 CFR 1926.3, it is a condition of this contract that the Secretary of Labor or authorized representative thereof, shall have right of entry to any site of contract performance to inspect or investigate the matter of compliance with the construction safety and health standards and to carry out the duties of the Secretary under Section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C.3704).

## VIII. FALSE STATEMENTS CONCERNING HIGHWAY PROJECTS

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

In order to assure high quality and durable construction in conformity with approved plans and specifications and a high degree of reliability on statements and representations made by engineers, contractors, suppliers, and workers on Federal-aid highway projects, it is essential that all persons concerned with the project perform their functions as carefully, thoroughly, and honestly as possible. Willful falsification, distortion, or misrepresentation with respect to any facts related to the project is a violation of Federal law. To prevent any misunderstanding regarding the seriousness of these and similar acts, Form FHWA-1022 shall be posted on each Federal-aid highway project (23 CFR 635) in one or more places where it is readily available to all persons concerned with the project:

18 U.S.C. 1020 reads as follows:

"Whoever, being an officer, agent, or employee of the United States, or of any State or Territory, or whoever, whether a person, association, firm, or corporation, knowingly makes any false statement, false representation, or false report as to the character, quality, quantity, or cost of the material used or to be used, or the quantity or quality of the work performed or to be performed, or the cost thereof in connection with the submission of plans, maps, specifications, contracts, or costs of construction on any highway or related project submitted for approval to the Secretary of Transportation; or

Whoever knowingly makes any false statement, false representation, false report or false claim with respect to the character, quality, quantity, or cost of any work performed or to be performed, or materials furnished or to be furnished, in connection with the construction of any highway or related project approved by the Secretary of Transportation; or

Whoever knowingly makes any false statement or false representation as to material fact in any statement, certificate, or report submitted pursuant to provisions of the Federal-aid Roads Act approved July 1, 1916, (39 Stat. 355), as amended and supplemented;

Shall be fined under this title or imprisoned not more than 5 years or both."

**IX. IMPLEMENTATION OF CLEAN AIR ACT AND FEDERAL WATER POLLUTION CONTROL ACT**

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

By submission of this bid/proposal or the execution of this contract, or subcontract, as appropriate, the bidder, proposer, Federal-aid construction contractor, or subcontractor, as appropriate, will be deemed to have stipulated as follows:

1. That any person who is or will be utilized in the performance of this contract is not prohibited from receiving an award due to a violation of Section 508 of the Clean Water Act or Section 306 of the Clean Air Act.
2. That the contractor agrees to include or cause to be included the requirements of paragraph (1) of this Section X in every subcontract, and further agrees to take such action as the contracting agency may direct as a means of enforcing such requirements.

**X. CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION**

This provision is applicable to all Federal-aid construction contracts, design-build contracts, subcontracts, lower-tier subcontracts, purchase orders, lease agreements, consultant contracts or any other covered transaction requiring FHWA approval or that is estimated to cost $25,000 or more – as defined in 2 CFR Parts 180 and 1200.

1**. Instructions for Certification – First Tier Participants:**

a. By signing and submitting this proposal, the prospective first tier participant is providing the certification set out below.

b. The inability of a person to provide the certification set out below will not necessarily result in denial of participation in this covered transaction. The prospective first tier participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective first tier participant to furnish a certification or an explanation shall disqualify such a person from participation in this transaction.

c. The certification in this clause is a material representation of fact upon which reliance was placed when the contracting agency determined to enter into this transaction. If it is later determined that the prospective participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the contracting agency may terminate this transaction for cause of default.

d. The prospective first tier participant shall provide immediate written notice to the contracting agency to whom this proposal is submitted if any time the prospective first tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

e. The terms "covered transaction," "debarred," "suspended," "ineligible," "participant," "person," "principal," and "voluntarily excluded," as used in this clause, are defined in 2 CFR Parts 180 and 1200. “First Tier Covered Transactions” refers to any covered transaction between a grantee or subgrantee of Federal funds and a participant (such as the prime or general contract). “Lower Tier Covered Transactions” refers to any covered transaction under a First Tier Covered Transaction (such as subcontracts). “First Tier Participant” refers to the participant who has entered into a covered transaction with a grantee or subgrantee of Federal funds (such as the prime or general contractor). “Lower Tier Participant” refers any participant who has entered into a covered transaction with a First Tier Participant or other Lower Tier Participants (such as subcontractors and suppliers).

f. The prospective first tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.

g. The prospective first tier participant further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transactions," provided by the department or contracting agency, entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions exceeding the $25,000 threshold.

h. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any lower tier prospective participants, each participant may, but is not required to, check the Excluded Parties List System website (https://www.epls.gov/), which is compiled by the General Services Administration.

i. Nothing contained in the foregoing shall be construed to require the establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of the prospective participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

j. Except for transactions authorized under paragraph (f) of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.

* * * * *

**2. Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – First Tier Participants:**

a. The prospective first tier participant certifies to the best of its knowledge and belief, that it and its principals:

(1) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency;

(2) Have not within a three-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;

(3) Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph (a)(2) of this certification; and

(4) Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.

b. Where the prospective participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

2. **Instructions for Certification - Lower Tier Participants:**

(Applicable to all subcontracts, purchase orders and other lower tier transactions requiring prior FHWA approval or estimated to cost $25,000 or more - 2 CFR Parts 180 and 1200)

a. By signing and submitting this proposal, the prospective lower tier is providing the certification set out below.

b. The certification in this clause is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective lower tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department, or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

c. The prospective lower tier participant shall provide immediate written notice to the person to which this proposal is submitted if at any time the prospective lower tier participant learns that its certification was erroneous by reason of changed circumstances.

d. The terms "covered transaction," "debarred," "suspended," "ineligible," "participant," "person," "principal," and "voluntarily excluded," as used in this clause, are defined in 2 CFR Parts 180 and 1200. You may contact the person to which this proposal is submitted for assistance in obtaining a copy of those regulations. “First Tier Covered Transactions” refers to any covered transaction between a grantee or subgrantee of Federal funds and a participant (such as the prime or general contract). “Lower Tier Covered Transactions” refers to any covered transaction under a First Tier Covered Transaction (such as subcontracts). “First Tier Participant” refers to the participant who has entered into a covered transaction with a grantee or subgrantee of Federal funds (such as the prime or general contractor). “Lower Tier Participant” refers any participant who has entered into a covered transaction with a First Tier Participant or other Lower Tier Participants (such as subcontractors and suppliers).

e. The prospective lower tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency with which this transaction originated.

f. The prospective lower tier participant further agrees by submitting this proposal that it will include this clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transaction," without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions exceeding the $25,000 threshold.

g. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any lower tier prospective participants, each participant may, but is not required to, check the Excluded Parties List System website (https://www.epls.gov/), which is compiled by the General Services Administration.

h. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

i. Except for transactions authorized under paragraph e of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the

department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

* * * * *

**Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion--Lower Tier Participants:**

1. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency.

2. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

* * * * *

**XI. CERTIFICATION REGARDING USE OF CONTRACT FUNDS FOR LOBBYING**

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts which exceed $100,000 (49 CFR 20).

1. The prospective participant certifies, by signing and submitting this bid or proposal, to the best of his or her knowledge and belief, that:

a. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

b. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.

2. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by 31 U.S.C. 1352. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

3. The prospective participant also agrees by submitting its bid or proposal that the participant shall require that the language of this certification be included in all lower tier subcontracts, which exceed $100,000 and that all such recipients shall certify and disclose accordingly.

**ATTACHMENT A - EMPLOYMENT AND MATERIALS PREFERENCE FOR APPALACHIAN DEVELOPMENT HIGHWAY SYSTEM OR APPALACHIAN LOCAL ACCESS ROAD CONTRACTS**

This provision is applicable to all Federal-aid projects funded under the Appalachian Regional Development Act of 1965.

1. During the performance of this contract, the contractor undertaking to do work which is, or reasonably may be, done as on-site work, shall give preference to qualified persons who regularly reside in the labor area as designated by the DOL wherein the contract work is situated, or the subregion, or the Appalachian counties of the State wherein the contract work is situated, except:

a. To the extent that qualified persons regularly residing in the area are not available.

b. For the reasonable needs of the contractor to employ supervisory or specially experienced personnel necessary to assure an efficient execution of the contract work.

c. For the obligation of the contractor to offer employment to present or former employees as the result of a lawful collective bargaining contract, provided that the number of nonresident persons employed under this subparagraph (1c) shall not exceed 20 percent of the total number of employees employed by the contractor on the contract work, except as provided in subparagraph (4) below.

2. The contractor shall place a job order with the State Employment Service indicating (a) the classifications of the laborers, mechanics and other employees required to perform the contract work, (b) the number of employees required in each classification, (c) the date on which the participant estimates such employees will be required, and (d) any other pertinent information required by the State Employment Service to complete the job order form. The job order may be placed with the State Employment Service in writing or by telephone. If during the course of the contract work, the information submitted by the contractor in the original job order is substantially modified, the participant shall promptly notify the State Employment Service.

3. The contractor shall give full consideration to all qualified job applicants referred to him by the State Employment Service. The contractor is not required to grant employment to any job applicants who, in his opinion, are not qualified to perform the classification of work required.

4. If, within one week following the placing of a job order by the contractor with the State Employment Service, the State Employment Service is unable to refer any qualified job applicants to the contractor, or less than the number requested, the State Employment Service will forward a certificate to the contractor indicating the unavailability of applicants. Such certificate shall be made a part of the contractor's permanent project records. Upon receipt of this certificate, the contractor may employ persons who do not normally reside in the labor area to fill positions covered by the certificate, notwithstanding the provisions of subparagraph (1c) above.

5. The provisions of 23 CFR 633.207(e) allow the contracting agency to provide a contractual preference for the use of mineral resource materials native to the Appalachian region.

6. The contractor shall include the provisions of Sections 1 through 4 of this Attachment A in every subcontract for work which is, or reasonably may be, done as on-site work.

**SEPTEMBER 2002**

## NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY (EXECUTIVE ORDER 11246)

1. The Offeror's or Bidder's attention is called to the "Employment Practices" and "Equal Opportunity Clause" set forth in the Required Contract Provisions, FHWA 1273.

2. The goals and timetables for minority and female participation expressed in percentage terms for the contractor's aggregate work force in each trade, on all construction work in the covered area, are as follows:

**Goals for Minority Participation for Each Trade:**

| County | % | County | % | County | % |
|---|---|---|---|---|---|
| Adams | 1.7 | Iowa | 1.7 | Polk | 2.2 |
| Ashland | 1.2 | Iron | 1.2 | Portage | 0.6 |
| Barron | 0.6 | Jackson | 0.6 | Price | 0.6 |
| Bayfield | 1.2 | Jefferson | 7.0 | Racine | 8.4 |
| Brown | 1.3 | Juneau | 0.6 | Richland | 1.7 |
| Buffalo | 0.6 | Kenosha | 3.0 | Rock | 3.1 |
| Burnett | 2.2 | Kewaunee | 1.0 | Rusk | 0.6 |
| Calumet | 0.9 | La Crosse | 0.9 | St. Croix | 2.9 |
| Chippewa | 0.5 | Lafayette | 0.5 | Sauk | 1.7 |
| Clark | 0.6 | Langlade | 0.6 | Sawyer | 0.6 |
| Columbia | 1.7 | Lincoln | 0.6 | Shawano | 1.0 |
| Crawford | 0.5 | Manitowoc | 1.0 | Sheboygan | 7.0 |
| Dane | 2.2 | Marathon | 0.6 | Taylor | 0.6 |
| Dodge | 7.0 | Marinette | 1.0 | Trempealeau | 0.6 |
| Door | 1.0 | Marquette | 1.7 | Vernon | 0.6 |
| Douglas | 1.0 | Menominee | 1.0 | Vilas | 0.6 |
| Dunn | 0.6 | Milwaukee | 8.0 | Walworth | 7.0 |
| Eau Claire | 0.5 | Monroe | 0.6 | Washburn | 0.6 |
| Florence | 1.0 | Oconto | 1.0 | Washington | 8.0 |
| Fond du Lac | 1.0 | Oneida | 0.6 | Waukesha | 8.0 |
| Forest | 1.0 | Outagamie | 0.9 | Waupaca | 1.0 |
| Grant | 0.5 | Ozaukee | 8.0 | Waushara | 1.0 |
| Green | 1.7 | Pepin | 0.6 | Winnebago | 0.9 |
| Green Lake | 1.0 | Pierce | 2.2 | Wood | 0.6 |

**Goals for female participation for each trade: 6.9%**

These goals are applicable to all the contractor's construction work, (whether or not it is federal or federally assisted), performed in the covered area. If the contractor performs construction work in the geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the work is actually performed. With regard to this second area, the contractor also is subject to the goals for both its federally involved and nonfederally involved construction.

The contractor's compliance with the Executive Order and the Regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade, and the contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from contractor to contractor or from project to project for the sole purpose of meeting the contractor's goals shall be a violation of the contract, the Executive Order and the Regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

3. The contractor shall provide written notification to the Director of the Office of Federal Contract Compliance Programs within ten (10) working days of award of any construction subcontract in excess of $10,000.00 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address and telephone number of the subcontractor, employer identification number of the subcontractor; estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the subcontract is to be performed.

   As referred to in this section, the Director means:

   Director
   Office of Federal Contract Compliance Programs
   Ruess Federal Plaza
   310 W. Wisconsin Ave., Suite 1115
   Milwaukee, WI 53202

   The "Employer Identification Number" means the Federal Social Security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941.

4. As used in this notice, and in the contract resulting from solicitation, the "covered area" is the county(ies) in Wisconsin to which this proposal applies.

**APRIL 2013**

## ADDITIONAL FEDERAL-AID PROVISIONS

NOTICE TO ALL BIDDERS

To report bid rigging activities call:

**1-800-424-9071**

The U.S. Department of Transportation (DOT) operates the above toll-free "hotline" Monday through Friday, 8:00 a.m. to 5:00 p.m., Eastern Time. Anyone with knowledge of possible bid rigging, bidding collusion, or other fraudulent activities should use the "hotline" to report such activities.

The "hotline" is part of the DOT's continuing effort to identify and investigate highway construction contract fraud and abuse and is operated under the direction of the DOT Inspector General. All information will be treated confidentially and caller anonymity will be respected.

**Effective August 2015 letting**

## BUY AMERICA PROVISION

All steel and iron materials permanently incorporated in this project shall be domestic products and all manufacturing and coating processes for these materials from smelting forward in the manufacturing process must have occurred within the United States. Coating includes epoxy coating, galvanizing, painting and any other coating that protects or enhances the value of a material subject to the requirements of Buy America. The exemption of this requirement is the minimal use of foreign materials if the total cost of such material permanently incorporated in the product does not exceed one-tenth of one percent (1/10 of 1%) of the total contract cost or $2,500.00, whichever is greater. For purposes of this paragraph, the cost is that shown to be the value of the subject products as they are delivered to the project. The contractor shall take actions and provide documentation conforming to CMM 2-28.5 to ensure compliance with this “Buy America” provision.

http://wisconsindot.gov/rdwy/cmm/cm-02-28.pdf

Upon completion of the project certify to the engineer, in writing using department form WS4567, that all steel, iron, and coating processes for steel or iron incorporated into the contract work conform to these "Buy America" provisions. Attach a list of exemptions and their associated costs to the certification form. Department form WS4567 is available at:

http://wisconsindot.gov/rdwy/worksheets/ws4567.doc

**Effective with September 2004 Letting**

# WISCONSIN DEPARTMENT OF TRANSPORTATION
# DIVISION OF HIGHWAYS AND TRANSPORTATION FACILITIES

## SUPPLEMENTAL REQUIRED CONTRACT PROVISIONS

I. Wage Rates, Hours of labor and payment of Wages
II. Payroll Requirements
III. Postings at the Site of the Work
IV. Affidavits
V. Wage Rate Redistribution
VI. Additional Classifications

## I. WAGE RATES, HOURS OF LABOR AND PAYMENT OF WAGES

The schedule of "Minimum Wage Rates" attached hereto and made a part hereof furnishes the prevailing wage rates that have been determined pursuant to Section 103.50 of the Wisconsin Statutes. These wage rates are the minimum required to be paid to the various laborers, workers, mechanics and truck drivers employed by contractors and subcontractors on the construction work embraced by the contract and subject to prevailing hours and wages under Section 103.50, Stats. If necessary to employ laborers, workers, mechanics or truck drivers whose classification is not listed on the schedule, they shall be paid at rates conformable to those listed for similar classifications. Apprentices shall be paid at rates not less than those prescribed in their state indenture contacts.

While the wage rates shown are the minimum rates required by the contract to be paid during its life, this in not a representation that labor can be obtained at these rates. It is the responsibility of bidders to inform themselves as to the local labor conditions and prospective changes or adjustments of wage rates. No increase in the contract price shall be allowed or authorized on account of the payment of wage rates in excess of those listed herein.

Pursuant to Section 103.50 of the Wisconsin Statutes, the prevailing hours of labor have been determined to be up to 10 hours per day and 40 hours per calendar week Monday through Friday. If any laborer, worker, mechanic or truck driver is permitted or required to work more than the prevailing number of hours per day or per calendar week on this contract, they shall be paid for all hours in excess of the prevailing hours at a rate of at least one and one-half (1 1/2) times their hourly rate of pay. All work on Saturday, Sunday and the following holidays is to be paid at time and a half: (1) January 1, (2) the last Monday in May, (3) July 4, (4) the first Monday in September, (5) the fourth Thursday in November, (6) December 25, (7) the day before if January 1, July 4 or December 25 falls on a Saturday and (8) the day following if January 1, July 4 or December 25 falls on a Sunday.

All laborers, workers, mechanics and truck drivers shall be paid unconditionally not less often than once a week. Persons who own and operate their own trucks must receive the prevailing truck driver rate for the applicable type of truck (i.e. 2 axle, 3 or more axle, articulated, eculid or dumptor) he or she operates, plus an agreed upon amount for the use of his or her truck. Every owner-operator MUST be paid separately for their driving and for the use of their truck.

For those projects subject to the requirements of the Davis-Bacon Act, the Secretary of Labor will also have determined "Minimum Wage Rates" for work to be performed under the contract. These rates are, for all or most of the labor, worker, mechanic or truck driver classifications, identical to those established under Section 103.50 of the Wisconsin Statutes. In the event the rates are not identical, the higher of the two rates will govern.

## II. PAYROLL REQUIREMENTS

All contractors and subcontractors must submit weekly Certified Payrolls and Compliance Statement verifying that all laborers, workers, mechanics and truck drivers working on the project have been paid the prevailing wage rates for all work performed under the contract required by Section 103.50 of the Wisconsin Statutes.

## III. POSTINGS AT THE SITE OF THE WORK

In addition to the required postings furnished by the Department, the contractor shall post the following in at least one conspicuous place at the site of work:

a. "NOTICE TO EMPLOYEES," which provides information required to be posted by the provisions of Section 103.50 of the Wisconsin Statutes.

b. A copy of the State of Wisconsin Minimum Wages Rates. (Four pages.)

c. A copy of the contractor's Equal Employment Opportunity Policy.

d. On any project involving federal aid, in addition to the furnished postings, the contractor shall post a copy of the "Davis-Bacon Act, Minimum Wage Rates". (Three pages.)

## IV. WAGE RATE REDISTRIBUTION

The amount specified as the hourly basic rate of pay and the amount(s) specified as the fringe benefit contribution(s), for all classes of laborers, workers, mechanics or truck drivers may be redistributed, when necessary, to conform to those specified in any applicable collective bargaining agreement, provided that both parties to such agreement

request and receive the approval for any such redistribution from both the Department of Transportation and the Department of Workforce Development prior to the implementation of such redistribution.

## V. ADDITIONAL CLASSIFICATIONS

Any unlisted laborer or mechanic classification that is needed to perform work on this project, and is not included within the scope of any of the classifications listed in the application prevailing wage rate determination, may be added after award only if all of the following criteria have been met:

1. The affected employer(s) must make a written request to WisDOT Central Office to utilize the unlisted classification on this project.

2. The request must indicate the scope of the work to be performed by the unlisted classification and must indicate the proposed wage/fringe benefit package that the unlisted classification is to receive.

3. The work to be performed by the unlisted classification must not be performed by a classification that is included in the applicable prevailing wage rate determination.

4. The unlisted classification must be commonly employed in the area where the project is located.

5. The proposed wage/fringe benefit package must bear a reasonable relationship to those set forth in the applicable prevailing wage rate determination.

6. The request should be made prior to the actual performance of the work by the unlisted classification.

7. DWD must approve the use of the unlisted classification and the proposed wage/fringe benefit package. USDOL also must approve the use of the unlisted classification and the proposed wage/fringe benefit package on federal aid projects.

8. WisDOT and DWD may amend the proposed wage/fringe benefit package, as deemed necessary, and may set forth specific employment ratios and scope of work requirements in the approval document.

The approved wage/fringe benefit package shall be paid to all laborers, workers, mechanics or truck drivers performing work within the scope of that performed by the unlisted classification, from the first day on which such work is performed. In the event that work is performed by the unlisted classification prior to approval, the wage/fringe benefit package to be paid for such work must be in conformance with the wage/fringe

benefit package approved for such work. Under this arrangement a retroactive adjustment in wages and/or fringe benefits may be required to be made to the affected laborers, workers, mechanics or truck drivers by the affected employer(s).

**ANNUAL PREVAILING WAGE RATE DETERMINATION**
**FOR ALL STATE HIGHWAY PROJECTS**
**MILWAUKEE COUNTY**

Compiled by the State of Wisconsin - Department of Workforce Development
for the Department of Transportation
Pursuant to s. 103.50, Stats.
Issued on May 1, 2015

**CLASSIFICATION:** Contractors are required to call the Department of Workforce Development if there are any questions reqarding the proper trade or classification to be used for any worker on a public works project.

**OVERTIME:** Time and one-half must be paid for all hours worked over 10 hours per day and 40 hours per calendar week and for all hours worked on Saturday, Sunday and the following six (6) holidays: January 1; the last Monday in May; July 4; the 1st Monday in September; the 4th Thursday in November; December 25; the day before if January 1, July 4 or December 25 falls on a Saturday; the day following if January 1, July 4 or December 25 falls on a Sunday.

**FUTURE INCREASE:** If indicated for a specific trade or occupation, the full amount of such increase MUST be added to the "TOTAL" indicated for such trade or occupation on the date(s) such increase(s) becomes effective.

**PREMIUM PAY:** If indicated for a specific trade or occupation, the full amount of such pay MUST be added to the "HOURLY BASIC RATE OF PAY" indicated for such trade or occupation, whenever such pay is applicable.

**SUBJOURNEY:** Wage rates may be available for some of the classifications indicated below. Any employer that desires to use any subjourney classification on a project MUST request the applicable wage rate from the Department of Workforce Development PRIOR to the date such classification is used on such project. Form ERD-10880 is available for this purpose and can be obtained by writing to the Department of Workforce Development, Equal Rights Division, P.O. Box 8928, Madison, WI 53708.

**FEBRUARY 1999**

## NOTICE TO BIDDERS
## WAGE RATE DECISION

The wage rate decision of the Secretary of Labor which has been incorporated in these advertised specifications is incomplete in that the classifications may be omitted from the Secretary of Labor's decision.

Since the bidder is responsible, independently, for ascertaining area practice with respect to the necessity, or lack of necessity, for the use of these classifications in the prosecution of the work contemplated by this project, no inference may be drawn from the omision of these classifications concerning prevailing area practices relative to their use. Further, this omission will not, per se, be construed as establishing any governmental liability for increased labor cost if it is subsequently determined that such classifications are required.

There may be omissions and/or errors in the federal wage rates. The bidder is responsible for evaluating and determining the correct applicable rate. The higher of state or federal rate will apply.

## NOTICE TO ALL CONTRACTORS:

## Federal Wage Rate Addendum #01

## Letting of September 29, 2015

Attached are copies of the revised U.S. Department of Labor Wage Rates that are effective for this proposal in the September 29, 2015 letting. The first page of the attachment are the first page of the county highway wage sheets (Page 1 of 3) and correspond to the affected proposal's county. The last two pages of the attachment are pages 2 and 3 of the highway wage sheets, which are the same for all counties.

The following proposals and counties are affected in the September 29, 2015 letting:

| | |
|---|---|
| 01 Milwaukee | |

The responsibility for notifying potential subcontractors and suppliers of these changes remains with the prime contractors.

Sincerely,

*Mike Coleman*
Proposal Development Specialist
Proposal Management Section

SUPERSEDES DECISION WI20120010
U. S. DEPARTMENT OF LABOR
(DAVIS-BACON ACT, MINIMUM WAGE RATES)

STATE: Wisconsin
GENERAL DECISION NUMBER: WI150010
DATE: August 7, 2015
DESCRIPTION OF WORK: Highways and Airport Runway and Taxiway Construction

| LABORERS CLASSIFICATION: | Basic Hourly Rates | Fringe Benefits |
|---|---|---|
| Group 1: General Laborer; Tree Trimmer; Conduit Layer; Demolition and Wrecking Laborer; Guard Rail, Fence and Bridge Builder; Landscaper, Multiplate Culvert Assembler; Stone Handler; Bituminous Worker (Shoveler, Loader, Utility Man); Batch Truck Dumper; or Cement Handler; Bituminous Worker; (Dumper, Ironer, Smoother, Tamper); Concrete Handler | $27.51 | 19.35 |
| Group 2: Air Tool Operator; Joint Sawer and Filler (Pavement); Vibrator or Tamper Operator (Mechanical Hand Operated); Chain Saw Operator; Demolition Burning Torch Laborer | 27.66 | 19.35 |
| Group 3: Bituminous Worker (Raker and Luteman); Formsetter (Curb, Sidewalk, and Pavement); Strike Off man | 27.86 | 19.35 |
| Group 4: Line and Grade Specialist | 28.01 | 19.35 |
| Group 5: Blaster and Powderman | 28.16 | 19.35 |
| Group 6: Flagperson traffic control person | 24.00 | 19.35 |

CLASSES OF LABORER AND MECHANICS

| | | |
|---|---|---|
| Bricklayer | 35.37 | 18.47 |
| Carpenter | 30.52 | 14.41 |
| Piledriverman | 27.25 | 19.46 |
| Ironworker | 30.77 | 23.96 |
| Cement Mason/Concrete Finisher | 30.69 | 17.53 |
| Electrician | | See Page 3 |
| Line Construction | | |
| Lineman | 40.81 | 32% + 5.00 |
| Heavy Equipment Operator | 38.77 | 32% + 5.00 |
| Equipment Operator | 32.65 | 32% + 5.00 |
| Heavy Groundman Driver | 26.78 | 14.11 |
| Light Groundman Driver | 24.86 | 13.45 |
| Groundsman | 22.45 | 32% + 5.00 |
| Millwrights | 26.32 | 13.98 |
| Painter, Brush | 29.52 | 20.04 |
| Painter, Spray and Sandblaster | 30.27 | 20.04 |
| Painter, Bridge | 29.87 | 20.04 |
| Well Drilling: | | |
| Well Driller | 16.52 | 3.70 |

| Truck Drivers: | Basic Hourly Rates | Fringe Benefits |
|---|---|---|
| 1 & 2 Axles | 25.18 | 18.31 |
| Three or More Axles; Euclids, Dumptor & Articulated, Truck Mechanic | 25.38 | 18.31 |

Notes: Welders receive rate prescribed for craft performing operation to which welding is incidental. Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR, 5.5(a)(1)(ii)). Includes Modification #0 dated January 2, 2015; Modification #1 dated January 16, 2015; Modification #2 dated March 20, 2015; Modification #3 dated April 10, 2015; Modification #4 dated May 22, 2015; Modification #5 dated June 12, 2015;Modification #6 dated June 26, 2015; Modification #7 dated July 31, 2015; Modification #8 dated August 7, 2015.

## NOTICE TO ALL CONTRACTORS:

## Federal Wage Rate Addendum #02

## Letting of September 29, 2015

Attached are copies of the revised U.S. Department of Labor Wage Rates that are effective for this proposal in the September 29, 2015 letting. The first page of the attachment are the first page of the county highway wage sheets (Page 1 of 3) and correspond to the affected proposal's county. The last two pages of the attachment are pages 2 and 3 of the highway wage sheets, which are the same for all counties.

The following proposals and counties are affected in the September 29, 2015 letting:

| | |
|---|---|
| 01 Milwaukee | |

The responsibility for notifying potential subcontractors and suppliers of these changes remains with the prime contractors.

Sincerely,

*Mike Coleman*
Proposal Development Specialist
Proposal Management Section

SUPERSEDES DECISION WI20120010
U. S. DEPARTMENT OF LABOR
(DAVIS-BACON ACT, MINIMUM WAGE RATES)

STATE: Wisconsin
GENERAL DECISION NUMBER: WI150010
DATE: August 28, 2015
DESCRIPTION OF WORK: Highways and Airport Runway and Taxiway Construction

| LABORERS CLASSIFICATION: | Basic Hourly Rates | Fringe Benefits |
|---|---|---|
| Group 1: General Laborer; Tree Trimmer; Conduit Layer; Demolition and Wrecking Laborer; Guard Rail, Fence and Bridge Builder; Landscaper, Multiplate Culvert Assembler; Stone Handler; Bituminous Worker (Shoveler, Loader, Utility Man); Batch Truck Dumper; or Cement Handler; Bituminous Worker; (Dumper, Ironer, Smoother, Tamper); Concrete Handler | $27.51 | 19.35 |
| Group 2: Air Tool Operator; Joint Sawer and Filler (Pavement); Vibrator or Tamper Operator (Mechanical Hand Operated); Chain Saw Operator; Demolition Burning Torch Laborer | 27.66 | 19.35 |
| Group 3: Bituminous Worker (Raker and Luteman); Formsetter (Curb, Sidewalk, and Pavement); Strike Off man | 27.86 | 19.35 |
| Group 4: Line and Grade Specialist | 28.01 | 19.35 |
| Group 5: Blaster and Powderman | 28.16 | 19.35 |
| Group 6: Flagperson traffic control person | 24.00 | 19.35 |

CLASSES OF LABORER AND MECHANICS

| | | |
|---|---|---|
| Bricklayer | 35.37 | 18.47 |
| Carpenter | 30.52 | 14.41 |
| Piledriverman | 27.25 | 19.46 |
| Ironworker | 32.36 | 24.07 |
| Cement Mason/Concrete Finisher | 30.69 | 17.53 |
| Electrician | | See Page 3 |
| Line Construction | | |
| Lineman | 40.81 | 32% + 5.00 |
| Heavy Equipment Operator | 38.77 | 32% + 5.00 |
| Equipment Operator | 32.65 | 32% + 5.00 |
| Heavy Groundman Driver | 26.78 | 14.11 |
| Light Groundman Driver | 24.86 | 13.45 |
| Groundsman | 22.45 | 32% + 5.00 |
| Millwrights | 26.32 | 13.98 |
| Painter, Brush | 29.52 | 20.04 |
| Painter, Spray and Sandblaster | 30.27 | 20.04 |
| Painter, Bridge | 29.87 | 20.04 |
| Well Drilling: | | |
| Well Driller | 16.52 | 3.70 |

| Truck Drivers: | Basic Hourly Rates | Fringe Benefits |
|---|---|---|
| 1 & 2 Axles | 25.18 | 18.31 |
| Three or More Axles; Euclids, Dumptor & Articulated, Truck Mechanic | 25.38 | 18.31 |

Notes: Welders receive rate prescribed for craft performing operation to which welding is incidental. Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR, 5.5(a)(1)(ii)). Includes Modification #0 dated January 2, 2015; Modification #1 dated January 16, 2015; Modification #2 dated March 20, 2015; Modification #3 dated April 10, 2015; Modification #4 dated May 22, 2015; Modification #5 dated June 12, 2015;Modification #6 dated June 26, 2015; Modification #7 dated July 31, 2015; Modification #8 dated August 7, 2015; Modification #9 dated August 28, 2015.

Proposal Development Specialist
Proposal Management Section

**ADDENDUM NO. 01**

**1060-33-81**

**August 17, 2015**

**Special Provisions**

**40. Contract Award and Execution**

*Replace the seventh paragraph with the following:*

The low bidder shall present authentic copies of their BED at the department's office, located at 2424 S. 102nd Street, West Allis, WI by October 2, 2015, at 10:00 AM.

**43. Contractor Document Submittals**

*Replace the first paragraph with the following:*

This special provision describes minimum requirements for submitting project documents to the department.

**405. Expansion Device, B-40-869 & B-40-870.**

**A Description**
This special provision describes furnishing and installing an expansion device in accordance to standard spec 502, as shown on the plans, and as hereinafter provided.

**B Materials**
The minimum thickness of the polychloroprene strip seal shall be ¼-inch for non-reinforced elastomeric glands and 1/8-inch for reinforced glands. Furnish the strip seal gland in lengths suitable for a continuous one-piece installation at each individual expansion joint location. Provide preformed polychloroprene strip seals that conform to the requirements ASTM D3542, and have the following physical properties:

| **Property Requirements** | **Value** | **Test Method** |
|---|---|---|
| Tensile Strength, min. | 2000 psi | ASTM D412 |
| Elongation @ Break, min | 250% | ASTM D412 |
| Hardness, Type A, Durometer | 60 ± 5 pts. | ASTM D2240 |
| Compression Set, 70 hours @212˚F, max. | 35% | D395 Method B Modified |
| Ozone Resistance, after 70 hrs. at 100˚F under 20% Strain with 100 pphm ozone | No Cracks | ASTM D1149 Method A |
| Mass Change in Oil 3 after 70 hr. 212˚F Mass Change, max. | 45% | ASTM D471 |

Install the elastomeric strip seal gland with tools recommended by the manufacturer, and with a lubricant adhesive conforming to the requirements of ASTM D4070.

The manufacturer and model number shall be one of the following approved strip seal expansion device products:

| Manufacturer | Model Number Strip Seal Gland Size* 4-Inch | 5-Inch | 6-Inch |
|---|---|---|---|
| D.S. Brown | SSA2-A2R-400 | SSA2-A2R-XTRA | SSA2-A2R-XTRA |
| R.J. Watson | RJA-RJ400 | RJA-RJ500 | RJA-RJ600 |
| Watson Bowman Acme | A-SE400 | A-SE500 | A-SE800 |
| Commercial Fabricators | A-AS400 | ----- | ----- |

*Expansion device strip seal gland size requirement of 4", 5", and 6" shall be as shown on the plans.

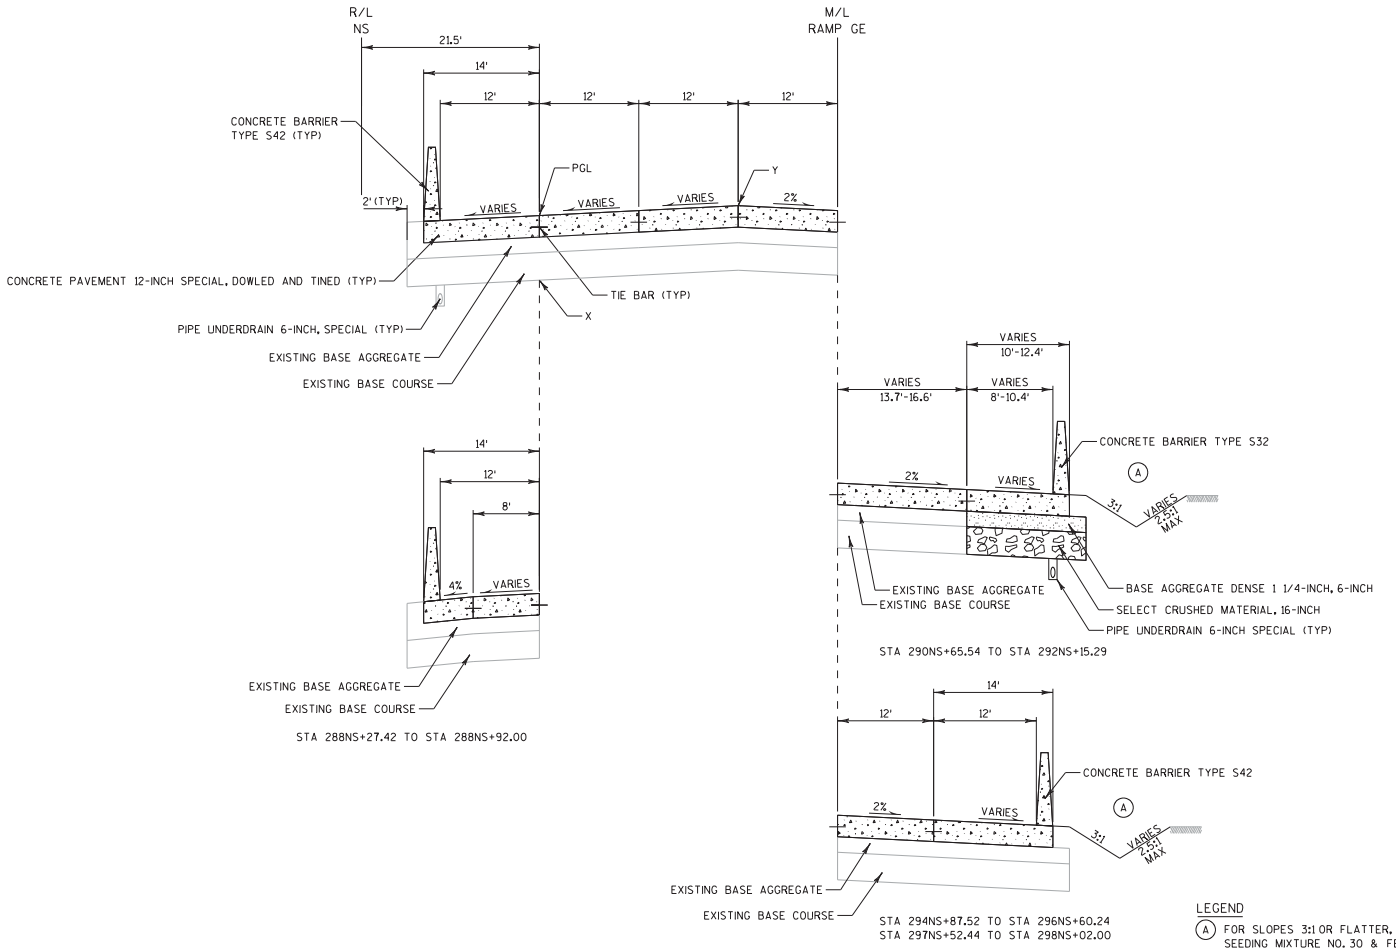
Furnish manufacturer's certification for production of polychloroprene represented showing test results for the cured material supplied, and certifying that it meets all specified requirements.

The steel extrusion or retainer shall conform to ASTM designation A 709 grade 36 steel. After fabrication, steel shall be galvanized conforming to the requirements ASTM A123.

Manufacturer's certifications for adhesive and steel shall attest that the materials meet the specification requirements.
502-020 (20110615)

**406. Steel Sign Bridges**

*Supplement standard spec 641.2.8 with the following:*



Submit shop drawings identified by structure number, design computations, and material specifications, to the engineer before fabrication of steel sign bridges. Provide tightening procedures for mast arm or luminaries arm to pole shaft connections on the shop drawings.

**Schedule of Items**
Attached, dated August 17, 2015, are the revised Schedule of Items Pages 1 – 142.

**Plan Sheets**
The following 8½ x 11-inch sheets are attached and made part of the plans for this proposal:

Revised: 112-113, 129-130, 134, 138-140, 143, 147-148, 159, 167, 170, 189-190, 193-194, 198-199, 208, 216-217, 219-220, 234, 272, 317, 329, 385, 388, 393-394, 400, 654-655, 659-661, 665, 685, 715-716, 718, 720, 722, 725-727, 730-732, 1621, 1661-1665, 1667, 1671-1672, 1806-1808, 1811-1815, 2074, 2082, 2135-2137, 2151, 2154-2155, 3934-3935, 4642-4643, 4648-4649, 4653-4654, 4661-4662, 4706-4707, 4710, 4728-4729, 4735-4737, 4741, 4751-4758, 4765-4767, 4786-4787, 4827-4829, 4840-4841, 5218-5224, 5236-5244, 5473-5480, 5802-5813, 5875-5884, 5904-5916, 5922-5931, 6072-6075, 6199-6202, 6308-6319.
Added: 6680A – 6680AC

**NOTES:**

1) Salvaged/Unsuable Pavement Material is included in Cut.
3) EBS Excavation SPV.00350100 (CY) to be backfilled with EBS Backfill SPV.0035.0101 (CY). EBS Excavation volume assumed as 5% of total roadway area at an average depth of 18-inches, in addition to locations shown in plans. All EBS Excavation to be wasted offsite. EBS Backfill Factor = 1.00.
Actual extents and depths of EBS Excavation will be determined by the engineer in the field.
4) Available Material = Cut - Salvaged/Unusable Pavement Material
5) The backfill needed to construct the mechanically stabilized earth walls has been estimated. The MSE backfill quantity has been subtracted from the fill volume in all end area calculations. The width of the MSE backfill off of the back of the MSE wall has been estimated as 0.8 times the height of the retaining walls.
6) Expanded Fill. Factor = 1.20 Expanded Fill = Unexpanded Fill * Fill Factor
7) The Mass Ordinate + or - Qty calculated for the Division. Plus quantity indicates an excess of material within the Division. Minus indicates a shortage of material within the Division.
8) The storm sewer excavation is estimated to be between 75,000 and 125,000 cubic yards and total structural excavation from all structures is estimated to be between 75,000 and 100,000 cubic yards dependant on the means and methods used for construction. These quantities are not included in this table and should be considered additional waste that is incidental to the storm sewer and structure items.
9) A soil expansion factor of 1.2 was used to generate estimated earthwork quantities. Due to potential soil variability, actual quantities may vary. No quantity adjustments will be made for differing soil expansion factors encountered in the field.

Revised Sheet 3934
August 17, 2015

## GENERAL NOTES

THESE PLANS ARE FOR THE CONCRETE STAINING OF PREVIOUSLY CONSTRUCTED STRUCTURES.

ALL WORK SHALL BE PERFORMED IN ACCORANCE WITH THE SPECIAL PROVISIONS "CONCRETE STAINING PREVIOUSLY CONSTRUCTED STRUCTURE" AND "CONCRETE STAINING MULTI-COLOR PREVIOUSLY CONSTRUCTED STRUCTURE"

FOR STRUCTURE AESTHETIC SHEETS OF PREVIOUSLY CONSTRUCTED STRUCTURES, SEE "FOR INFORMATION ONLY" PLAN SHEETS LOCATED AFTER THE ROADWAY CROSS SECTION SHEETS.

Addendum No. 01
ID 1060-33-81
Revised Sheet 4642
August 17, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

Addendum No. 01
ID 1060-33-81
Revised Sheet 4653
August 17, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

ID 1060-33-81
Revised Sheet 4729
August 17, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

**Division 5 IH 94 EB**

Addendum No. 01
ID 1060-33-81
Revised Sheet 4751
August 17, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

1

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 01
ID 1060-33-81
Revised Sheet 4827
August 17, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

1

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

## DESIGN DATA

LIVE LOAD
DESIGN LOADING: HL-93
INVENTORY RATING FACTOR: RF=1.12
OPERATING RATING FACTOR: RF=1.59
WISCONSIN STANDARD PERMIT VEHICLE(WIS-SPV) = 250 KIPS

THE STRUCTURE IS DESIGNED FOR A FUTURE WEARING SURFACE OF 20 PSF.

ULTIMATE DESIGN STRESSES:
CONCRETE MASONRY SLAB: f'c = 4,000 psi ALL OTHER: f'c = 4,000 psi
BAR STEEL REINFORCEMENT, GRADE 60 ——— fy = 60,000 psi
36W" PRESTRESSED GIRDERS, CONCRETE MASONRY ——— f'c = 9,250 psi
STRANDS - 0.6" DIA. WITH ULTIMATE TENSILE STRENGTH OF 270,000 psi
STRUCTURAL CARBON STEEL ASTM A709 GRADE 36 ——— fy = 36,000 psi
HIGH STRENGTH STRUCTURAL STEEL ASTM A709 GRADE 50 ——— fy = 50,000 psi

## FOUNDATION DATA

ABUTMENTS TO BE SUPPORTED ON 14x73 HP STEEL PILING WITH A REQUIRED DRIVING RESISTANCE OF 230 TONS* PER PILE AS DETERMINED BY THE MODIFIED GATES DYNAMIC EQUATION. ESTIMATED AT 95'-0" LONG.

PIER TO BE SUPPORTED ON 14x73 HP STEEL PILING WITH A REQUIRED DRIVING RESISTANCE OF 200 TONS* PER PILE AS DETERMINED BY THE MODIFIED GATES DYNAMIC EQUATION. ESTIMATED AT 75'-0" LONG.

*THE FACTORED AXIAL RESISTANCE OF PILES IN COMPRESSION USED FOR DESIGN IS THE REQUIRED DRIVING RESISTANCE MULTIPLIED BY A RESISTANCE FACTOR OF 0.5 USING MODIFIED GATES TO DETERMINE DRIVEN PILE CAPACITY.

## GENERAL NOTES

BENDING DIMENSIONS FOR REINFORCING BARS SHOWN ARE OUT-TO-OUT.

BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2" CLEAR UNLESS OTHERWISE SHOWN OR NOTED.

THE REINFORCING BARS SHALL BE EPOXY COATED.

THE FIRST DIGIT OF A THREE DIGIT BAR MARK OR THE FIRST TWO DIGITS OF A FOUR DIGIT BAR MARK SIGNIFY THE BAR SIZE.

THE UTILITY INFORMATION SHOWN ON THESE DRAWINGS CONCERNING THE TYPE AND LOCATION OF EXISTING UTILITY INSTALLATIONS IS NOT GUARANTEED TO BE ACCURATE OR ALL INCLUSIVE. THE CONTRACTOR SHALL MAKE THE DETERMINATION AS TO THE TYPE AND LOCATION OF UNDERGROUND UTILITIES NECESSARY TO AVOID DAMAGE.

INFORMATION ON THESE DRAWINGS RELATING TO THE EXISTING BRIDGE IS BASED UPON DRAWINGS AVAILABLE FROM THE WISCONSIN DEPARTMENT OF TRANSPORTATION. NO GUARANTY OR WARRANTY IS MADE THAT THE INFORMATION IS ALL INCLUSIVE OR COMPLETELY ACCURATE. THE CONTRACTOR SHALL MAKE THE DETERMINATION OF THE ACTUAL CONDITIONS TO BE ENCOUNTERED.

THIS STRUCTURE WILL REPLACE B-40-122 WHICH IS A FOUR-SPAN PRESTRESED CONCRETE GIRDER BRIDGE APPROXIMATELY 202'LONG AND 66'WIDE. SUPPORTED ON CONCRETE ABUTMENTS AND CONCRETE PIERS. THE CONTRACTOR SHALL REMOVE ALL ELEMENTS OF THE EXISTING BRIDGE THAT INTERFERE WITH THE CONSTRUCTION OF THE PROPOSED BRIDGE.

ALL STATIONS AND ELEVATIONS ARE IN FEET.

AT ABUTMENTS ALL EXCAVATED VOLUME NOT OCCUPIED BY THE NEW STRUCTURE SHALL BE BACKFILLED AND PAID FOR UNDER STRUCTURE R-40-580 AND R-40-581.

ALL ELEVATIONS ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM NAVD88 (2007).

DRAWINGS SHALL NOT BE SCALED.

FILLER SHALL CONFORM TO THE REQUIREMENTS OF AASHTO DESIGNATION M153, TYPES I, II OR III; OR AASHTO DESIGNATION M213.

ALL CONTRACTORS EQUIPMENT MUST MAINTAIN THE MINIMUM OSHA CLEARANCE FROM ATC AND WE ENERGIES OVERHEAD FACILITIES AS DESCRIBED IN OSHA'S GUIDELINES FOR CLEARANCES. ALL CONTRACTORS SHOULD INCOPORATE ANY ADDITIONAL COSTS ASSOCIATED WITH WORKING AROUND EXISTING ATC AND WE ENERGIES FACILITIES INTO THEIR BID, AS ATC AND WE ENERGIES BELIEVES THEY DO NOT IMPOSE ANY DIRECT CONFLICTS WITH THE SCOPE OF THIS PROJECT.

FILL/EXCAVATE TO BOTTOM OF THE MSE WALLS AND PIER ELEVATION BEFORE DRIVING PILING.

THE EXISTING GROUND LINE SHALL BE USED AS THE UPPER LIMITS OF EXCAVATION AT THE PIER.

THE HAUNCH CONCRETE QUANTITY IS BASED ON THE AVERAGE HAUNCH SHOWN ON THE PRESTRESSED GIRDER DETAILS SHEET.

PROVIDE A ¾" CHAMFER OR RADIUS ON ALL EXPOSED CONCRETE EDGES.

THE ELASTOMERIC BEARING PADS NON-LAMINATED NEED NOT BE INDIVIDUALLY MOLDED PROVIDED THE CUT EDGES ARE SMOOTH AND TRUE.

PROTECTIVE SURFACE TREATMENT IS TO BE APPLIED TO THE TOP OF THE DECK, TOP OF PARAPETS, TOP OF SIDEWALK, AND FACE OF CURBS.

PILE SPLICES SHALL BE MADE BY A CERTIFIED WELDER.

THE CONTRACTOR MUST COORDINATE THE REMOVAL OF EXISTING STRUCTURE B-40-122 AND CONSTRUCTION OF B-40-884 ABUTMENTS WITH RETAINING WALLS R-40-580 AND R-40-581.

## DESIGN DATA

THE CONTRACTOR SHALL PROVIDE COMPLETE DESIGN, PLANS, DETAILS, SPECIFICATIONS, AND SHOP DRAWINGS FOR THE RETAINING WALLS IN ACCORDANCE WITH THE SPECIAL PROVISIONS. THE RETAINING WALL MANUFACTURER SHALL PROVIDE TECHNICAL ASSISTANCE TO THE CONTRACTOR DURING CONSTRUCTION. THE COST OF FURNISHING THESE ITEMS SHALL BE INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/OMP PILOT".

PLANS, ELEVATIONS AND DETAILS SHOWN ON THESE DRAWINGS ARE INTENDED TO INDICATE WALL LOCATIONS, LENGTHS, HEIGHTS, AND DETAILS COMMON TO THE WALL SYSTEM SELECTED. THE CONTRACTOR SHALL VERIFY THAT THE WALL SYSTEM SELECTED WILL CONFORM TO THE REQUIRED ALIGNMENTS AND DETAILS.

THE RETAINING WALL IS TO BE DESIGNED USING THE ELEVATIONS GIVEN ON THIS SHEET.

THE RETAINING WALL DESIGN SHALL USE THE FUTURE ANTICIPATED FINISHED GROUND LINE ELEVATION TO DETERMINE THE MAXIMUM WALL HEIGHTS.

PROVIDE WALL CORNER DETAILS THAT WILL ALLOW FOR FUTURE EXTENSION OF THE RETAINING WALL PARALLEL TO THE ROADWAY.

DESIGN THE RETAINING WALL IN FRONT OF THE ABUTMENT BODY TO RESIST THE FORCE FROM ALL HORIZONTAL EARTH PRESSURE ACTING ON THE BACK OF THE ABUTMENT BELOW THE BEAM SEATS.

DESIGN THE RETAINING WALL FOR A LIVE LOAD SURCHARGE OF 240 PSF.

THE MAXIMUM VALUE OF THE ANGLE OF INTERNAL FRICTION OF THE WALL BACKFILL MATERIAL IN THE REINFORCED ZONE SHALL BE ASSUMED TO BE 30° WITHOUT CERTIFIED TEST VALUES.

ALLOWABLE WALL SYSTEMS:
WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD

ULTIMATE DESIGN STRESSES:
CONCRETE MASONRY
(PARAPET, SIDEWALK, ANCHOR SLAB AND COPING) f'c = 3,500 PSI
BAR STEEL REINFORCEMENT, GRADE 60 fy = 60,000 PSI

PROPOSED PROFILE GRADE LINE - CLEVELAND AVE.

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2" CLEAR UNLESS OTHERWISE SHOWN OR NOTED.

THE FIRST OR FIRST TWO DIGITS OF A BAR MARK SIGNIFIES THE BAR SIZE.

BEVEL EXPOSED EDGES OF CONCRETE ¾", UNLESS NOTED OTHERWISE.

APPLY PROTECTIVE SURFACE TREATMENT TO THE TOP OF THE CONCRETE PARAPETS, TOP OF SIDEWALKS, FACE OF CURBS AND TOP OF CURB FLANGES.

THE 'E' STATION LINE SIGNIFIES THE WALL ℄ LINE STATIONING ALONG THE FRONT FACE OF R-40-580.

ALL WALL STATIONING AND OFFSETS ARE GIVEN AT THE FRONT FACE OF WALL.

COORDINATE CONSTRUCTION OF THE WALL WITH THE EAST ABUTMENT CONSTRUCTION FOR BRIDGE B-40-884.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING THE LOCATIONS OF ALL EXPANSION AND CONTRACTION JOINTS. LOCATE THE JOINTS TO COINCIDE WITH THE VERTICAL MSE WALL PANEL JOINTS.

THE PLAN QUANTITY FOR THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/OMP PILOT" IS BASED ON A WALL HEIGHT MEASURED FROM THE TOP OF THE WALL TO THE TOP OF THE LEVELING PAD.

THE QUANTITY OF CONCRETE MASONRY FOR THE CAST-IN-PLACE ANCHOR SLAB, SIDEWALK AND PARAPET IS PAID FOR UNDER THE BID ITEM "CONCRETE MASONRY RETAINING WALLS".

THE QUANTITIES AND REINFORCEMENT DETAILS ARE BASED ON AN ASSUMED WALL PANEL THICKNESS OF 5½" AND A 5" PANEL EMBEDMENT. FOR PANEL THICKNESS AND PANEL EMBEDMENT DIFFERENT THAN THESE VALUES, THE CONTRACTOR SHALL VERIFY REINFORCEMENT BAR DETAILS AND QUANTITIES AND WILL BE RESPONSIBLE FOR ANY QUANTITY VARIATIONS.

FILLER SHALL CONFORM TO THE REQUIREMENTS OF AASHTO DESIGNATION M153, TYPES I, II OR III OR M213.

ALL CONTRACTORS EQUIPEMENT MUST MAINTAIN THE MINIMUM OSHA CLEARANCE FROM ATC AND WE ENERGIES OVERHEAD FACILITIES AS DESCRIBED IN OSHA'S GUIDELINES FOR CLEARANCES. ALL CONTRACTORS SHOULD INCORPORATE ANY ADDITIONAL COSTS ASSOCIATED WITH WORKING AROUND EXISTING ATC AND WE ENERGIES FACILITIES INTO THEIR BID. AS ATC AND WE ENERGIES BELIEVE THEY DO NOT IMPOSE ANY DIRECT CONFLICTS WITH THE SCOPE OF THIS PROJECT.

## DESIGN DATA

THE CONTRACTOR SHALL PROVIDE COMPLETE DESIGN, PLANS, DETAILS, SPECIFICATIONS, AND SHOP DRAWINGS FOR THE RETAINING WALLS IN ACCORDANCE WITH THE SPECIAL PROVISIONS. THE RETAINING WALL MANUFACTURER SHALL PROVIDE TECHNICAL ASSISTANCE TO THE CONTRACTOR DURING CONSTRUCTION. THE COST OF FURNISHING THESE ITEMS SHALL BE INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/OMP PILOT".

PLANS, ELEVATIONS AND DETAILS SHOWN ON THESE DRAWINGS ARE INTENDED TO INDICATE WALL LOCATIONS, LENGTHS, HEIGHTS, AND DETAILS COMMON TO THE WALL SYSTEM SELECTED. THE CONTRACTOR SHALL VERIFY THAT THE WALL SYSTEM SELECTED WILL CONFORM TO THE REQUIRED ALIGNMENTS AND DETAILS.

THE RETAINING WALL IS TO BE DESIGNED USING THE ELEVATIONS GIVEN ON THIS SHEET.

THE RETAINING WALL DESIGN SHALL USE THE FUTURE ANTICIPATED FINISHED GROUND LINE ELEVATION TO DETERMINE THE MAXIMUM WALL HEIGHTS.

PROVIDE WALL CORNER DETAILS THAT WILL ALLOW FOR FUTURE EXTENSION OF THE RETAINING WALL PARALLEL TO THE ROADWAY.

DESIGN THE RETAINING WALL IN FRONT OF THE ABUTMENT BODY TO RESIST THE FORCE FROM ALL HORIZONTAL EARTH PRESSURE ACTING ON THE BACK OF THE ABUTMENT BELOW THE BEAM SEATS.

DESIGN THE RETAINING WALL FOR A LIVE LOAD SURCHARGE OF 240 PSF.

THE MAXIMUM VALUE OF THE ANGLE OF INTERNAL FRICTION OF THE WALL BACKFILL MATERIAL IN THE REINFORCED ZONE SHALL BE ASSUMED TO BE 30° WITHOUT CERTIFIED TEST VALUES.

ALLOWABLE WALL SYSTEMS:
WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD

ULTIMATE DESIGN STRESSES:
CONCRETE MASONRY
(PARAPET, SIDEWALK, ANCHOR SLAB AND COPING) f'c = 3,500 PSI
BAR STEEL REINFORCEMENT, GRADE 60 fy = 60,000 PSI

PROPOSED BRIDGE CROSS SECTION

MAIN SPANS 10 & 11
(LOOKING EAST)

PROPOSED BRIDGE CROSS SECTION

APPROACH SPANS 1 - 8 AND 13 - 18
(LOOKING NORTH)

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2" UNLESS OTHERWISE NOTED.

THE FIRST OR FIRST TWO DIGITS OF THE BAR SIGNIFIES THE BAR SIZE.
THE EXISTING GROUND LINE SHALL BE USED AS THE UPPER LIMITS OF EXCAVATION AT THE PIERS AND ABUTMENTS.

AT THE BACKFACE OF ABUTMENT ALL VOLUME WHICH CANNOT BE PLACED BEFORE ABUTMENT CONSTRUCTION AND IS NOT OCCUPIED BY THE NEW STRUCTURE SHALL BE BACKFILLED WITH STRUCTURE BACKFILL.

THE HAUNCH CONCRETE QUANTITY IS BASED ON THE AVERAGE HAUNCH SHOWN ON THE PRESTRESSED GIRDER DETAILS SHEET.

BENDING DIMENSIONS FOR REINFORCING BARS ARE SHOWN ARE OUT-TO-OUT.

THE UTILITY INFORMATION SHOWN ON THESE DRAWINGS CONCERNING THE TYPE AND LOCATION OF EXISTING UTILITY INSTALLATIONS IS NOT GUARANTEED TO BE ACCURATE OR ALL INCLUSIVE. THE CONTRACTOR SHALL MAKE THE DETERMINATION AS TO THE TYPE AND LOCATION OF UNDERGROUND UTILITIES NECESSARY TO AVOID DAMAGE.

INFORMATION ON THESE DRAWINGS RELATING TO THE EXISTING BRIDGE IS BASED UPON DRAWINGS AVAILABLE FROM THE WISCONSIN DEPARTMENT OF TRANSPORTATION. NO GUARANTY OR WARRANTY IS MADE THAT THE INFORMATION IS ALL INCLUSIVE OR COMPLETELY ACCURATE. THE CONTRACTOR SHALL MAKE THE DETERMINATION OF THE ACTUAL CONDITIONS TO BE ENCOUNTERED.

THIS STRUCTURE WILL REPLACE B-40-121 WHICH IS AN 11 SPAN CONTINUOUS FLAT AND HAUNCHED CONCRETE SLAB STRUCTURE APPROXIMATELY 376' LONG AND 10' WIDE, SUPPORTED ON CONCRETE ABUTMENT AND PIERS FOUNDED ON SPREAD FOOTINGS. THE CONTRACTOR SHALL REMOVE ALL ELEMENTS OF THE EXISTING BRIDGE THAT INTERFERE WITH CONSTRUCTION OF THE PROPSED BRIDGE. ALL CONTRACTORS EQUIPEMENT MUST MAINTAIN THE MINIMUM OSHA CLEARANCE FROM ATC AND WE ENERGIES OVERHEAD FACILITIES AS DESCRIBED IN OSHA'S GUIDELINES FOR CLEARANCES. ALL ASSOCIATED WITH WORKING AROUND EXISTING ATC AND WE ENERGIES FACILITIES INTO THEIR BID. AS ATC AND WE ENERGIES BELIEVES THEY DO NOT IMPOSE ANY DIRECT CONFLICTS WITH THE SCOPE OF THIS PROJECT.

DECK ELEVATIONS LISTED ON THE PLANS ARE FIGURED USING A 2.0% CROSS SLOPE.

ALL STATIONS AND ELEVATIONS ARE IN FEET.

STAIN ALL EXPOSED CONCRETE SURFACES ON B-40-889 BASE COLOR A, FEDERAL COLOR NUMBER 33564, EXCEPT AS NOTED BELOW:
-DO NOT STAIN TOP OF DECK, INSIDE OF CURB OR TOP OF CURB
-DO NOT STAIN TOP OF PIER CAPS OR ABUTMENT BEAM SEATS
-DO NOT STAIN THE UNDERSIDE OF DECK BETWEEN PRESTRESSED CONCRETE GIRDERS OR THE INSIDE FACE OF GIRDERS
-STAIN THE EXTERIOR AND BOTTOM FACE OF PRESTRESSED CONCRETE GIRDERS ACCENT COLOR B, FEDERAL COLOR NUMBER 33448

## DESIGN DATA

THE CONTRACTOR SHALL PROVIDE COMPLETE DESIGN, PLANS, DETAILS, SPECIFICATIONS, AND SHOP DRAWINGS FOR THE RETAINING WALLS IN ACCORDANCE WITH THE SPECIAL PROVISIONS. THE RETAINING WALL MANUFACTURER SHALL PROVIDE TECHNICAL ASSISTANCE TO THE CONTRACTOR DURING CONSTRUCTION. THE COST OF FURNISHING THESE ITEMS SHALL BE INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD".

PLANS, ELEVATIONS AND DETAILS SHOWN ON THESE DRAWINGS ARE INTENDED TO INDICATE WALL LOCATIONS, LENGTHS, HEIGHTS, AND DETAILS COMMON TO THE WALL SYSTEM SELECTED. THE CONTRACTOR SHALL VERIFY THAT THE WALL SYSTEM SELECTED WILL CONFORM TO THE REQUIRED ALIGNMENTS AND DETAILS.

THE RETAINING WALL IS TO BE DESIGNED USING THE ELEVATIONS GIVEN ON THIS SHEET.

DESIGN THE RETAINING WALL FOR A LIVE LOAD SURCHARGE OF 100 PSF.

THE MAXIMUM VALUE OF THE ANGLE OF INTERNAL FRICTION OF THE WALL BACKFILL MATERIAL IN THE REINFORCED ZONE SHALL BE ASSUMED TO BE 30° WITHOUT CERTIFIED TEST VALUES.

ALLOWABLE WALL SYSTEMS:
WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD

ULTIMATE DESIGN STRESSES:
CONCRETE MASONRY
(PARAPET, SIDEWALK, ANCHOR SLAB AND COPING) f'c = 3,500 PSI
BAR STEEL REINFORCEMENT, GRADE 60 fy = 60,000 PSI

| FACTORED BEARING RESISTANCE (PSF) | 6,000 | | | | |
| BEARING RESISTANCE (CDR > 1.0) | 2.3 | | | | |
| OVERALL STABILITY (CDR > 1.0) | 1.12 | | | | |

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2" CLEAR UNLESS OTHERWISE SHOWN OR NOTED.

THE FIRST OR FIRST TWO DIGITS OF A BAR MARK SIGNIFIES THE BAR SIZE.

BEVEL EXPOSED EDGES OF CONCRETE ¾", UNLESS NOTED OTHERWISE.

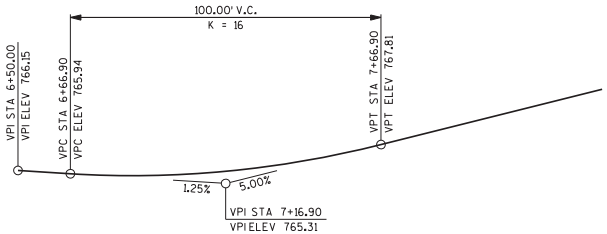
APPLY PROTECTIVE SURFACE TREATMENT TO THE TOP OF THE CONCRETE PATH, FACE OF CURBS AND TOP OF CURBS.

THE 'W614' STATION LINE SIGNIFIES THE WALL ℄ LINE STATIONING ALONG THE FRONT FACE OF R-40-614.

ALL WALL STATIONING AND OFFSETS ARE GIVEN AT THE FRONT FACE OF WALL.

COORDINATE CONSTRUCTION OF THE WALL WITH THE NW ABUTMENT OF OF B-40-889

THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING THE LOCATIONS OF ALL EXPANSION JOINTS. LOCATE THE JOINTS TO COINCIDE WITH THE VERTICAL MSE WALL PANEL JOINTS.



THE PLAN QUANTITY FOR THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD" IS BASED ON A WALL HEIGHT MEASURED FROM THE TOP OF THE WALL TO THE TOP OF THE LEVELING PAD.

THE QUANTITY OF CONCRETE MASONRY FOR THE CAST-IN-PLACE COPING, SLAB, AND CURB IS PAID FOR UNDER THE BID ITEM "CONCRETE MASONRY RETAINING WALLS".

THE QUANTITIES AND REINFORCEMENT DETAILS ARE BASED ON AN ASSUMED WALL PANEL THICKNESS OF 5½" AND A 5" PANEL EMBEDMENT. FOR PANEL THICKNESS AND PANEL EMBEDMENT DIFFERENT THAN THESE VALUES, THE CONTRACTOR SHALL VERIFY REINFORCEMENT BAR DETAILS AND QUANTITIES AND WILL BE RESPONSIBLE FOR ANY QUANTITY VARIATIONS.

FILLER SHALL CONFORM TO THE REQUIREMENTS OF AASHTO DESIGNATION M153, TYPES I, II OR III OR M213.

ALL CONTRACTORS EQUIPEMENT MUST MAINTAIN THE MINIMUM OSHA CLEARANCE FROM ATC AND WE ENERGIES OVERHEAD FACILITIES AS DESCRIBED IN OSHA'S GUIDELINES FOR CLEARANCES. ALL CONTRACTORS SHOULD INCORPORATE ANY ADDITIONAL COSTS ASSOCIATED WITH WORKING AROUND EXISTING ATC AND WE ENERGIES FACILITIES INTO THEIR BID, AS ATC AND WE ENERGIES BELIEVE THEY DO NOT IMPOSE ANY DIRECT CONFLICTS WITH THE SCOPE OF THIS PROJECT.

| GRAY LEAN CLAY AND TRACE SAND, VERY STIFF ELEVATION 761.7 FEET TO 729.7 FEET | 21 | 0 | 130 |

## WALL EXTERNAL AND OVERALL STABILITY EVALUATION

| DIMENSIONS | | | | | |
|---|---|---|---|---|---|
| WALL HEIGHT (FEET)[1] | 11.3 | | | | |
| EXPOSED WALL HEIGHT (FEET)[2] | 7.6 | | | | |
| MINIMUM LENGTH OF REINFORCEMENT (FEET) | 8.0 | | | | |
| WALL STATION | 1+00.00 | | | | |
| BORING USED | D-7 | | | | |
| **CAPACITY TO DEMAND RATIO (CDR)** | | | | | |
| SLIDING (CDR > 1.0) | N/A | | | | |
| ECCENTRICTY (CDR > 1.0) | N/A | | | | |
| FACTORED BEARING RESISTANCE (PSF) | 6,000 | | | | |
| BEARING RESISTANCE (CDR > 1.0) | 2.3 | | | | |
| OVERALL STABILITY (CDR > 1.0) | 1.12 | | | | |

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2" CLEAR UNLESS OTHERWISE SHOWN OR NOTED.

THE FIRST OR FIRST TWO DIGITS OF A BAR MARK SIGNIFIES THE BAR SIZE.

BEVEL EXPOSED EDGES OF CONCRETE ¾", UNLESS NOTED OTHERWISE.

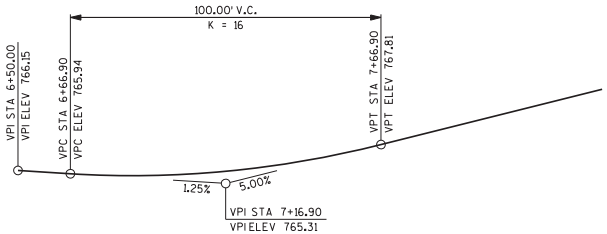
APPLY PROTECTIVE SURFACE TREATMENT TO THE TOP OF THE CONCRETE PATH, FACE OF CURBS AND TOP OF CURBS.

THE 'W615' STATION LINE SIGNIFIES THE WALL ℄ LINE STATIONING ALONG THE FRONT FACE OF R-40-615.

ALL WALL STATIONING AND OFFSETS ARE GIVEN AT THE FRONT FACE OF WALL.

COORDINATE CONSTRUCTION OF THE WALL WITH THE NW ABUTMENT OF OF B-40-889

THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING THE LOCATIONS OF ALL EXPANSION JOINTS. LOCATE THE JOINTS TO COINCIDE WITH THE VERTICAL MSE WALL PANEL JOINTS.



THE PLAN QUANTITY FOR THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD" IS BASED ON A WALL HEIGHT MEASURED FROM THE TOP OF THE WALL TO THE TOP OF THE LEVELING PAD.

THE QUANTITY OF CONCRETE MASONRY FOR THE CAST-IN-PLACE COPING, SLAB, AND CURB IS PAID FOR UNDER THE BID ITEM "CONCRETE MASONRY RETAINING WALLS".

THE QUANTITIES AND REINFORCEMENT DETAILS ARE BASED ON AN ASSUMED WALL PANEL THICKNESS OF 5½" AND A 5" PANEL EMBEDMENT. FOR PANEL THICKNESS AND PANEL EMBEDMENT DIFFERENT THAN THESE VALUES, THE CONTRACTOR SHALL VERIFY REINFORCEMENT BAR DETAILS AND QUANTITIES AND WILL BE RESPONSIBLE FOR ANY QUANTITY VARIATIONS.

FILLER SHALL CONFORM TO THE REQUIREMENTS OF AASHTO DESIGNATION M153, TYPES I, II OR III OR M213.

ALL CONTRACTORS EQUIPEMENT MUST MAINTAIN THE MINIMUM OSHA CLEARANCE FROM ATC AND WE ENERGIES OVERHEAD FACILITIES AS DESCRIBED IN OSHA'S GUIDELINES FOR CLEARANCES. ALL CONTRACTORS SHOULD INCORPORATE ANY ADDITIONAL COSTS ASSOCIATED WITH WORKING AROUND EXISTING ATC AND WE ENERGIES FACILITIES INTO THEIR BID, AS ATC AND WE ENERGIES BELIEVE THEY DO NOT IMPOSE ANY DIRECT CONFLICTS WITH THE SCOPE OF THIS PROJECT.

## DESIGN DATA

THE CONTRACTOR SHALL PROVIDE COMPLETE DESIGN, PLANS, DETAILS, SPECIFICATIONS, AND SHOP DRAWINGS FOR THE RETAINING WALLS IN ACCORDANCE WITH THE SPECIAL PROVISIONS. THE RETAINING WALL MANUFACTURER SHALL PROVIDE TECHNICAL ASSISTANCE TO THE CONTRACTOR DURING CONSTRUCTION. THE COST OF FURNISHING THESE ITEMS SHALL BE INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD".

PLANS, ELEVATIONS AND DETAILS SHOWN ON THESE DRAWINGS ARE INTENDED TO INDICATE WALL LOCATIONS, LENGTHS, HEIGHTS, AND DETAILS COMMON TO THE WALL SYSTEM SELECTED. THE CONTRACTOR SHALL VERIFY THAT THE WALL SYSTEM SELECTED WILL CONFORM TO THE REQUIRED ALIGNMENTS AND DETAILS.

THE RETAINING WALL IS TO BE DESIGNED USING THE ELEVATIONS GIVEN ON THIS SHEET.

DESIGN THE RETAINING WALL FOR A LIVE LOAD SURCHARGE OF 100 PSF.

THE MAXIMUM VALUE OF THE ANGLE OF INTERNAL FRICTION OF THE WALL BACKFILL MATERIAL IN THE REINFORCED ZONE SHALL BE ASSUMED TO BE 30° WITHOUT CERTIFIED TEST VALUES.

ALLOWABLE WALL SYSTEMS;
WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD

ULTIMATE DESIGN STRESSES;
CONCRETE MASONRY
(PARAPET, SIDEWALK, ANCHOR SLAB AND COPING) f'c = 3,500 PSI

| WALL HEIGHT (FEET)[1] | 17.9 | | | | |
| EXPOSED WALL HEIGHT (FEET)[2] | 12.3 | | | | |
| MINIMUM LENGTH OF REINFORCEMENT (FEET) | 11.5 | | | | |
| WALL STATION | 1+00.00 | | | | |
| BORING USED | D-10 | | | | |
| CAPACITY TO DEMAND RATIO (CDR) | | | | | |
| SLIDING (CDR > 1.0) | N/A | | | | |
| ECCENTRICTY (CDR > 1.0) | N/A | | | | |
| FACTORED BEARING RESISTANCE (PSF) | 6,000 | | | | |
| BEARING RESISTANCE (CDR > 1.0) | 1.65 | | | | |
| OVERALL STABILITY (CDR > 1.0) | 1.12 | | | | |

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2" CLEAR UNLESS OTHERWISE SHOWN OR NOTED.

THE FIRST OR FIRST TWO DIGITS OF A BAR MARK SIGNIFIES THE BAR SIZE.

BEVEL EXPOSED EDGES OF CONCRETE ¾", UNLESS NOTED OTHERWISE.

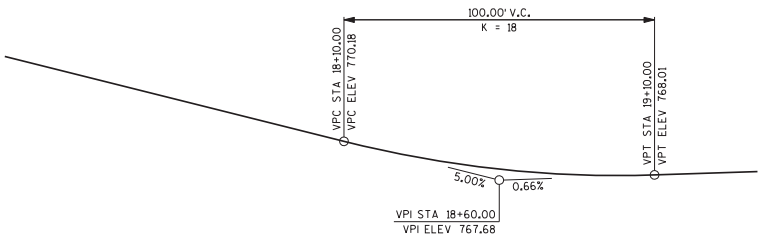
APPLY PROTECTIVE SURFACE TREATMENT TO THE TOP OF THE CONCRETE PATH, FACE OF CURBS AND TOP OF CURBS.

THE 'W617' STATION LINE SIGNIFIES THE WALL ℄ LINE STATIONING ALONG THE FRONT FACE OF R-40-617.

ALL WALL STATIONING AND OFFSETS ARE GIVEN AT THE FRONT FACE OF WALL.

COORDINATE CONSTRUCTION OF THE WALL WITH THE NE ABUTMENT OF OF B-40-889

THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING THE LOCATIONS OF ALL EXPANSION JOINTS. LOCATE THE JOINTS TO COINCIDE WITH THE VERTICAL MSE WALL PANEL JOINTS.



THE PLAN QUANTITY FOR THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD" IS BASED ON A WALL HEIGHT MEASURED FROM THE TOP OF THE WALL TO THE TOP OF THE LEVELING PAD.

THE QUANTITY OF CONCRETE MASONRY FOR THE CAST-IN-PLACE COPING, SLAB, AND CURB IS PAID FOR UNDER THE BID ITEM "CONCRETE MASONRY RETAINING WALLS".

THE QUANTITIES AND REINFORCEMENT DETAILS ARE BASED ON AN ASSUMED WALL PANEL THICKNESS OF 5½" AND A 5" PANEL EMBEDMENT. FOR PANEL THICKNESS AND PANEL EMBEDMENT DIFFERENT THAN THESE VALUES, THE CONTRACTOR SHALL VERIFY REINFORCEMENT BAR DETAILS AND QUANTITIES AND WILL BE RESPONSIBLE FOR ANY QUANTITY VARIATIONS.

FILLER SHALL CONFORM TO THE REQUIREMENTS OF AASHTO DESIGNATION M153, TYPES I, II OR III OR M213.

ALL CONTRACTORS EQUIPEMENT MUST MAINTAIN THE MINIMUM OSHA CLEARANCE FROM ATC AND WE ENERGIES OVERHEAD FACILITIES AS DESCRIBED IN OSHA'S GUIDELINES FOR CLEARANCES. ALL CONTRACTORS SHOULD INCORPORATE ANY ADDITIONAL COSTS ASSOCIATED WITH WORKING AROUND EXISTING ATC AND WE ENERGIES FACILITIES INTO THEIR BID, AS ATC AND WE ENERGIES BELIEVE THEY DO NOT IMPOSE ANY DIRECT CONFLICTS WITH THE SCOPE OF THIS PROJECT.

PROPOSED PROFILE GRADE LINE - DAKOTA STREET PEDESTRIAN BRIDGE

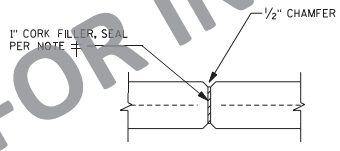
FOR INFORMATION ONLY

| STATE PROJECT NUMBER |
|---|
| 1100-03-79 |

STAIN ALL EXPOSED CONCRETE SURFACES ON R-40-617 BASE COLOR A, FEDERAL COLOR NUMBER 33564, EXCEPT AS FOLLOWS:
-DO NOT STAIN TOP OF SLAB, INSIDE FACE OF CURB OR TOP OF CURB

## TYPICAL SECTION OF SLAB
(LOOKING SOUTH)



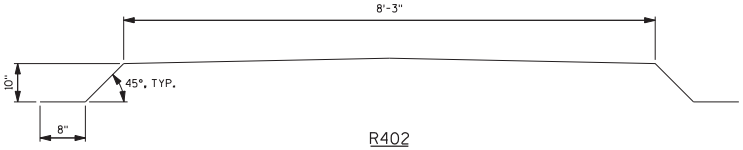
◐ OPTIONAL CONST. JOINT - STRIKE OFF AS SHOWN.
● 1" EXPANDED POLYSTYRENE ***

ALL BAR STEEL IN CAST-IN-PLACE CONCRETE SHALL BE EPOXY COATED.

CONCRETE QUANTITY BASED ON 5" PANEL EMBEDMENT & 5½" PANEL THICKNESS.

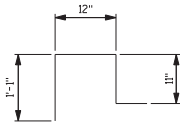
** REFER TO B-40-889 CONDUIT DETAILS FOR EXPANSION FITTING AND BENDING

*** INCIDENTAL TO THE BID ITEM "CONCRETE MASONRY RETAINING WALLS".



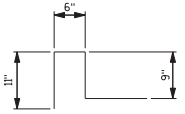
## SLAB & CURB EXPANSION JOINT
DO NOT RUN BAR STEEL THRU JOINT.
MAXIMUM SPACING OF JOINT = 30'
ADJUST BAR R405 LENGTHS TO MATCH JOINT SPACING

‡ SEAL ALL EXPOSED HORIZ. & VERT. SURFACES OF FILLER WITH NON-STAINING GRAY NON-BITUMINOUS JOINT SEALER (1" DEEP AND HOLD ⅛" BELOW SURFACE OF CONC.)



## BILL OF BARS

| BAR MARK | COATED | NO. REQ'D | LENGTH | BENT | BAR SERIES | LOCATION |
|---|---|---|---|---|---|---|
| R401 | X | 74 | 13'-0" | | | SLAB TOP |
| R402 | X | 74 | 11'-11" | ▲ | | SLAB BOTTOM |
| R403 | X | 148 | 3'-6" | ▲ | | SLAB OVER WALL/COPING |
| R404 | X | 148 | 3'-2" | ▲ | | SLAB CURB |
| R405 | X | 19 | 145'-9" | | | SLAB, CURB, COPING LONGITUDINAL |



NOTES:
1. THE FIRST OR FIRST TWO DIGITS OF THE BAR MARK SIGNIFIES THE BAR SIZE.
2. ASSUMED PANEL THICKNESS OF 5 1/2" USED WHEN DETERMINING BAR DIMENSIONS.
3. R405 BARS SHALL BE FABRICATED TO MATCH EXPANSION JOINT SPACING, FIELD CUTTING IS NOT ALLOWED.

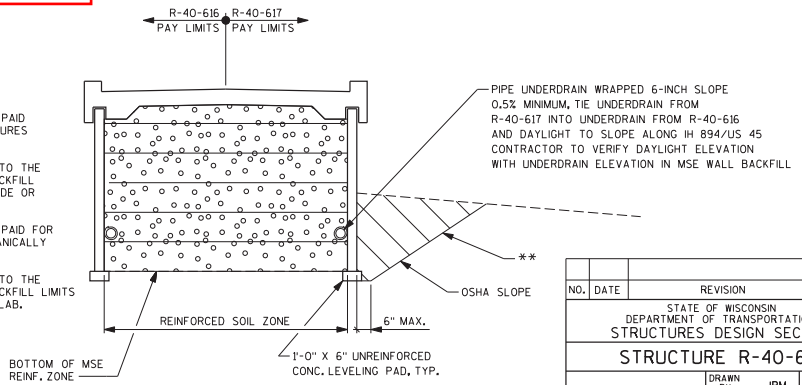
SECTION PARALLEL WITH PEDESTRIAN BRIDGE

LIMITS OF EXCAVATION AND BACKFILL PAID FOR UNDER "EXCAVATION FOR STRUCTURES RETAINING WALLS (R-40-614)"



UPPER EXCAVATION LIMITS SHALL BE TO THE EXISTING GROUND LINE AND UPPER BACKFILL LIMITS SHALL BE TO FINISHED SUBGRADE OR FINISHED GROUND LINE.

LIMITS OF EXCAVATION AND BACKFILL PAID FOR UNDER "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD".

UPPER EXCAVATION LIMITS SHALL BE TO THE EXISTING GROUND LINE AND UPPER BACKFILL LIMITS SHALL BE TO THE BOTTOM OF THE SLAB.

** BACKFILL SHALL BE IN ACCORDANCE WITH SECTION 207 OF THE STANDARD SPECIFICATIONS CONTRACTOR MAY USE EXCAVATED MATERIAL WITH APPROVAL OF THE ENGINEER

| SPV.0060.4116 | Case Pile Wave Analysis Program (CAP/WAP) Evaluation | EACH | 2 | 3 | 55 |

| **Added** Bid Item Quantities | | | | | |
|---|---|---|---|---|---|
| Bid Item | Item Description | Unit | Old Quantity | Revised Quantity | Proposal Total |
| 550.2148 | Piling CIP Concrete 14 X 0.50-Inch | LF | 0 | 1395 | 1395 |
| SPV.0105.0050 | Partially Removing Existing Drilled Shafts | LS | 0 | 1 | 1 |

| **Deleted** Bid Item Quantities | | | | | |
|---|---|---|---|---|---|
| Bid Item | Item Description | Unit | Old Quantity | Revised Quantity | Proposal Total |
| 108.3100.S.0003 | Incentive/Disincentive for Interim Completion of Work Ramp NE | CD | 0.1 | 0 | 0 |

**Plan Sheets**

| **Revised** Plan Sheets | |
|---|---|
| Plan Sheet | Plan Sheet Title (brief description of changes to sheet) |
| 206 | Ramp SA revised to show some work done in previous contract |
| 398 | Removal sheet revised to show Partially Removing Existing Drilled Shaft location |
| 957 | Sign 262R revised |
| 1621 | Quantity sheet revised to show Partially Removing Existing Drilled Shaft location |
| 1664 | Sheet was copied over in Addendum #1 (Sheet 1663 was shown twice) |
| 1924 | Sign 262R revised |
| 2353 | Sign 262R revised |
| 2862 | Restrike revisions |
| 2868 | Restrike revisions |
| 3850 | Temporary Shoring revisions |
| 3852 | Temporary Shoring revisions |

The responsibility for notifying potential subcontractors and suppliers of these changes remains with the prime contractor.

Sincerely,

*Mike Coleman*

Proposal Development Specialist
Proposal Management Section

**ADDENDUM NO. 02**

**1060-33-81**

**August 28, 2015**

**Special Provisions**

**4. Prosecution and Progress**

*Replace the section titled* **Long Term Closure Restrictions** *with the following:*

**Long Term Closure Restrictions**
The existing US 45 southbound to IH 94 eastbound system ramp, ramp NE, may be closed as shown in the plans in Stage 3A for a onetime only period not to exceed 240 consecutive calendar days to facilitate construction of that ramp. Do not close this ramp prior to July 11, 2016 and open this ramp to traffic by June 27, 2017, or as approved by the engineer. Lane rental assessments will not apply to this 240 calendar day closure.

Do not close long term the existing Ramp WN prior to August 19, 2016, or as approved by the engineer.

*Replace the section titled* **Interim and Final Completion of Work** *with the following:*

**Interim and Final Completion of Work**

*Supplement standard spec 108.10 with the following:*

The department will not grant time extensions for the following:

- Severe weather as specified in standard spec 108.10.2.2.
- Labor disputes that are not industry wide.
- Delays in material deliveries.

Each day is defined as a 24 hour period beginning at 12:01 AM.
SEF Rev. 14_1211

Complete the retaining wall work for Minor Retaining Wall R-2 along the berm south of Greenfield Avenue prior to May 27, 2016.

Complete the landscaping work, including but limited to, tree planting, seeding and mulch, and sodding along the berm south of Greenfield Avenue prior to May 27, 2016.

Complete the landscaping work, including but limited to, tree planting, seeding and mulch, and sodding along Adler Street, Chester Street and O'Connell Street prior to May 27, 2016.

**Interim Completion of Work National Avenue Exit Ramp**
If the contractor fails to complete all work as shown in Stage 1B of Project ID # 1060-34-82 and coordination measures necessary on the northbound IH 894/USH 45 exit ramp to National Avenue to restore traffic on the ramp within 28 calendar days of the closure date, the department will assess the contractor $10,000 in interim liquidated damages for each calendar day that the ramp remains closed after 12:01 AM, on the 29th calendar day after the closure begins. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on the 29th day, the exit ramp is not open.

**Interim Completion of Work Oklahoma Avenue Entrance Ramp**

If the contractor fails to complete all work as shown in Stage 1B of Project ID # 1060-34-82 and coordination measures necessary on the Oklahoma Avenue entrance ramp to northbound IH 894/USH 45 to restore traffic on the ramp within 28 calendar days of the closure date, the department will assess the contractor $10,000 in interim liquidated damages for each calendar day that the ramp remains closed after 12:01 AM, on the 29th calendar day after the closure begins. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on the 29th day, the entrance ramp is not open.

**Interim Completion of Work 04/15/2016**
If the contractor fails to complete all of the work necessary to open the IH 894 auxiliary lane as shown in project ID 1060-34-82, Stage 2 of the traffic control plans including:

- All work shown in stage 1B
- IH 894 pavement, pavement marking, barrier wall, signage

prior to 12:01 AM on April 16, 2016, the department will assess the contractor $1,810 in interim liquidated damages per day for each calendar day after 12:01 AM on April 16, 2016. An entire calendar day will be charged for any period of time within a calendar day that the road remains closed beyond 12:01 AM on April 16, 2016.

**Interim Completion of Work 05/26/2016**
If the contractor fails to complete all of the work necessary to complete the sign structures and restoration as shown in project ID 1060-34-82, Stage 2 of the traffic control plans prior to 12:01 AM on May 27, 2016, the department will assess the contractor $1,810 in interim liquidated damages per day for each calendar day after 12:01 AM on May 27, 2016. An entire calendar day will be charged for any period of time within a calendar day that the road remains closed beyond 12:01 AM on May 27, 2016.

**Interim Completion of Work Wisconsin Avenue, 93rd Street to 95th Street**
If the contractor fails to complete all concrete paving, pavement marking, sidewalk and restoration work on Wisconsin Avenue between 93rd Street and 95th Street, as shown in Stage 4 to restore traffic on Wisconsin Avenue between 93rd Street and 95th Street within 42 calendar days of the closure date, the department will assess the contractor $5,000 in interim liquidated damages for each calendar day that the roadway remains closed after 12:01 AM, on the 43rd calendar day after the closure begins. An entire calendar day will be charged for any period of time within a calendar day that the roadway remains closed beyond 12:01 AM, on the 43rd day, the roadway is not open.

**Interim Completion of Work Wisconsin Avenue, 99th Street to 97th Street**
If the contractor fails to complete all concrete paving, pavement marking, signing, sidewalk and restoration work on Wisconsin Avenue between 99th Street and 97th Street and on 97th Street, as shown in Stages 2 and 3 of the plans, within 60 calendar days, the department will assess the contractor $1,810 in interim liquidated damages for each calendar day that the roadway is not complete after 12:01 AM, on the 61st calendar day. An entire calendar day will be charged for any period of time within a calendar day that the roadway is not complete beyond 12:01 AM, on the 61st day.

**Interim Completion of Work 10/31/2016**
If the contractor fails to complete all of the work necessary to open IH 894/USH 45 to 3 traffic lanes in each direction as shown in Stage 4 of the traffic control plans including:

- All work shown in stages 1, 2, and 3;
- IH 894/USH 45 northbound pavement, pavement marking, barrier wall, signage and lighting;
- Bridge B-40-883;
- Retaining walls R-40-532, R-40-534 and R-40-467;
- Noise walls N-40-66 and N-40-79;

- The northbound IH 894/USH 45 exit to Greenfield Avenue including pavement, pavement marking, barrier wall, signage and lighting;
- The Greenfield Avenue entrance ramp to northbound IH 894/USH 45 including pavement, pavement marking, barrier wall, signage and lighting.

prior to 12:01 AM on November 1, 2016, the department will assess the contractor $50,000 in interim liquidated damages per day for each calendar day after 12:01 AM on November 1, 2016. An entire calendar day will be charged for any period of time within a calendar day that the road remains restricted to two lanes beyond 12:01 AM on November 1, 2016.

**Interim Completion of Work 11/22/2016**
If the contractor fails to complete all of the work necessary to open IH 94 to 3 traffic lanes in each direction as shown in Stage 5 of the traffic control plans including:

- All work shown in stages 1, 2, 3 and 4
- IH 94 eastbound pavement, pavement marking, barrier wall, signage and lighting;
- Bridges B-40-870, B-40-872 and B-40-874
- Retaining walls R-40-540
- The eastbound IH 94 exit to STH 100 including pavement, pavement marking, barrier wall, signage and lighting;
- The STH 100 entrance ramp to eastbound IH 94 including pavement, pavement marking, barrier wall, signage and lighting;

prior to 12:01 AM on November 23, 2016, the department will assess the contractor $50,000 in interim liquidated damages per day for each calendar day after 12:01 AM on November 23, 2016. An entire calendar day will be charged for any period of time within a calendar day that the road remains restricted to two lanes beyond 12:01 AM on November 23, 2016.

**Interim Completion of Work 12/22/2016**
If the contractor fails to complete all concrete paving as shown in Stage 4 and coordination measures necessary on the Bluemound Road entrance ramp to northbound USH 45 to restore traffic on the ramp prior to 12:01 AM on December 23, 2016, the department will assess the contractor $10,000 in interim liquidated damages per day for each calendar day after 12:01 AM on December 23, 2016, that the Bluemound Road entrance ramp to northbound USH 45 is not open to vehicular traffic. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on December 23, 2016.

**Interim Completion of Work 5/25/2017**
If the contractor fails to complete all of the work necessary to open Wisconsin Avenue to all traffic lanes in each direction including:

- Wisconsin Avenue Bridge, B-40-876 and retaining walls and approach pavements;
- Wisconsin Avenue pavement, pavement marking, sidewalks, signage and lighting;
- 97th Street pavement, pavement marking sidewalks and signing;
- Noise Wall N-40-62;
- The 95th Street traffic signal and all associated detection, signage, pedestrian heads, conduit, and lighting;
- The Wisconsin/94th Street intersection including all approaches, pavement marking, sidewalks, lighting, and signage;
- The Wisconsin/95th Street intersection including all approaches, pavement marking, sidewalks, lighting, and signage;
- The Wisconsin/97th Street intersection including all approaches, pavement marking, sidewalks, lighting, and signage;
- The Wisconsin/98th Street intersection including all approaches, pavement marking, sidewalks, lighting, and signage;

- Wisconsin Avenue work at and east of 94th Street including pavement marking sidewalks, lighting and signage;
- Wisconsin Avenue work at and west of 98th Street including pavement marking sidewalks, lighting and signage.

Prior to 12:01 AM on May 26, 2017, the department will assess the contractor $15,000 in interim liquidated damages per day for each calendar day after 12:01 AM on May 26, 2017. An entire calendar day will be charged for any period of time within a calendar day that the road remains closed beyond 12:01 AM on May 26, 2017.

**Interim Completion of Work northbound USH 45 Lane Reduction**
If the contractor fails to complete all work and coordination measures necessary on northbound USH 45 to restore traffic to 3 lanes within 14 calendar days of the closure date, the department will assess the contractor $50,000 in interim liquidated damages for each calendar day that the ramp remains closed after 12:01 AM, on the 15th calendar day after the closure begins. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on the 15th day, the roadway is not open to three lanes.

**Interim Completion of Work Greenfield Avenue Exit Ramp**
If the contractor fails to complete all concrete paving as shown in Stage 2 and coordination measures necessary on the northbound IH 894/USH 45 exit ramp to Greenfield Avenue to restore traffic on the ramp within 21 calendar days of the closure date, the department will assess the contractor $10,000 in interim liquidated damages for each calendar day that the ramp remains closed after 12:01 AM, on the 22nd calendar day after the closure begins. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on the 22nd day, the exit ramp is not open.

**Interim Completion of Work STH 100 Exit Ramp**
If the contractor fails to complete all concrete paving as shown in Stage 2 and coordination measures necessary on the eastbound IH 94 exit ramp to STH 100 to restore traffic on the ramp within 21 calendar days of the closure date, the department will assess the contractor $10,000 in interim liquidated damages for each calendar day that the ramp remains closed after 12:01 AM, on the 22nd calendar day after the closure begins. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on the 22nd day, the exit ramp is not open.

**Interim Completion of Work 05/25/2017**
If the contractor fails to complete all of the work necessary to open Structure B-40-856 and the pavement for the system ramp W-N that carries traffic from eastbound IH 94 to northbound USH 45 prior to 12:01 AM on May 26, 2017, the department will assess the contractor $30,000 in interim liquidated damages per day for each calendar day after 12:01 AM on May 26, 2017, that the W-N Ramp is not open to vehicular traffic. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on May 26, 2017.

**Interim Completion of Work 06/27/2017**
If the contractor fails to complete all of the work necessary to open Structure B-40-853 and the pavement for the system ramp N-E that carries traffic from southbound USH 45 to eastbound IH 94 prior to 12:01 AM on June 28, 2017, the department will assess the contractor $50,000 in interim liquidated damages per day for each calendar day after 12:01 AM on June 28, 2017, that the N-E Ramp is not open to vehicular traffic. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on June 28, 2017.

**Interim Completion of Work 11/21/2017**
If the contractor fails to complete all concrete paving as shown in Stage 6 and coordination measures necessary on the STH 100 entrance ramp to westbound IH 94 to restore traffic on the ramp prior to 12:01 AM on November 22, 2017, the department will assess the contractor $10,000 in

interim liquidated damages per day for each calendar day after 12:01 AM on November 22, 2017, that the STH 100 entrance ramp to westbound IH 94 is not open to vehicular traffic. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on November 22, 2017.

**Interim Completion of Work 11/21/2017**
If the contractor fails to complete all of the work necessary to open Structure B-40-854 and the pavement for the system ramp E-S that carries traffic from westbound IH 94 to southbound IH 894/USH 45 prior to 12:01 AM on November 22, 2017, the department will assess the contractor $30,000 in interim liquidated damages per day for each calendar day after 12:01 AM on November 22, 2017, that the E-S Ramp is not open to vehicular traffic. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on November 22, 2017.

**Interim Completion of Work National Avenue Entrance Ramp**
If the contractor fails to complete all concrete paving, shoulder and concrete barrier work, as shown in Stage 7 and coordination measures necessary on IH 894/USH 45 and the National Avenue entrance ramp to southbound IH 894/USH 45 to restore traffic on the ramp within 21 calendar days of the closure date, the department will assess the contractor $10,000 in interim liquidated damages for each calendar day that the ramp remains closed after 12:01 AM, on the 22nd calendar day after the closure begins. An entire calendar day will be charged for any period of time within a calendar day that the ramp remains closed beyond 12:01 AM, on the 22nd day, the entrance ramp is not open.

**Interim Completion of Work 12/21/2017**
If the contractor fails to complete all work to get into Stage 8 traffic configuration, as shown in the plans, prior to 12:01 AM on December 22, 2017, the department will assess the contractor $25,000 in interim liquidated damages per calendar day, or portion thereof, for each calendar day after 12:01 AM on December 22, 2017, that the project is not into Stage 8 traffic configuration. An entire calendar day will be charged for any period of time within a calendar day that the project is not into Stage 8 traffic configuration beyond 12:01 AM December 22, 2017.

**Interim Completion of Work 08/29/2018**
If the contractor fails to complete all of the work necessary to open to full width and in final configuration all travelled roadway and shoulder lanes, all final pavement marking, signage, traffic control devices, and safety appurtenances by 12:01 AM on August 30, 2018, the department will assess the contractor $50,000 in interim liquidated damages per calendar day for each calendar day after 12:01 AM on August 30, 2018, that this work is not completed. An entire calendar day will be charged for any period of time within a calendar day that this work remains uncompleted beyond 12:01 AM, on August 30, 2018.

**Final Completion of Work**
If contract time expires prior to completing all work specified in the contract, additional liquidated damages will be affixed according to standard spec 108.11.

**123. Luminaires Utility LED B, Item 659.1120; Luminaires Utility LED D, Item 659.1130.**

*Replace entire article language with the following:*

*Supplement standard spec 659.2 with the following:*

(2) The luminaire shall be equipped with a 10KV surge protection. Test surge protection in accordance to ANSI/IEEE C62.45 per ANSI/IEEE C62.42.2 scenario 1 category C high exposure 10KV/10VA waveforms.

(4) Furnish each luminaire with an ANSI C136.40 compliant, 7-prong, locking type, photo control receptacle. Furnish and install a rain tight shorting cap.

(5) Furnish shop drawings as specified in 506.3.2, except submit 5 copies with the materials list. Ensure the drawings contain sufficient detail to allow satisfactory review and show the dimensions of all equipment shown in the plans.

**206. Probeam Luminaire, Item SPV.0060.1127**

*Replace the section titled* **B.2 Luminaire** *with the following:*

**B.2 Luminaire**
Luminaire housing shall be die cast from low copper content A360 aluminum with integral heat fins to optimize thermal management through convective and conductive cooling. Housing shall be designed for either wall or ceiling mounting using heavy duty stainless steel brackets. Housing shall have three ¾" NPT threaded entries for connecting with conduit raceway.

Luminaire door shall be completely sealed using a silicone gasket and secured by minimum 6 stainless steel latches or Alloy 410 stainless steel bolts with captive zinc-plated fasteners. Housing door shall be equipped with two internal hinges for easy access to internal components including drivers, surge protection, LED arrays, quick disconnect plugs and high and low voltage terminal blocks. Luminaire door shall encase prismatic borosilicate glass lens.

Complete assembly shall be tested to withstand 3G vibration per ANSI C136.31-2001 and shall be rated IP66 per IEC60529.

*Replace the section titled* **B.6 Ratings / Certifications** *with the following:*

**B.6 Ratings / Certifications**
Luminaires shall be rated and/or certified as follows:

- IP-66 minimum weather fastness rating
- IDA dark sky full cutoff compliant
- IEC 61000 - Electromagnetic Compatibility Test (EMC)
- FCC Title 47 CFR Part 18 – Federal Communication Commission
- ANSI\IEEE\C62.41
- IEEE 519 – Harmonic Control in Electrical Power Systems
- ANSI C82.77:2002 Harmonic Distortion
- ANSI C136.31:2001 – Luminaire Vibration
- ASTM B 117:2003 – Salt Spray Test
- IEC 60529 – Degrees of protection provided by enclosure
- UL 1598 – UL Wet Location @ 40C
- ROHS compliance for key components

**405. Partially Removing Existing Drilled Shafts, Item SPV.0105.0050**

**A Description**
This special provision describes partially removing the two existing drilled shaft foundations at STA 193+63, 199'LT and at STA 193+66, 175'LT to an elevation 2' below the finish grade and disposing of resulting materials in accordance to the applicable provisions of standard specifications 203 and as hereinafter provided.

The existing drilled shafts are fully reinforced concrete drilled shaft foundations. Each drilled shaft is approximately 8' in diameter and 70' deep. Both drilled shaft foundations are in conflict with

proposed grading and will be removed to an elevation 2’ below the finish grade. It is anticipated that approximately the top 10’ of each shaft will have to be removed.

**B (Vacant)**

**C Construction**
Remove and dispose of both of the existing drilled shaft foundations to an elevation that is 2’ below the finish grade.

**D Measurement**
The department will measure Partially Removing Existing Drilled Shafts as a lump sum unit of work, acceptably completed.

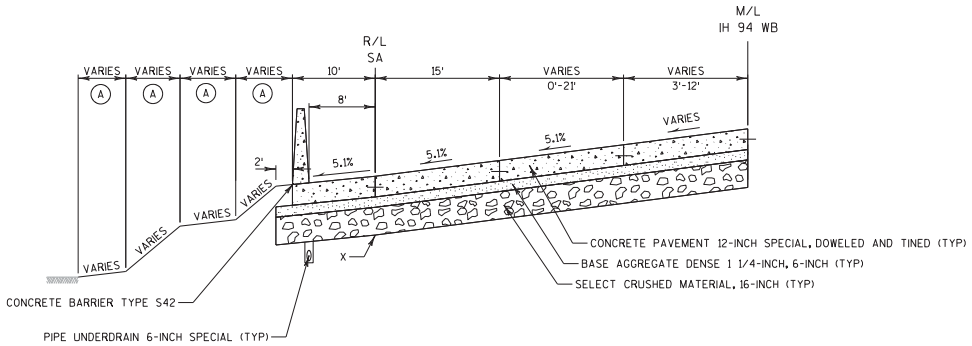
**E Payment**
The department will pay for measured quantities at the contract unit price under the following bid items:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0105.0050 | Partially Removing Existing Drilled Shafts | LS |

Payment is full compensation for removing the drilled shafts and for hauling and disposing of all materials

**406. Crash Cushions Permanent Low Maintenance and Crash Cushions Temporary.**

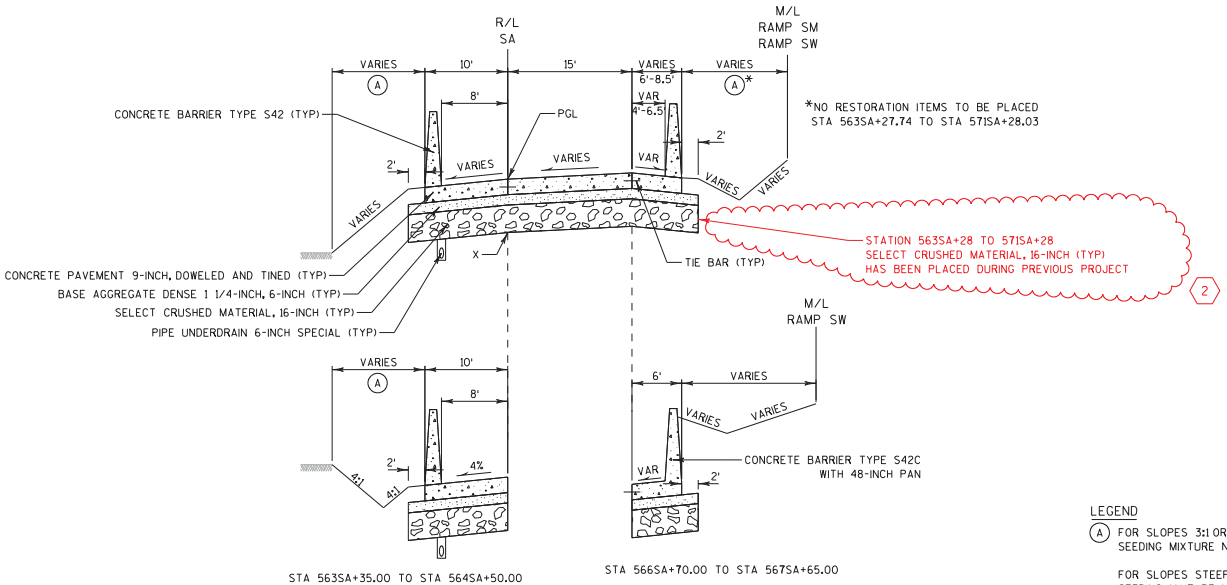
Complete work in accordance with Section 614 of the standard specifications.



*Replace section 614.2.7 with the following:*

Use Model SCI 100GM Crash Attenuator from Smart Cushion Innovations (SCI) Products for permanent and temporary crash cushions.

**Schedule of Items**
Attached, dated August 28, 2015, are the revised Schedule of Items Pages 1 – 4, 18, 22, 46, 105, and 128 – 142.



**Plan Sheets**
The following 8½ x 11-inch sheets are attached and made part of the plans for this proposal: 206, 398, 957, 1621, 1664, 1924, 2353, 2862, 2868, 3850, 3852

## GENERAL NOTES:

1. DETAILS OF CONSTRUCTION, MATERIALS, AND WORKMANSHIP NOT SHOWN ON THIS DRAWING SHALL CONFORM TO THE PERTINENT REQUIREMENTS OF THE STANDARD SPECIFICATIONS, THE SPECIAL PROVISIONS, AND THE PLANS.
2. UNLESS OTHERWISE NOTED, ALL SIGNS SHOWN ON THIS SHEET ARE "SIGNS, TYPE I".
3. UNLESS OTHERWISE NOTED, TYPE II SIGNS ON THIS SHEET SHALL HAVE "TYPE H REFLECTIVE SHEETING" AND, "TYPE H MESSAGE MATERIAL". TYPE I SIGNS SHALL HAVE TYPE SH REFLECTIVE SHEETING.
4. UNLESS OTHERWISE NOTED, ALL SIGNS SHOWN ON THIS SHEET SHALL HAVE A GREEN BACKGROUND AND WHITE MESSAGE.
5. TYPE II SIGNS ALL UPPER CASE MESSAGE (EXCEPT ON SHIELDS OR WHERE OTHERWISE NOTED) SHALL BE "SERIES E. ALL LOWER CASE MESSAGE WITH AN INITIAL UPPER CASE LETTER SHALL BE "SERIES E.
6. TYPE I SIGNS - ALL UPPER CASE MESSAGE (EXCEPT ON SHIELDS OR WHERE OTHERWISE NOTED) SHALL BE SERIES "E" MODIFIED. ALL LOWER CASE MESSAGE WITH AN INITIAL UPPER CASE LETTER SHALL BE SERIES "E" MODIFIED. ALL CAP WORDS ARE "SERIES E"
7. UNLESS OTHERWISE NOTED, ALL SIGNS SHOWN ON THIS SHEET SHALL HAVE "TYPE A" OR "TYPE C" ARROWS AS SHOWN. SEE THE STANDARD SIGN PLATES FOR FURTHER DETAILS.
8. SEE THE STANDARD SIGN PLATES FOR FURTHER DETAILS ON ROUTE MARKER SHIELDS.
9. THE SIGN NUMBER IS DENOTED IN THE CIRCLE NEAR EACH DETAIL.
10. NUMBER FRACTIONS FOR INTERCHANGE SEQUENCE SIGNS SHALL BE SERIES "E" PER PLATES A11-7 AND A11-10
11. DO NOT SCALE.

PROFILE GRADE LINE - SCHLINGER AVENUE

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2" CLEAR UNLESS OTHERWISE SHOWN OR NOTED.

THE FIRST OR FIRST TWO DIGITS OF THE BAR MARK SIGNIFIES THE BAR SIZE.

BEVEL ALL EXPOSED EDGES *". UNLESS OTHERWISE NOTED.

COORDINATES ON THIS PLAN ARE REFERENCED TO THE WISCONSIN COUNTY COORDINATES SYSTEM (WCCS), MILWAUKEE COUNTY ZONE, NAD 83 (2007). ELEVATIONS ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM NAVD 88.

THE UTILITY INFORMATION SHOWN ON THESE DRAWINGS CONCERNING TYPE AND LOCATION OF UNDERGROUND UTILITIES IS NOT GUARANTEED TO BE ACCURATE OR ALL-INCLUSIVE. THE CONTRACTOR IS RESPONSIBLE FOR MAKING HIS OWN DETERMINATION AS TO TYPE AND LOCATION OF UNDERGROUND UTILITIES AS MAY BE NECESSARY TO AVOID DAMAGE. UTILITIES LABELED AS PROPOSED MAY BE INSTALLED BY OTHERS PRIOR TO THIS CONTRACT.

AT THE BACKFACE OF THE NORTH ABUTMENT ALL VOLUME WHICH CANNOT BE PLACED BEFORE ABUTMENT CONSTRUCTION AND IS NOT OCCUPIED BY THE NEW STRUCTURE SHALL BE BACKFILLED WITH STRUCTURE BACKFILL. ALSO EXCLUDED IS THE " BASE AGGREGATE DENSE 1¼" AS DETAILED ON THE STRUCTURAL APPROACH SLAB SHEETS.

LIGHT WEIGHT FOAMED CONCRETE FILL (LFCF) SHALL BE PLACED BEHIND THE SOUTH ABUTMENT THIS IS NOT A BRIDGE BID ITEM. SEE R-40-527 PLANS AND ROADWAY PLANS FOR DETAILS.

ELASTOMERIC BEARING PADS NEED NOT BE INDIVIDUALLY MOLDED PROVIDED THE CUT EDGES ARE SMOOTH AND TRUE.

THE GRADATION OF THE STRUCTURE BACKFILL SHALL MEET THE REQUIREMENTS OF SECTION 209.2.2 OF THE STANDARD SPECIFICATIONS FOR GRADE 1 MATERIAL.

PROTECTIVE SURFACE TREATMENT TO BE APPLIED TO THE ENTIRE TOP OF DECK SURFACE AND TOP OF APPROACH SLAB SURFACE AND THE FRONT FACE AND THE TOP OF THE PARAPETS, INCLUDING PARAPETS ON APPROACH SLABS.

THE SLOPE OF THE FILL IN FRONT OF THE NORTH ABUTMENT SHALL BE COVERED WITH SLOPE PAVING MATERIAL TO THE EXTENT SHOWN ON SHEET 1 AND IN THE ABUTMENT DETAILS.

THE EXISTING BRIDGE B-40-94 IS A 3 SPAN PRESTRESSED GIRDER STRUCTURE. THE ENTIRE STRUCTURE WILL BE REMOVED. SEE "CONSTRUCTION STAGING" SHEET. BRIDGE PLANS DO NOT CORRESPOND TO ROADWAY STAGES. REFER TO ROADWAY STAGING PLANS FOR ADDITIONAL INFORMATION.

THE COST OF FURNISHING AND PLACING THE SIZE 2 COARSE AGGREGATE UNDER THE SLOPE PAVING SHALL BE CONSIDERED INCIDENTAL TO "SLOPE PAVING CONCRETE."

THE CONCRETE QUANTITIES FOR THE PARAPETS, SUPERSTRUCTURE DECK, APPROACH SLABS (EXCLUDING THE FOOTING), CONCRETE DIAPHRAGMS AND HAUNCH OVER GIRDERS SHALL BE PAID FOR UNDER THE BID ITEM " HPC MASONRY STRUCTURES."

THE CONTRACTOR MUST COORDINATE THE REMOVAL OF EXISTING STRUCTURE B-40-94 AND CONSTRUCTION OF BRIDGE B-40-796 WITH RETAINING WALLS R-40-495, R-40-498, R-40-524, R-40-525 AND R-40-527.

A PORTION OF NOISE BARRIER N-40-76 WILL BE MOUNTED ON STRUCTURE B-40-796. THE PLAN DETAILS FOR STRUCTURE B-40-796 SHOW AN ASSUMED POST SPACING AND MOUNTING DETAILS FOR NOISE BARRIER. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATING ACTUAL MOUNTING DETAILS, NOISE BARRIER POST SPACING AND LOCATION OF EMBEDDED ANCHORAGE ASSEMBLIES WITH THE MANUFACTURER/SUPPLIER OF THE NOISE BARRIER AND THE APPROVED NOISE BARRIER SHOP DRAWINGS.

PLANS, DIMENSIONS, QUANTITIES AND REINFORCEMENT DETAILS ARE BASED ON AN ASSUMED CONCRETE WALL PANEL THICKNESS FOR R-40-495 OF 7½ INCHES. FOR PANEL THICKNESSES OTHER THAN 7½ INCHES, THE CONTRACTOR SHALL VERIFY NORTH ABUTMENT NOTCH REINFORCEMENT BAR DETAILS AND QUANTITIES AND WILL BE RESPONSIBLE FOR ANY QUANTITY VARIATIONS.

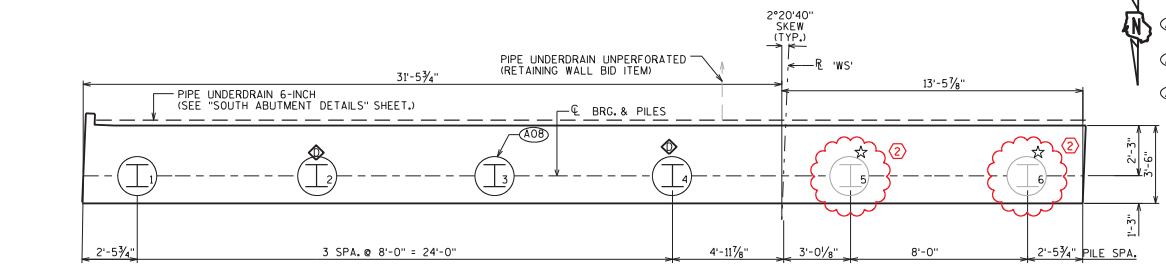
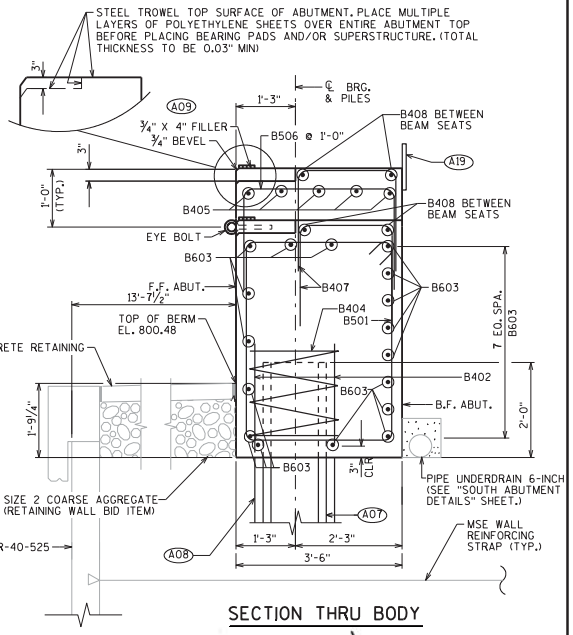
## ELEVATION LOOKING SOUTH



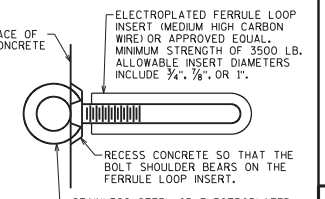
## TYPICAL BEAM SEAT DETAIL

* EXTERIOR BEAM SEAT ELEVATION CORRECTIONS FOR GIRS. 1 & 5 ARE GIVEN IN THE ABUTMENT BODY PLAN VIEW.



NOTE:
LOCATE FALL PROTECTION EYE BOLTS AT SPACING SHOWN, MEASURED ALONG F.F. ABUT.

## PLAN



## PILE PLAN

## SECTION THRU BODY

William C. Dreher LLB 8/27/15

## EYE BOLT DETAIL

COST INCIDENTAL TO BID ITEM "CONCRETE MASONRY BRIDGES".

A07 SUPPORT ABUTMENT ON HP 12X53 STEEL PILING WITH A REQUIRED DRIVING RESISTANCE OF 220 TONS PER PILE AS DETERMINED BY THE PDA/CAPWAP ACCEPTANCE METHOD. ESTIMATED PILE LENGTH = 110 FEET.

PILE SLEEVE NOTES

1. COORDINATE PLACEMENT OF PILING SLEEVE FOR BRIDGE B-40-796 WITH WALL R-40-525 CONSTRUCTION.
2. FOUR OF SOUTH ABUTMENT PILING SLEEVES TO BE PAID FOR WITH B-40-796.
3. SLEEVES SHALL BE PLACED FROM LOWER LIMITS OF EXCAVATION FOR MSE REINFORCED ZONE TO BOTTOM OF ABUTMENT.
4. INSTALLATION ELEVATION AT BOTTOM OF MSE REINFORCED ZONE VARIES. SEE "WALL ELEVATIONS" OF R-40-525 PLAN FOR WALL ELEVATIONS.

A09 ¾" X 4" FILLER (OUT TO OUT OF ABUT.)

A18 3/4" CORK FILLER UP VERT. BEAM SEAT FACES THAT RUN PARALLEL WITH GIRDER.

A19 18" (RMW) RUBBERIZED MEMBRANE WATERPROOFING SEAL ALL HORIZ. & VERT. JOINTS AT BACKFACE.

CUT OFF PILING IN EXISTING PIER FOOTING THAT ARE IN THE FOOTPRINT OF THE PROPOSED MSE WALL R-40-525 1'-0" BELOW BOTTOM OF PROPOSED MSE WALL LEVELING PAD.

② DYNAMIC PILE LOAD TESTING. THE PILE RESTRIKES ON THESE PILES SHOULD BE THE ONLY RESTRIKES CONSIDERED FOR THE PILE DRIVING CRITERIA FOR PILES #1 THRU #4.

PILES #5 & #6 ARE HP 12X53 STEEL PILING WITH 21" DIA. CORRUGATED STEEL PILING SLEEVES. THESE PILES WERE INSTALLED IN A PRIOR CONTRACT, BUT WERE NOT DRIVEN TO THE REQUIRED DRIVING RESISTANCE OF 220 TONS. RESTRIKE PILES #5 & #6 TO MEASURE THE REQUIRED DRIVING RESISTANCE AND DRIVE ADDITIONAL PILE LENGTH NEEDED TO MEET THE REQUIRED DRIVING RESISTANCE OF 220 TONS. (SEE R-40-525, CONTRACT ID 1060-33-80.)

## DESIGN DATA

LIVE LOAD:
DESIGN LOADING: HL-93
INVENTORY RATING FACTOR: RF = 1.12
OPERATING RATING FACTOR: RF = 1.63
WISCONSIN STANDARD PERMIT VEHICLE (WIS-SPV): 250 KIPS

STRUCTURE IS DESIGNED FOR A FUTURE WEARING SURFACE OF 20 POUNDS PER SQUARE FOOT.

MATERIAL PROPERTIES:

| | |
|---|---|
| CONCRETE MASONRY: | |
| SUPERSTRUCTURE (HPC) | f'c = 4,000 psi |
| SUBSTRUCTURE | f'c = 4,000 psi |
| 54W-INCH PRESTRESSED GIRDERS | f'c = 8,000 psi |
| STEEL PILING | fy = 50,000 psi |
| BAR STEEL REINFORCEMENT | fy = 60,000 psi |
| PRESTRESSING STRANDS | ULTIMATE TENSILE STRENGTH = 270,000 psi |

## FOUNDATION DATA

USING THE MODIFIED GATES ACCEPTANCE METHOD

ABUTMENTS AND PIER SHALL BE SUPPORTED ON 16" CAST-IN-PLACE CONCRETE PILING DRIVEN TO A REQUIRED DRIVING RESISTANCE OF 310 TONS PER PILE AS DETERMINED BY THE MODIFIED GATES ACCEPTANCE METHOD.

THE FACTORED AXIAL RESISTANCE OF PILES IN COMPRESSION USED FOR DESIGN IS THE REQUIRED DRIVING RESISTANCE MULTIPLIED BY A RESISTANCE FACTOR OF 0.5 USING THE MODIFIED GATES ACCEPTANCE METHOD TO DETERMINE DRIVEN PILE CAPACITY.

ESTIMATED PILE LENGTHS:

| | |
|---|---|
| WEST ABUTMENT: | 45 FEET |
| PIER: | 35 FEET |
| EAST ABUTMENT: | 50 FEET |

## GENERAL NOTES

G1. DESIGN IS IN ACCORDANCE WITH AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS 6TH EDITION, 2012 WITH INTERIM REVISIONS, UNLESS OTHERWISE NOTED.

G2. DRAWINGS SHALL NOT BE SCALED.

G3. ALL DIMENSIONS ARE IN FEET AND INCHES UNLESS OTHERWISE NOTED.

G4. COORDINATES ON THIS PLAN ARE REFERENCED TO THE WISCONSIN COUNTY COORDINATE SYSTEM (WCCS), MILWAUKEE COUNTY ZONE, NAD 83 (2007). ALL STATIONS AND ELEVATIONS ARE IN FEET. ELEVATIONS ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM NAVD 88 (2007).

G5. THE UTILITY INFORMATION SHOWN ON THESE DRAWINGS CONCERNING TYPE AND LOCATION OF UNDERGROUND UTILITIES IS NOT GUARANTEED TO BE ACCURATE OR ALL INCLUSIVE. THE CONTRACTOR IS RESPONSIBLE FOR MAKING THEIR OWN DETERMINATIONS AS TO TYPE AND LOCATION OF UNDERGROUND UTILITIES AS MAY BE NECESSARY TO AVOID DAMAGE.

G6. NAME PLATE SHALL BE CONSIDERED INCIDENTAL TO THE BID ITEM "HPC MASONRY STRUCTURES". REFER TO S.D.D "NAME PLATE (STRUCTURES)" FOR NAME PLATE DETAILS.

G7. THE CONTRACTOR MUST COORDINATE THE REMOVAL OF EXISTING STRUCTURE B-40-143 WITH THE CONSTRUCTION OF BRIDGE B-40-874.

G8. PILE SPLICES SHALL BE MADE BY A CERTIFIED WELDER.

G9. STRUCTURE B-40-874 WILL BE CONSTRUCTURED IN TWO PHASES. STRUCTURE PHASES DO NOT CORRESPOND TO ROADWAY STAGES, SEE ROADWAY PLANS FOR COMPLETE STAGING INFORMATION.

G10. THE SLOPE OF THE FILL IN FRONT OF THE ABUTMENTS SHALL BE COVERED WITH SLOPE PAVING MATERIAL TO THE EXTENT SHOWN ON SHEET 1 AND IN THE SLOPE PAVING DETAILS.

G11. THE SLOPE OF THE EMBANKMENT ABOVE THE EXISTING CONCRETE CHANNEL SHALL BE COVERED WITH HEAVY RIPRAP AND GEOTEXTILE FABRIC TYPE 'HR' TO THE EXTENT SHOWN ON SHEET 1.

G12. ELASTOMERIC BEARING PADS NEED NOT BE INDIVIDUALLY MOLDED PROVIDED THE CUT EDGES ARE SMOOTH AND TRUE.

## CONCRETE NOTES

C1. BEVEL EXPOSED EDGES OF CONCRETE ¾", UNLESS NOTED OTHERWISE.

C2. BAR STEEL REINFORCEMENT SHALL HAVE 2" CLEAR COVER, UNLESS SHOWN OTHERWISE.

C3. ALL REINFORCING BARS ARE ENGLISH. THE FIRST OR FIRST TWO DIGITS OF THE BAR MARK SIGNIFIES THE BAR SIZE. BAR DIMENSIONS ARE OUT-TO-OUT OF BAR.

C4. APPLY PROTECTIVE SURFACE TREATMENT TO THE TOP OF DECK SLAB, TOPS OF THE STRUCTURAL APPROACH SLABS, TOPS AND INSIDE FACES OF PARAPETS ALONG DECK AND STRUCTURAL APPROACH SLABS, AND TO THE PAVING NOTCH SURFACES BEFORE POURING THE STRUCTURAL APPROACH SLABS.

C5. THE HAUNCH CONCRETE QUANTITY IS BASED ON THE AVERAGE HAUNCH SHOWN ON THE PRESTRESSED GIRDERS DETAILS SHEET.

C6. THE CONCRETE QUANTITY FOR THE ABUTMENTS SHALL BE PAID FOR UNDER BID ITEM "CONCRETE MASONRY BRIDGES".

C7. THE CONCRETE QUANTITY FOR THE DECK SLAB, HAUNCHES, CONCRETE DIAPHRAGMS, AND PARAPETS SHALL BE PAID FOR UNDER BID ITEM "HPC MASONRY STRUCTURES".

C8. THE CONCRETE QUANTITY FOR THE STRUCTURAL APPROACH SLAB FOOTINGS SHALL BE PAID FOR UNDER BID ITEM "CONCRETE MASONRY BRIDGES". THE REMAINING CONCRETE QUANTITY FOR THE STRUCTURAL APPROACH SLABS, INCLUDING PARAPETS, SHALL BE PAID FOR UNDER BID ITEM "HPC MASONRY STRUCTURES".

## BACKFILL NOTES

B1. AT THE BACK FACE OF ABUTMENT, ALL SPACES EXCAVATED AND NOT OCCUPIED BY THE NEW STRUCTURE OR MSE BACKFILL SHALL BE BACKFILLED WITH STRUCTURE BACKFILL.

B2. THE GRADATION OF THE STRUCTURE BACKFILL SHALL MEET THE REQUIREMENTS OF SECTION 209.2.2 OF THE STANDARD SPECIFICATIONS FOR GRADE 1 MATERIAL.

## EXCAVATION NOTES

E1. THE EXISTING GROUNDLINE SHALL BE THE UPPER LIMIT OF EXCAVATION FOR STRUCTURES.

| Plan Sheet | Plan Sheet Title (brief description of why sheet was added) |
| 1958A | Revised west leg lighting quantities |

**Other**

**ASP-5 has been revised and is effective with the September 29, 2015 letting.**

The responsibility for notifying potential subcontractors and suppliers of these changes remains with the prime contractor.

Sincerely,

*Mike Coleman*

Proposal Development Specialist
Proposal Management Section

**ADDENDUM NO. 03**

**1060-33-81**

**September 14, 2015**

**ASP-5**

*Replace ASP-5 with following:*

**Effective with September 29, 2015 Letting** **ASP-5**

**ADDITIONAL SPECIAL PROVISIONS 5**

**Fuel Cost Adjustment**

**A Description**

Fuel Cost Adjustments will be applied to partial and final payments for work items categorized in Section B as a payment to the contractor or a credit to the department. ASP-5 shall not apply to any force account work.

**B Categories of Work Items**

The following items and Fuel Usage Factors shall be used to determine Fuel Cost Adjustments:

| (1) Earthwork. | | Unit | Gal. Fuel Per Unit |
|---|---|---|---|
| 205.0100 | Excavation Common | CY | 0.23 |
| 205.0200 | Excavation Rock | CY | 0.39 |
| 205.0400 | Excavation Marsh | CY | 0.29 |
| 208.0100 | Borrow | CY | 0.23 |
| 208.1100 | Select Borrow | CY | 0.23 |
| 209.0100 | Backfill Granular | CY | 0.23 |
| 350.0102 | Subbase | CY | 0.28 |
| 350.0104 | Subbase | Ton | 0.14 |
| 350.0115 | Subbase 6-Inch | SY | 0.05 |
| 350.0120 | Subbase 7-Inch | SY | 0.05 |
| 350.0125 | Subbase 8-Inch | SY | 0.06 |
| 350.0130 | Subbase 9-Inch | SY | 0.07 |
| 350.0135 | Subbase 10-Inch | SY | 0.08 |
| 350.0140 | Subbase 11-Inch | SY | 0.09 |
| 350.0145 | Subbase 12-Inch | SY | 0.09 |
| SPV.0035.0100 | EBS Excavation | CY | 0.23 |

**C Fuel Index**

A Current Fuel Index (CFI) in dollars per gallon will be established by the Department of Transportation for each month. The CFI will be the price of No. 2 fuel oil, as reported in U.S. Oil Week, using the first issue dated that month. The CFI will be the average of prices quoted for Green Bay, Madison, Milwaukee and Minneapolis.

The base Fuel Index (BFI) for this contract is $1.90 per gallon.

**D Computing the Fuel Cost Adjustment**

The engineer will compute the ratio CFI/BFI each month. If the ratio falls between 0.85 and 1.15, inclusive, no fuel adjustment will be made for that month. If the ratio is less than 0.85 a credit to the department will be computed. If the ratio is greater than 1.15 additional payment to the contractor will be computed. Credit or additional payment will be computed as follows:

(1) The engineer will estimate the quantity of work done in that month under each of the contract items categorized in Section B.

(2) The engineer will compute the gallons of fuel used in that month for each of the contract items categorized in Section B by applying the unit fuel usage factors shown in Section B.

(3) The engineer will summarize the total gallons (Q) of fuel used in that month for the items categorized in Section B.

(4) The engineer will determine the Fuel Cost Adjustment credit or payment from the following formula:

$$FA = \left( \frac{CFI}{BFI} - 1 \right) x\ Q\ x\ BFI$$

(plus is payment to contractor; minus is credit to the department)

| | | | |
|---|---|---|---|
| Where | FA | = | Fuel Cost Adjustment (plus or minus) |
| | CFI | = | Current Fuel Index |
| | BFI | = | Base Fuel Index |
| | Q | = | Monthly total gallons of fuel |

**E Payment**

A Fuel Cost Adjustment credit to the department will be deducted as a dollar amount each month from any sums due to the contractor. A Fuel Cost Adjustment payment to the contractor will be made as a dollar amount each month.

Upon completion of the work under the contract, any difference between the estimated quantities and the final quantities will be determined. An average CFI, calculated by averaging the CFI for all months that fuel cost adjustment was applied, will be applied to the quantity differences. The average CFI shall be applied in accordance with the procedure set forth in Section D.

**Special Provisions**

**4. Prosecution and Progress**

*Replace the fifth paragraph under section titled* **Freeway Lane Restrictions** *with the following:*

Northbound IH 894/USH 45 between the south end of the project and Schlinger Avenue may be reduced to two through lanes to facilitate the staged construction of Structure B-40-883 and roadway construction. This closure will only be allowed during Stages 2, 3 and 4 as shown in the plans, shall not take place prior to April 16, 2016 and shall be removed by November 1, 2016.

**94. Noise Barriers Double-Sided Sound Absorptive N-40-61, Item 531.0300.S.0001; N-40-62, Item 531.0300.S.0002; N-40-63, Item 531.0300.S.0003; N-40-64, Item 531.0300.S.0004; N-40-66, Item 531.0300.S.0006; N-40-67, Item 531.0300.S.0007; N-40-76, Item 531.0300.S.0008; N-40-77, Item 531.0300.S.0009; N-40-78, Item 531.0300.S.0010; N-40-79, Item 531.0300.S.0011**

*Replace the section titled* **E Payment** *with the following:*

**E Payment**
The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| 531.0300.S.0001 | Noise Barriers Double-Sided Sound Absorptive N-40-61 | SF |
| 531.0300.S.0002 | Noise Barriers Double-Sided Sound Absorptive N-40-62 | SF |
| 531.0300.S.0003 | Noise Barriers Double-Sided Sound Absorptive N-40-63 | SF |
| 531.0300.S.0004 | Noise Barriers Double-Sided Sound Absorptive N-40-64 | SF |
| 531.0300.S.0006 | Noise Barriers Double-Sided Sound Absorptive N-40-66 | SF |
| 531.0300.S.0007 | Noise Barriers Double-Sided Sound Absorptive N-40-67 | SF |
| 531.0300.S.0008 | Noise Barriers Double-Sided Sound Absorptive N-40-76 | SF |
| 531.0300.S.0009 | Noise Barriers Double-Sided Sound Absorptive N-40-77 | SF |
| 531.0300.S.0010 | Noise Barriers Double-Sided Sound Absorptive N-40-78 | SF |
| 531.0300.S.0011 | Noise Barriers Double-Sided Sound Absorptive N-40-79 | SF |

Payment is full compensation for providing noise barrier including coloring and aesthetic treatment on panels; for preparing the design drawings, calculations and handling plan; for furnishing and delivering sample and test panels; for testing noise barrier materials; for excavation, preparing the site, constructing foundations, erecting posts and panels, and disposing of waste materials. The department will pay up to 80 percent of the contract value of the work completed until meeting all of the requirements of the contract specification, including testing. The department will make final payments upon acceptance of all work required.

**137. EBS Excavation, Item SPV.0035.0100**

*Replace the section titled* **C Construction** *with the following:*

**C Construction**
Perform work in accordance to the pertinent corrective action efforts from approved QMP Subgrade Quality Control Plan.

**C.1 Subgrade Transition**
Conform to requirements of QMP Subgrade, for identification and acceptance of EBS Excavation.

If the engineer requests, provide loaded trucks and run the subgrade as the engineer directs to confirm yielding areas.

**C.2 Temporary Drainage**

During construction, slope and drain the excavation bottoms to prevent water accumulation. If it is necessary in the prosecution of the work to interrupt existing surface drainage, sewers, or under drainage, provide temporary drainage until completing permanent drainage work.

**138. EBS Backfill, Item SPV.0035.0101**

*Replace the section titled* **A Description** *with the following:*

**A Description**
This special provision supplements work as described under standard spec 205.3.4 and when select crushed material is preferred backfill.

**355. Lining 96-Inch Reinforced Concrete Storm Sewer Pipe, Item SPV.0090.8090**

*Replace the section titled* **B.1 Roughness and Final inside Pipe Diameter** *with the following:*

**B.1 Roughness and Final inside Pipe Diameter**
Provide paved liner material not exceeding the manning's coefficient of roughness of 0.013. The final inside pipe diameter measured after concrete paved insert or liner must be a minimum of 88.5-inches.

**389. Concrete Staining Previously Constructed Structure, Item SPV.0165.4785**

*Replace the first paragraph under the section titled* **C.2 Modified Concrete Surface Finish** *with the following:*

Provide a modified surface finish to all cast in place concrete surfaces by filling all air holes as the engineer directs using mortar as defined in B.2. Before applying the modified surface finish, saturate the concrete surface with water and fill all tie rod holes and large cavities, and remove or correct all fins and irregularities as specified in 502.3.7.1 and 502.3.7.2.

**390. Concrete Staining Multi-Color Previously Constructed Structure, Item SPV.0165.4786**

*Replace the first paragraph under the section titled* **C.2 Modified Concrete Surface Finish** *with the following:*

Provide a modified surface finish to all cast in place concrete surfaces by filling all air holes as the engineer directs using mortar as defined in B.2. Before applying the modified surface finish, saturate the concrete surface with water and fill all tie rod holes and large cavities, and remove or correct all fins and irregularities as specified in 502.3.7.1 and 502.3.7.2.

**398. Topsoil Special, Item SPV.0180.0200**

*Replace the section titled* **C.3 Placing Topsoil** *with the following:*

**C.3 Placing Topsoil**
After preparing and finishing the areas designated for topsoil to the required lines, grades, slopes and cross section, place and spread the topsoil to a uniform depth as the plans show or the contract requires. If no depth is shown, place and spread the topsoil to a minimum depth of 4 inches in rural areas and a minimum depth of 6 inches in urban areas, or as the engineer designates.

Break down all clods and lumps using appropriate equipment to provide a uniformly textured soil.

Where using either sod or seed mixture 40 ensure that, for the upper 2 inches, 100 percent of the material passes a one-inch sieve and at least 90 percent passes the No. 10 sieve.

Where subsoils have been compacted by equipment operations or locations along old road beds; or when plans call for using seed mixture 70, 70A, 75, or 80, or seed mixtures containing Forbes species; perform subsoiling prior to placing topsoil. Perform subsoil operations to break up and turn over surface soils to a minimum depth of 12 inches. Perform subsoiling in one direction, perpendicular to the flow of water and along slopes flatter than 1:2 (V:H). Create channels no greater than 3 ft apart.

Remove rocks, twigs, foreign material, and clods that cannot be broken down. Dress the entire surface to present a uniform appearance. The engineer will not require rolling.

If light sandy soils are covered with heavier clay bearing loam topsoil, then mix or blend the 2 types of soils to a more or less homogeneous mixture by using the appropriate equipment.

*Replace the section titled* **E Payment** *with the following:*

**E Payment**

The department will pay for measured quantities at the contract unit price under the following bid items:

| ITEM NUMBER | DESCRIPTION | UNI |
|---|---|---|
| SPV.0180.0200 | Topsoil Special | SY |

Payment for Topsoil is full compensation for removing, stockpiling, reclaiming, providing, processing, excavating, loading, hauling, and placing this material; for subsoiling; and for undercutting excavations, or underfilling embankments necessary to receive this material. The department will make no allowance, adjustment, or measurement for payment under the Excavation bid items for undercutting cut sections, underfilling embankments, or deductions for materials obtained from areas of cut sections.

If an area is damaged by erosion after partial acceptance, the department will pay for restoring topsoil in these areas at a unit price determined by multiplying the contract unit price bid for Topsoil multiplied by 3, the department will pay for restoration under the Restoration Post Acceptance Topsoil administrative item.

The department will not pay for removing topsoil from outside the roadway foundation in embankment areas unless that material is necessary to cover the slopes.
SEF Rev.14_0922

## 407. Seeding Establishment, Item SPV.0105.0055

**A Description**

This work includes providing proper care of all newly seeded areas for a period of two growing seasons.

**B Materials**

**C Construction**

Proper care of seeded areas consists of weeding, fertilizing seed mixture areas, repair of eroded areas, repair of mulch or erosion mats, and mowing grass once it reaches a height of 6-7 inches.

**C.1 Weeding**

Weeding consists of physically or chemically removing large sized (over 12” tall) weeds throughout the first growing season. Chemical removal shall consist of spot applications of a Glyphosate with a surfactant during the first year of maintenance.

Confine the overspray to an area less than 2 feet in diameter. Mark the overspray area and return in one week to reseed and water. Seed mix and application rate shall be the same as the original seeding.

Comply with all federal and state laws regarding safety, handling, applying and disposal of materials and/or containers.

**C.2 Fertilizing**
During the spring of the second season apply a liquid fertilizer-herbicide combination (weed and feed) when grass and weeds are actively growing to seed mixture areas. Apply when temperatures are between 55 and 75 degrees. Do not apply when wind speeds are greater than 5 mph to avoid overspray onto adjoining properties.

Place notice markers in the treated turf areas indicating that a fertilizer-herbicide has been applied and the date applied.

**C.3 Maintenance**
Inspect seeded areas after periods of rain. Report any erosion areas to the engineer and make the necessary clean-up of deposited soil (due the erosion), fill eroded areas to match surrounding grades, seed and mulch repaired areas.

Perform maintenance site visit requirements to the satisfaction of the engineer a minimum of once every two weeks for the months of May through October.

Notify the engineer at least two days before making a maintenance site visit.

Submit a written report to the engineer after each maintenance site visit. Ensure that the report documents the work performed during each visit; the number and location of bare spots, the amount of seed and mulch applied; and other information the engineer deems appropriate.

Mow grass once it has reached a height of 6-7 inches. Mow to a height of 4 inches. Repeat mowing when grass for the duration of the maintenance period.

Grass seeding in healthy condition at the end of the second growing season must cover 95% or greater, of the total seeded area.

One month prior to the end of the applicable turf seeding establishment period, the engineer will make a final inspection and accept or reject seeded areas not meeting coverage requirements.

Payment shall be made after contractor addresses all seeding and maintenance issues to the satisfaction of the engineer.

**D Measurement**
The department will measure Seeding Establishment by the lump sum acceptably completed.

**E Payment**
The department will pay for the measured quantity at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0105.0055 | Seeding Establishment | LS |

Payment is full compensation for weeding, both physically and chemically; for furnishing, storing, transporting, mixing and applying weeding chemicals and fertilizer;
for fertilizing; for inspections and reports; for erosion clean up and repair and for mowing.

## 408. Seeding Water, Item SPV.0120.0001

### A Description
This section describes furnishing and applying water to areas seeded using seed mixture No. 70A and seed mixture No. 80 on the shoulders, slopes, ditches, or at other designated locations as shown in the plans, the contract specifies or as the engineer directs and as hereinafter provided.

### B Materials
When watering seeded areas, use clean water, free of impurities or substances that might injure the seed or seedlings.

### C Construction
Furnish and apply water to seeded areas. After seeding and mulching, moisten the seeded areas thoroughly by sprinkling with water.

Water seeded areas sufficiently to maintain the soil moisture at a pre-determined level set by the engineer. Moisture level shall be measured by an electronic soil moisture gauge. Contractor to provide their own moisture gauge.

Engineer's and contractor's moisture gauges shall be calibrated with each other. Contractor shall provide a chart of the two gauge's corresponding numbers after calibration.

Keep all seeded areas thoroughly moist by watering or sprinkling if rainfall is not sufficient to achieve seed germination. Apply water in a manner to preclude washing or erosion.

### D Measurement
The department will measure Seeding Water by volume in gallons acceptably completed. The department will determine volume by engineer-approved meters or from tanks of known capacity.

### E Payment
The department will pay for measured quantities at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0120.0001 | Seeding Water | MGAL |

Payment for Seeding Water is full compensation for providing, hauling, and applying the water; for calibrating the moisture gauges; and for moisture testing.

**Schedule of Items**
Attached, dated September 14, 2015, are the revised Schedule of Items Pages 16, 17, 22, 23, 73, 74, 76, 97-99, 117, 125, and 128–142.

**Plan Sheets**
The following 8½ x 11-inch sheets are attached and made part of the plans for this proposal:
Revised: 4, 410, 737,1061-1064, 1081-1084, 1661-1667, 1737, 1812-1815, 1958-1964, 1968-1969, 2671, 3452, 3553, 3934, 4141, 4336-4337, and 4626-4843
Added: 1958A

END OF ADDENDUM

## GENERAL NOTES

NO TREES OR SHRUBS SHALL BE REMOVED WITHOUT APPROVAL OF THE ENGINEER.

ANY REINFORCEMENT LOCATED IN EXISTING CONCRETE PAVEMENT SHALL BE CONSIDERED INCIDENTAL TO THE REMOVING PAVEMENT ITEM, AND NO ADDITIONAL COMPENSATION WILL BE GRANTED.

THE LOCATIONS OF EXISTING AND PROPOSED UTILITY INSTALLATIONS AS SHOWN ON THE PLANS ARE APPROXIMATE. THERE MAY BE OTHER UTILITY INSTALLATIONS WITHIN THE PROJECT AREA THAT ARE NOT SHOWN.

NOTIFY DIGGERS HOTLINE AND AFFECTED UTILITIES PRIOR TO THE START OF WORK. ANY LOCAL MUNICIPAL UTILITY WHICH IS NOT A MEMBER OF THE DIGGERS HOTLINE MUST BE CONTACTED SEPARATELY.

WHEN THE QUANTITY OF HMA PAVEMENT OR BASE AGGREGATE IS MEASURED FOR PAYMENT BY THE TON, THE DEPTH OR THICKNESS OF THE LAYER SHOWN ON THE PLAN IS APPROXIMATE AND THE ACTUAL THICKNESS WILL DEPEND ON THE DISTRIBUTION OF THE MATERIAL AS DIRECTED BY THE ENGINEER.

THE QUANTITY OF TOPSOIL IS COMPUTED FROM MEASUREMENTS BETWEEN THE SUBGRADE SHOULDER POINTS AND THE SLOPE INTERCEPTS AS SHOWN ON THE CROSS SECTIONS PLUS 5 FEET FOR ROUNDING.

CURB HEIGHTS AT THE END OF CURB AND GUTTER SHALL BE TAPERED FROM 0 TO 4 INCHES OR 0 TO 6 INCHES IN 6 FEET.

CURB AND GUTTER GRADES ARE GIVEN TO THE FLANGE OF CURB AND GUTTER OR THEORETICAL FLANGE POINT OF INTEGRAL CURB AND GUTTER. CURB AND GUTTER RADII ARE MEASURED TO THE FLANGE OF CURB AND GUTTER OR THEORETICAL FLANGE POINT OF INTEGRAL CURB AND GUTTER.

EXISTING DRIVEWAYS AND FIELD ENTRANCES SHALL BE RESTORED IN KIND AS DIRECTED BY THE ENGINEER IN THE FIELD AND AT THE LOCATION DETERMINED BY THE ENGINEER.

PROVIDE A TYPICAL SIDEWALK CROSS SLOPE OF 1.5% WITH A CONSTRUCTION TOLERANCE OF +/- 0.5%.

BROKEN CONCRETE CONTAINING RE-BAR SHALL NOT BE USED AS RIPRAP MEDIUM.

CROSS SECTIONS SHOWN INCLUDE THE THICKNESS OF TOPSOIL WHERE REQUIRED. TOPSOIL SHALL BE REPLACED WITH 6-INCH TYPICAL DEPTH THROUGHOUT THE PROJECT.

A SAWED JOINT IS REQUIRED WHERE NEW HMA PAVEMENT MEETS EXISTING HMA PAVEMENT.

REMOVAL OF EROSION CONTROL DEVICES IS INCLUDED IN THE COST OF THEIR RESPECTIVE BID ITEMS.

RE-TOPSOIL OF GRADED AREAS, AS DESIGNATED BY THE ENGINEER, IMMEDIATELY AFTER GRADING IS COMPLETED WITHIN THOSE AREAS. SEED, FERTILIZE, AND EROSION MAT TOP-SOILED AREAS, AS DESIGNATED BY THE ENGINEER, WITHIN FIVE (5) CALENDAR DAYS AFTER PLACEMENT OF TOPSOIL. IF GRADED AREAS ARE LEFT EXPOSED FOR MORE THAN (14) CALENDAR DAYS, SEED THOSE AREAS WITH TEMPORARY SEED.

STOCKPILE EXCESS MATERIAL OR SPOILS ON UPLAND AREAS AWAY FROM WETLANDS, FLOODPLAINS AND WATERWAYS. STOCKPILED SOIL SHALL BE PROTECTED AGAINST EROSION. IF STOCKPILED MATERIAL IS LEFT FOR MORE THAN FOURTEEN (14) CALENDAR DAYS, SEED THE STOCKPILE WITH TEMPORARY SEED.

EROSION CONTROL BMPS ARE AT SUGGESTED LOCATIONS. THE ACTUAL LOCATIONS WILL BE DETERMINED BY THE CONTRACTOR'S ECIP AND BY THE ENGINEER. EROSION CONTROL BMPS SHALL BE MAINTAINED UNTIL PERMANENT VEGETATION IS ESTABLISHED OR UNTIL THE ENGINEER DETERMINES THAT THE BMP IS NO LONGER REQUIRED.

FERTILIZER SHALL NOT BE USED WITHIN 100' OF NAVIGABLE WATERWAYS OR WETLANDS.

WHEN DEFINING THE PAVEMENT STRUCTURE, THE BOTTOM OF THE BASE AGGREGATE DENSE IS CONSIDERED THE SUBGRADE LINE. THE SELECT CRUSHED MATERIAL LAYER IS A SUBGRADE IMPROVEMENT.

CONTACT THE PROJECT ENGINEER AND THE SOUTHEASTERN WISCONSIN REGIONAL PLANNING COMMISSION (SEWRPC) AT LEAST TWO WEEKS PRIOR TO WORK NEAR ANY PUBLIC SURVEY MONUMENT.

SAWCUT ASPHALTIC AND CONCRETE DRIVEWAYS AND/OR PARKING LOTS AT THE MATCHLINE AS SHOWN ON THE PAVING DETAILS OR AS DIRECTED BY THE ENGINEER.

PROVIDE A CONCRETE JOINT DETAIL PLAN 14 DAYS PRIOR TO PAVING FOR APPROVAL BY THE ENGINEER. 15' MAXIMUM SPACING FOR LONGITUDINAL JOINTS.

CONCRETE PAVEMENT TINING SHALL BE LONGITUDINAL.

VERIFY EXISTING PAVEMENT ELEVATIONS AT ALL TIE-INS TO EXISTING PAVEMENT PRIOR TO CONSTRUCTION. IF A DISCREPANCY IS FOUND BETWEEN PROPOSED PLAN ELEVATIONS AND EXISTING PAVEMENT ELEVATIONS, CONTRACTOR IS TO NOTIFY ENGINEER.

THERE ARE NO RUMBLE STRIPS ALLOWED IN MILWAUKEE COUNTY. DIAGONAL PAVEMENT MARKING WILL BE USED ON SHOULDERS.

EXISTING BUSINESS SIGNS LOCATED WITHIN THE TLE ARE TO REMAIN UNLESS SHOWN IN THE REMOVAL PLAN.

THE EXACT LOCATION OF EXCAVATION BELOW SUBGRADE (EBS) WILL BE DETERMINED BY THE ENGINEER.

ALL PRIVATE EXISTING UTILITIES ARE TO BE ADJUSTED BY THE UTILITIES CONCERNED.

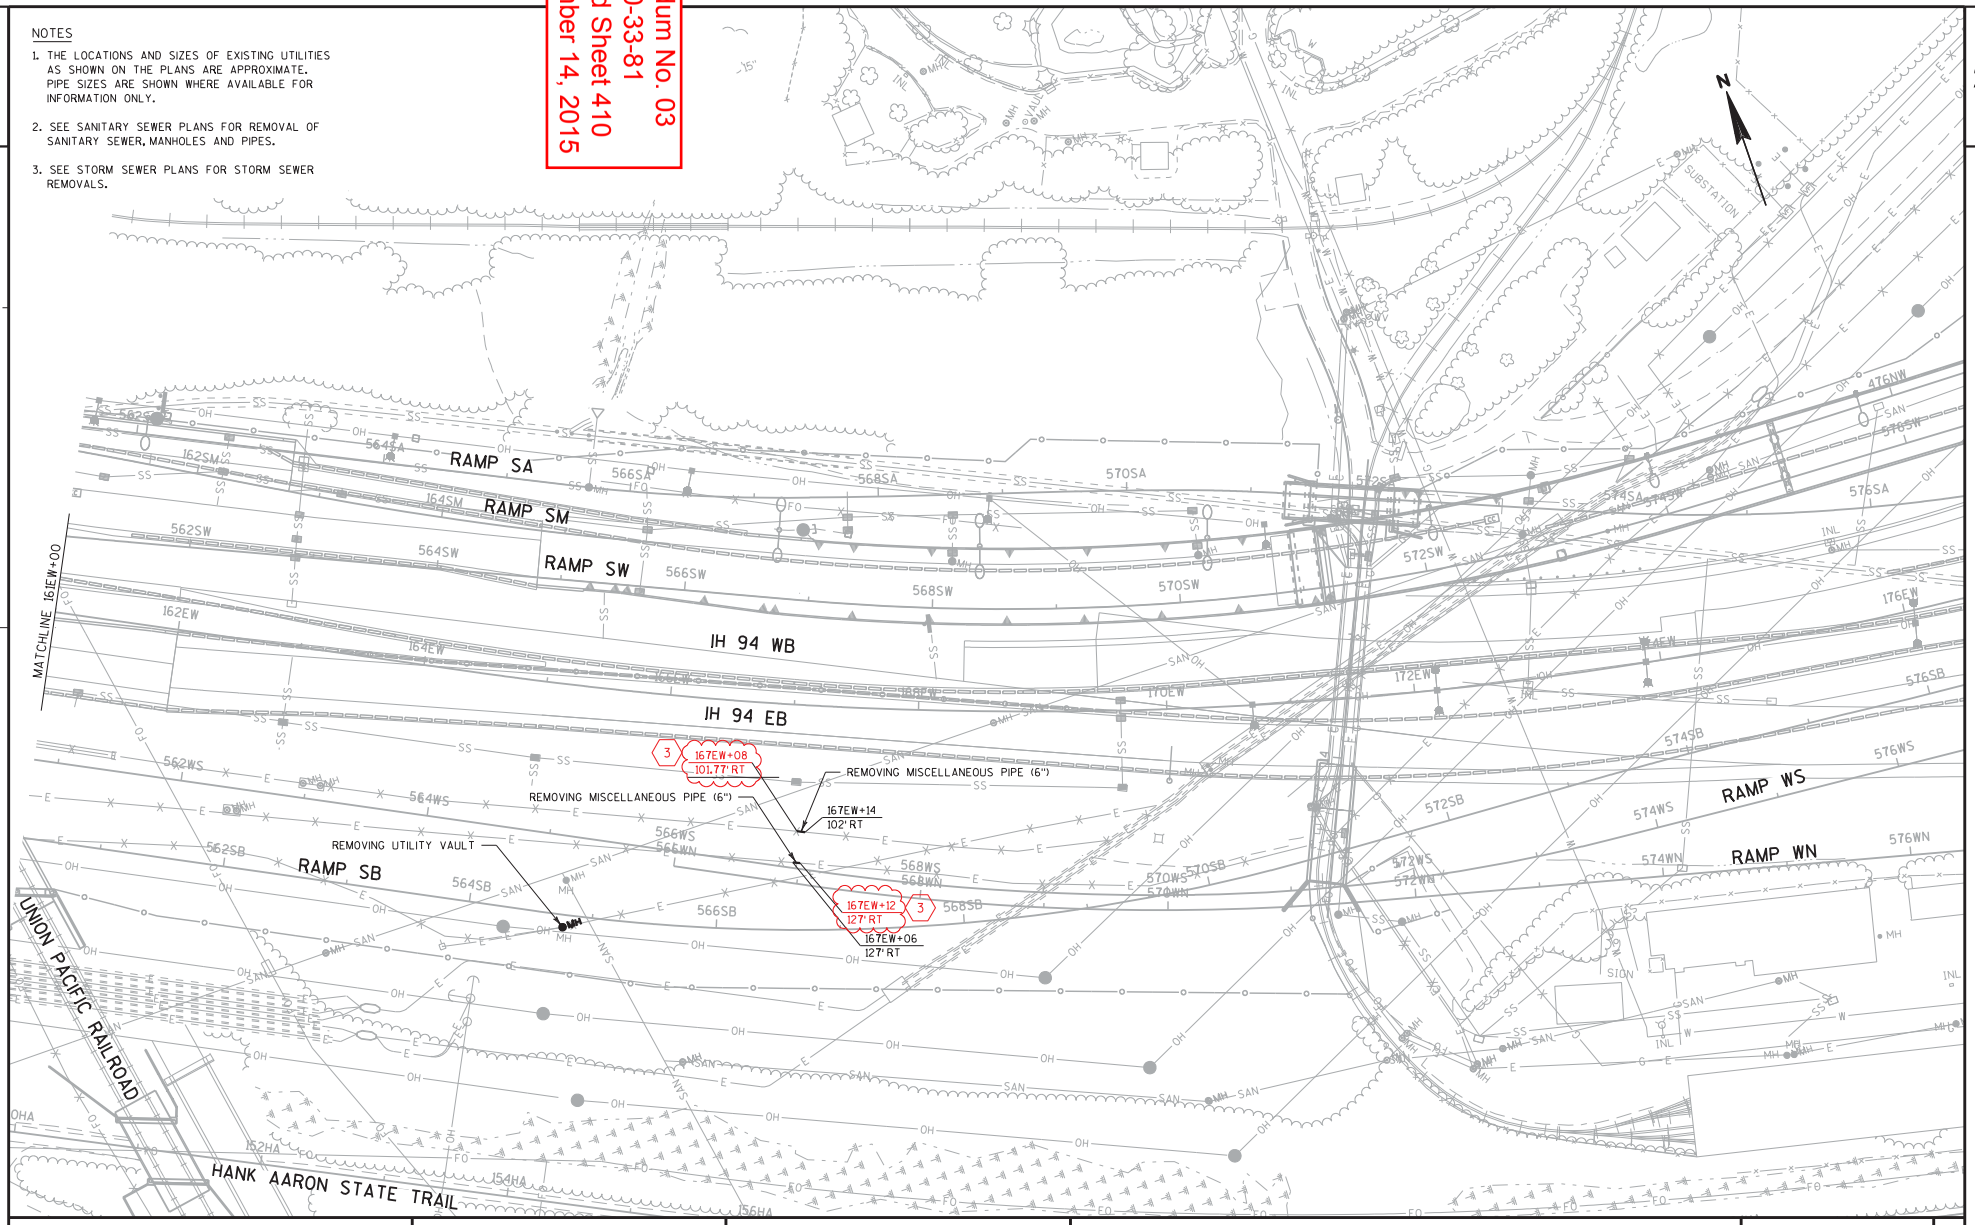
DESIGN, PLANS, SPECIFICATIONS AND QUANTITIES FOR PERMANENT SIGNING PROVIDED BY WISDOT SE REGION. DESIGN, PLANS, SPECIFICATIONS AND QUANTITIES FOR ALL REMAINING ITEMS PROVIDED BY, OR UNDER THE DIRECT SUPERVISION OF, FORWARD 45.

WHEN REMOVING RIGHT-OF-WAY FENCING ADJACENT TO THE MILWAUKEE COUNTY ZOO, USE AN 8-FOOT TALL FENCE FOR BOTH PERMANENT AND TEMPORARY FENCING. ENSURE TEMPORARY FENCING IS IN PLACE PRIOR TO REMOVAL OF EXISTING FENCE.

UITLITY TRENCH PAVEMENT RESTORATION SHALL BE CONSTRUCTED WITH ASPHALTIC SURFACE 5-INCH ON BASE AGGREGATE DENSE 1 1/4-INCH, 10-INCH.

A SOIL EXPANSION FACTOR OF 1.1 WAS USED TO GENERATE ESTIMATED EARTHWORK QUANTITIES. DUE TO POTENTIAL SOIL VARIABILITY, ACTUAL QUANTITIES MAY VARY. NO QUANTITY ADJUSTMENTS WILL BE MADE FOR DIFFERING SOIL EXPANSION FACTORS ENCOUNTERED IN THE FIELD. 3

CONSTRUCT HMA PAVEMENT WITH THE FOLLOWING LAYERS AND GRADATIONS:



| PAVEMENT TYPE | TOTAL LAYER PAVEMENT THICKNESS | LAYERS | NOMINAL MAXIMUM SIZE GRADATION | ASPHALTIC MATERIAL |
|---|---|---|---|---|
| E-1 | 3" | ONE 3" LAYER | 19.0 MM | PG-64-28 |

**NOTES:**

1) Salvaged/Unsuable Pavement Material is included in Cut.
3) EBS Excavation SPV.00350100 (CY) to be backfilled with EBS Backfill SPV.0035.0101 (CY). EBS Excavation volume assumed as 5% of total roadway area at an average depth of 18-inches, in addition to locations shown in plans. All EBS Excavation to be wasted offsite. EBS Backfill Factor = 1.00.
Actual extents and depths of EBS Excavation will be determined by the engineer in the field.
4) Available Material = Cut - Salvaged/Unusuable Pavement Material
5) The backfill needed to construct the mechanically stabilized earth walls has been estimated. The MSE backfill quantity has been subtracted from the fill volume in all end area calculations. The width of the MSE backfill off of the back of the MSE wall has been estimated as 0.8 times the height of the retaining walls.
6) Expanded Fill. Factor = 1.20 Expanded Fill = Unexpanded Fill * Fill Factor
7) The Mass Ordinate + or - Qty calculated for the Division. Plus quantity indicates an excess of material within the Division. Minus indicates a shortage of material within the Division.
8) The storm sewer excavation is estimated to be between 75,000 and 125,000 cubic yards and total structural excavation from all structures is estimated to be between 75,000 and 100,000 cubic yards dependant on the means and methods used for construction. These quantities are not included in this table and should be considered additional waste that is incidental to the storm sewer and structure items.
9) A soil expansion factor of 1.1 was used to generate estimated earthwork quantities. Due to potential soil variability, actual quantities may vary. No quantity adjustments will be made for differing soil expansion factors encountered in the field. 3

Addendum No. 03
ID 1060-33-81
Revised Sheet 1969
September 14, 2015

| STATE PROJECT NUMBER |
|---|
| 1060-33-81 |

## GENERAL

G.1. DRAWINGS SHALL NOT BE SCALED.

G.2. ALL DIMENSIONS ARE IN FEET AND INCHES UNLESS NOTED OTHERWISE.

G.3. COORDINATES ON THIS PLAN ARE REFERENCED TO THE WISCONSIN COUNTY COORDINATE SYSTEM (WCCS), MILWAUKEE COUNTY ZONE, NAD 83 (2007). ALL STATIONS AND ELEVATIONS ARE IN FEET. ELEVATIONS ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM NAVD 88 (2007).

G.4. DIRECTIONS IN THE PLANS REFERRING TO 'LEFT' AND 'RIGHT' ARE WITH RESPECT TO THE REFERENCE LINE WHEN LOOKING UP STATION.

G.5. TRANSVERSE DIMENSIONS TO THE REFERENCE LINE ARE RADIAL (ON A CURVE) OR NORMAL (ON A TANGENT) UNLESS NOTED OTHERWISE.

G.6. THE UTILITY INFORMATION SHOWN ON THESE DRAWINGS CONCERNING TYPE AND LOCATION OF UTILITIES IS NOT GUARANTEED TO BE ACCURATE OR ALL-INCLUSIVE. THE CONTRACTOR IS RESPONSIBLE FOR MAKING THEIR OWN DETERMINATION AS TO TYPE AND LOCATION OF UTILITIES AS MAY BE NECESSARY TO AVOID DAMAGE. UTILITIES LABELED AS PROPOSED MAY BE INSTALLED BY OTHERS PRIOR TO THIS CONTRACT.

G.7. THE CONTRACTOR MUST COORDINATE THE CONSTRUCTION OF BRIDGE B-40-787 WITH PROPOSED WALL R-40-535, PROPOSED BRIDGES B-40-786 AND B-40-856, AND PROPOSED SIGN BRIDGE S-40-96. SEE STRUCTURE PLANS.

G.8. SEE CONSTRUCTION STAGING SHEETS FOR INFORMATION ON ASSUMED CONSTRUCTION SEQUENCE.

## EXCAVATION AND BACKFILL

EB.1. THE UPPER LIMITS OF "EXCAVATION FOR STRUCTURES, BRIDGES B-40-787" SHALL BE AS FOLLOWS:
PIERS: AS DEFINED ON THE EXCAVATION PLAN SHEETS

EB.2. (3) THE EXISTING ABANDONED 6 INCH DIAMETER STEEL ELECTRICAL CONDUIT CASING UNDER THE WEST ABUTMENT MUST BE REMOVED PRIOR TO DRIVING PILES. THE COST OF THIS REMOVAL IS PAID FOR IN THE ROADWAY BID ITEM SPV.0090.0016 "REMOVING MISCELLANEOUS PIPE". SEE REMOVAL PLANS - UTILITIES FOR REMOVAL LOCATIONS.

EB.3. AT THE BACK FACE OF ABUTMENT, ALL VOLUME WHICH CANNOT BE PLACED BEFORE ABUTMENT CONSTRUCTION AND IS NOT OCCUPIED BY THE NEW BRIDGE OR RETAINING WALL REINFORCED ZONE SHALL BE BACKFILLED WITH STRUCTURE BACKFILL.

## DESIGN

D.1. DESIGN IS IN ACCORDANCE WITH AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS 6TH EDITION, 2012, UNLESS NOTED OTHERWISE.

D.2. TEMPERATURE CHANGE USED FOR DETERMINING SUBSTRUCTURE FORCES = 90°F.

D.3. ABSOLUTE TEMPERATURE RANGE FOR DETERMINING BEARING AND EXPANSION JOINT MOVEMENTS = -30°F TO +120°F.

D.4. DESIGN ASSUMED 10 PSF FOR TEMPORARY FORMWORK IN ADDITION TO STAY-IN-PLACE FORMS.

D.5. LIVE LOAD DEFLECTION LIMIT = SPAN/800 (HL93)

## STRUCTURAL STEEL

SS.1. STEEL GRADE FOR ALL PLATES AND ROLLED SHAPES SHALL BE ASTM A709 GRADE 50.

SS.2. STEEL GRADES FOR BEARING COMPONENTS SHALL BE AS NOTED ON THE BEARING SHEETS.

SS.3. CHARPY V-NOTCH TOUGHNESS REQUIREMENTS FOR ALL STEEL SHALL CONFORM TO THE REQUIREMENTS FOR ZONE 2.

SS.4. ALL BOLTS SHALL BE ASTM A325-X TYPE 1. BOLTS SHALL BE 1" DIAMETER UNLESS NOTED OTHERWISE. ALL HOLES SHALL BE STANDARD DIAMETER - NO OVERSIZED HOLES. ALL CONNECTIONS SHALL BE FABRICATED AND ASSEMBLED AS SLIP-CRITICAL CONNECTIONS. DESIGN ASSUMED CLASS B FAYING SURFACE FOR SLIP RESISTANCE.

SS.5. PAINT ALL STRUCTURAL STEEL. FINISH COAT SHALL HAVE A COLOR TO MATCH SHERWIN WILLIAMS COLOR "SW6523", GLOSSY FINISH.

SS.6. ALL GIRDER FIELD PIECES WHICH WILL BE CAST INTO CONCRETE AT INTEGRAL POST-TENSIONED PIER CAPS SHALL BE METALIZED AND PAINTED. SEE SPECIAL PROVISIONS FOR SURFACE PREPARATION.

SS.7. CAMBER DIAGRAMS HAVE BEEN DEVELOPED ASSUMING A CONSTANT 4" HAUNCH HEIGHT, MEASURED FROM THE UNDERSIDE OF THE TOP FLANGE TO THE UNDERSIDE OF THE DECK. ANY ADDITIONAL QUANTITIES REQUIRED AS A RESULT OF VARIATION IN THE HAUNCH HEIGHT ARE ASSUMED TO BE INCIDENTAL TO OTHER PAY ITEMS AND WILL NOT BE PAID FOR SEPARATELY. THIS INCLUDES ADDITIONAL CONCRETE IN THE HAUNCH, ADDITIONAL OR MORE COMPLICATED FORM WORK, EXTRA SHEAR STUD LENGTH AND ANY REQUIRED REINFORCEMENT IN THE HAUNCH.

SS.8. ALL PLAN DIMENSIONS ARE BASED ON THE FINAL DEFLECTED SHAPE AT 60° F. UNLESS OTHERWISE NOTED, PLAN DIMENSIONS ARE IN THE HORIZONTAL PLANE AND DO NOT ACCOUNT FOR ARC LENGTH ALONG THE CURVED VERTICAL PROFILE.

## REINFORCING STEEL

RS.1. ALL REINFORCING BARS ARE ENGLISH DESIGNATION AND THE FIRST DIGIT OF A 3-DIGIT BAR MARK OR THE FIRST TWO DIGITS OF A 4-DIGIT BAR MARK SIGNIFY THE BAR SIZE.

RS.2. BAR STEEL REINFORCEMENT SHALL BE EMBEDDED 2" CLEAR UNLESS NOTED OTHERWISE.

RS.3. FOR BARS NOTED IN THE BILL OF BAR TABLES AS STAINLESS STEEL, PROVIDE STAINLESS STEEL REINFORCEMENT PER THE SPECIAL PROVISION "BAR STEEL REINFORCEMENT HS STAINLESS STRUCTURES".

RS.4. FOR PRESTRESSING NOTES, SEE PIER SHEETS.

## CONCRETE

C.1. THE HAUNCH CONCRETE QUANTITY IS BASED ON AN AVERAGE HAUNCH DEPTH OF 4" MEASURED FROM TOP OF WEB TO UNDERSIDE OF SLAB (EXCLUDING THE VOLUME TAKEN UP BY THE TOP FLANGE) WHICH IS THE MAXIMUM HAUNCH QUANTITY FOR WHICH THE CONTRACTOR WILL BE PAID.

C.2. THE PARAPET CONCRETE QUANTITY FOR PARAPET ON THE DECK, ABUTMENT BACKWALL, AND APPROACH SLAB SHALL BE PAID FOR UNDER BID ITEM "HPC MASONRY STRUCTURES".

C.3. THE CONCRETE QUANTITY FOR APPROACH SLAB FOOTING SHALL BE PAID FOR UNDER BID ITEM "CONCRETE MASONRY BRIDGES". THE REMAINING CONCRETE QUANTITY FOR APPROACH SLAB SHALL BE PAID FOR UNDER BID ITEM "HPC MASONRY STRUCTURES".

C.4. CONCRETE ABOVE THE ABUTMENT UPPER BACKWALL CONSTRUCTION JOINT SHALL BE PAID FOR UNDER BID ITEM "HPC MASONRY STRUCTURES". THE REMAINING CONCRETE QUANTITY FOR ABUTMENT SHALL BE PAID FOR UNDER BID ITEM "CONCRETE MASONRY BRIDGES".

C.5. THE CONCRETE QUANTITY FOR THE PIERS SHALL BE PAID FOR UNDER BID ITEM "CONCRETE MASONRY BRIDGES". THIS INCLUDES INTEGRAL PIER CAPS.

C.6. CHAMFER ALL EXPOSED OUTSIDE CORNERS ¾" UNLESS NOTED OTHERWISE.

## FOUNDATION DATA

DRIVEN PILES:

FD.1. ABUTMENTS SHALL BE SUPPORTED ON 16" DIA CIP CONCRETE PILING DRIVEN TO THE FOLLOWING REQUIRED DRIVING RESISTANCE AS DETERMINED BY THE PDA/CAPWAP METHOD.

REQUIRED DRIVING RESISTANCE:
WEST ABUTMENT: 246 TONS

FD.2. THE FACTORED AXIAL RESISTANCE OF PILES IN COMPRESSION USED FOR DESIGN IS THE REQUIRED DRIVING RESISTANCE MULTIPLIED BY A RESISTANCE FACTOR OF 0.65 USING THE PDA/CAPWAP METHOD TO DETERMINE DRIVEN PILE CAPACITY.

FD.3. ESTIMATED PILE LENGTHS:
WEST ABUTMENT: 80 FEET

FD.4. AT THE WEST ABUTMENT, IT IS ANTICIPATED THAT PILES WILL BE DRIVEN PRIOR TO CONSTRUCTION OF MSE WALL R-40-535. PILE DRIVING THROUGH MSE FILL WITHOUT SLEEVES IS PROHIBITED.

FD.5. PILE SPLICES SHALL BE MADE BY A CERTIFIED WELDER.

DRILLED SHAFTS:

FD.6. PIERS SHALL BE SUPPORTED ON BASE GROUTED DRILLED SHAFTS. SHAFT DIAMETERS, FACTORED AXIAL RESISTANCES, TOP OF SHAFT AND BOTTOM OF SHAFT ELEVATIONS, AND CORRESPONDING SHAFT LENGTHS FOR EACH DRILLED SHAFT ARE GIVEN IN THE TABLE BELOW.

FD.7. THE MINIMUM FACTORED AXIAL RESISTANCE OF DRILLED SHAFTS IN COMPRESSION USED FOR DESIGN IS THE REQUIRED AXIAL RESISTANCE MULTIPLIED BY A SHAFT RESISTANCE FACTOR OF 0.56. THE RESISTANCE FACTOR INCLUDES A 20% REDUCTION FOR NON-REDUNDANCY.

FD.8. SUCCESSFUL INSTALLATION AND ENGINEER ACCEPTANCE OF THE ITEM "TRIAL DRILLED FOUNDATION SHAFT, 118.11-INCH", INCLUDED IN THIS CONTRACT WITH THE QUANTITIES FOR B-40-854, IS REQUIRED PRIOR TO BEGINNING THE CONSTRUCTION OF THE ITEM "DRILLED FOUNDATION SHAFT 59.06-INCH" FOR B-40-787.

### NOTES

THIS CONTRACT CONTAINS TWO OPTIONS FOR PIER CONSTRUCTION.
THE CONTRACTOR MUST BID EITHER OPTION A OR OPTION B.

ITEMS ON THIS SHEET ARE FOR PIER OPTION B ONLY. FOR
ADDITIONAL ITEMS AND QUANTITIES, SEE SHEET 5.

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

BRIDGE B-40-861 PIER FOOTING AND COLUMN TO BE CONSTRUCTED PRIOR TO B-40-860 SOUTH ABUTMENT

BAR STEEL REINFORCEMENT WILL BE PLACED WITH 2" OF CLEAR CONCRETE COVER UNLESS OTHERWISE NOTED.

BEVEL EXPOSED EDGES OF CONCRETE ¾" UNLESS OTHERWISE NOTED.

ALL DIMENSIONS ARE IN FEET AND INCHES UNLESS OTHERWISE NOTED.

ALL STATIONS AND ELEVATIONS ARE IN FEET. ELEVATIONS REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD).

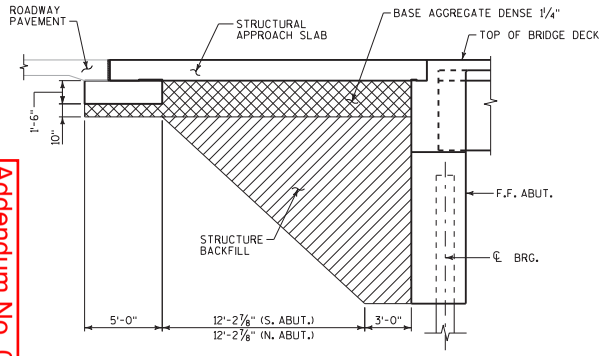
THE UTILITY INFORMATION SHOWN ON THESE DRAWINGS CONCERNING TYPE AND LOCATION OF UNDERGROUND UTILITIES IS NOT GUARANTEED TO BE ACCURATE OR ALL-INCLUSIVE. THE CONTRACTOR IS RESPONSIBLE FOR MAKING HIS OWN DETERMINATION AS TO TYPE AND LOCATION OF UNDERGROUND UTILITIES AS MAY BE NECESSARY TO AVOID DAMAGE.

ALL REINFORCING BARS ARE ENGLISH. THE FIRST DIGIT OF A THREE DIGIT BAR MARK OR THE FIRST TWO DIGITS OF A FOUR DIGIT BAR MARK SIGNIFY THE BAR SIZE.

THE EXISTING GROUNDLINE SHALL BE THE UPPER LIMIT OF EXCAVATION FOR STRUCTURES.

AT THE BACK FACE OF ABUTMENT, ALL SPACES EXCAVATED AND NOT OCCUPIED BY THE NEW STRUCTURE SHALL BE BACKFILLED WITH STRUCTURE BACKFILL.

THE SLOPE OF THE FILL IN FRONT OF THE ABUTMENTS SHALL BE COVERED WITH SLOPE PAVING MATERIAL TO THE EXTENT SHOWN ON THE "SLOPE PAVING AT HANK AARON STATE TRAIL" CONSTRUCTION DETAILS IN ROADWAY PLAN SET. NOT A BRIDGE ITEM.



RODENT SHIELD SHALL BE CONSIDERED INCIDENTAL TO THE BID ITEM "PIPE UNDERDRAIN WRAPPED 6-INCH"

THE HAUNCH CONCRETE QUANTITY IS BASED ON THE AVERAGE HAUNCH SHOWN ON THE PRESTRESSED GIRDER DETAIL SHEET.

THE PARAPET CONCRETE QUANTITY FOR SINGLE SLOPE 42SS MODIFIED SHALL BE PAID FOR UNDER BID ITEM "HPC MASONRY STRUCTURES".

THE EXISTING STRUCTURE TO BE REMOVED IS A THREE SIDED BOX CULVERT TEMPORARILY INSTALLED OVER THE HANK AARON STATE TRAIL.

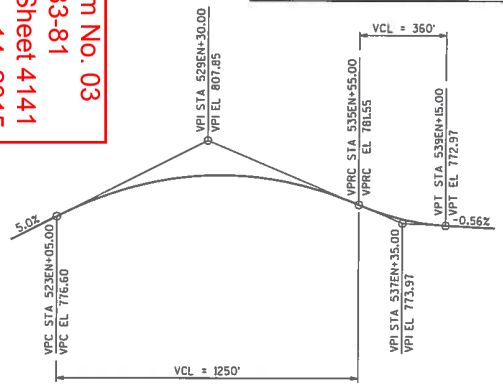
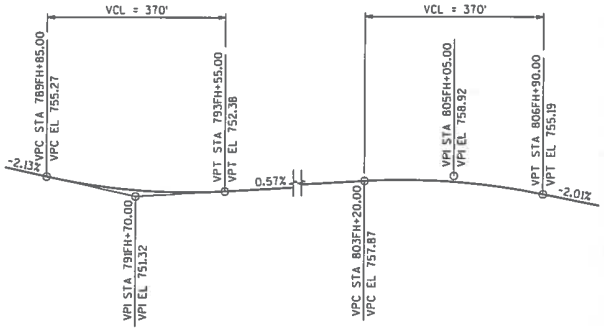
## DESIGN DATA:



DESIGN SPECIFICATIONS:
AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS, 6TH EDITION, 2012

LIVE LOAD:
LIVE LOAD SURCHARGE (ROADWAY): 240 PSF



MATERIAL PROPERTIES:
CONCRETE MASONRY RETAINING WALL f'c = 4,000 PSI
PRECAST CONCRETE WALL PANELS f'c = 4,000 PSI
BAR STEEL REINFORCEMENT fy = 60,000 PSI

DESIGN THE MSE WALL IN FRONT OF THE ABUTMENT BODY TO RESIST THE FORCE FROM ALL HORIZONTAL EARTH PRESSURE ACTING ON THE BACK OF THE ABUTMENT BELOW BEAM SEATS AND LIVE LOAD VERTICAL SURCHARGE OF 240 PSF.

DESIGN THE MSE WALL ADJACENT TO NORTH ABUTMENT OF BRIDGE B-40-850 FOR A HORIZONTAL BACKSLOPE BEHIND THE WALL AND A LIVE LOAD VERTICAL SURCHARGE OF 240 PSF.

PROFILE GRADE LINE RAMP EN
R/L 'EN'

PROFILE GRADE LINE RAMP FH
R/L 'FH'

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

COORDINATES ON THIS PLAN ARE REFERENCED TO THE WISCONSIN COUNTY COORDINATE SYSTEM (WCCS), MILWAUKEE COUNTY ZONE, NAD 83 (2007). ALL STATIONS AND ELEVATIONS ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM NAVD 88 (2007).

ALL DIMENSIONS ARE ALONG THE FRONT FACE OF WALL, UNLESS SHOWN OTHERWISE.

THE UTILITY INFORMATION SHOWN ON THESE DRAWINGS CONCERNING TYPE AND LOCATION OF UNDERGROUND UTILITIES IS NOT GUARANTEED TO BE ACCURATE OR ALL-INCLUSIVE. THE CONTRACTOR IS RESPONSIBLE FOR MAKING THEIR OWN DETERMINATIONS AS TO TYPE AND LOCATION OF UNDERGROUND UTILITIES AS MAY BE NECESSARY TO AVOID DAMAGE. UTILITIES LABELED AS PROPOSED MAY BE INSTALLED BY OTHERS PRIOR TO THIS CONTRACT.

THESE PLANS ARE FOR A PRECAST CONCRETE PANEL MECHANICALLY STABILIZED EARTH (MSE) RETAINING WALL.

PLANS, ELEVATIONS AND DETAILS SHOWN ON THESE DRAWINGS ARE INTENDED TO INDICATE WALL LOCATIONS, LENGTHS, HEIGHTS AND DETAILS COMMON TO THE WALL SYSTEM SELECTED. THE CONTRACTOR SHALL VERIFY THAT THE WALL SYSTEM SELECTED WILL CONFORM TO THE REQUIRED ALIGNMENTS AND DETAILS.

SEE SPECIAL PROVISIONS FOR AESTHETIC TREATMENT TO WALL.

THE CONTRACTOR SHALL PROVIDE COMPLETE DESIGN, PLANS, DETAILS, AND SHOP DRAWINGS FOR THE RETAINING WALL IN ACCORDANCE WITH THE SPECIAL PROVISIONS. THE RETAINING WALL MANUFACTURER SHALL PROVIDE TECHNICAL ASSISTANCE TO THE CONTRACTOR DURING CONSTRUCTION. THESE ITEMS ARE INCLUDED IN THE BID ITEM WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD.

THE COST OF ALL EXCAVATION REQUIRED TO INSTALL THE MSE RETAINING WALL IS INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/QMP".

THE COST OF FURNISHING AND PLACING THE UNREINFORCED CONCRETE LEVELING PAD UNDER THE MSE PRECAST WALL PANELS IS INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/QMP".

THE COST OF FURNISHING AND PLACING MSE BACKFILL WITHIN THE REINFORCED SOIL ZONE IS TO BE INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/QMP".

THE PLAN QUANTITY FOR THE ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/QMP" IS BASED ON A WALL HEIGHT MEASURED FROM THE TOP OF THE LEVELING PAD TO THE TOP OF WALL AS SHOWN IN THE PLANS. THE TOP OF LEVELING PAD IS ASSUMED TO BE AT LEAST 2'-0" BELOW FINISHED GRADE FOR SEGMENT A AND C AND 3'-0" FOR SEGMENTS B. (3)

THE MAXIMUM VALUE OF THE ANGLE OF INTERNAL FRICTION OF THE BACKFILL MATERIAL IN THE REINFORCED ZONE SHALL BE ASSUMED TO BE 30° WITHOUT CERTIFIED TEST VALUES.

ONLY WALL CONCRETE PANEL MSE WALL SYSTEMS THAT USE STRIP TYPE SOIL REINFORCEMENT THAT ARE HINGED AT THE PANEL CONNECTION CAN BE USED FOR THIS PROJECT.

SOIL REINFORCEMENT MAY BE PLACED UP TO A MAXIMUM OF 15° FROM PERPENDICULAR IF NECESSARY TO AVOID INTERFERENCE WITH ITEMS BEHIND THE WALL. ANGLES GREATER THAN 15° REQUIRE APPROVAL FROM THE BUREAU OF STRUCTURES DESIGN SECTION.

WALL SEGMENT DESIGNATIONS DO NOT CORRESPOND TO ROADWAY STAGING DESIGNATIONS.

THE QUANTITIES AND REINFORCEMENT DETAILS ARE BASED ON AN ASSUMED CONCRETE WALL PANEL THICKNESS OF 7 INCHES. FOR PANEL THICKNESSES DIFFERENT THAN 7 INCHES, THE CONTRACTOR SHALL VERIFY REINFORCEMENT BAR DETAILS AND QUANTITIES AND WILL BE RESPONSIBLE FOR ANY QUANTITY VARIATIONS.

CONCRETE MASONRY AND BAR STEEL REINFORCEMENT FOR THE CAST-IN-PLACE COPING IS INCIDENTAL TO THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/QMP".

BAR STEEL REINFORCEMENT IN THE COPING SHALL BE EPOXY COATED.

BAR STEEL REINFORCEMENT SHALL HAVE 2" CLEAR COVER, UNLESS SHOWN OTHERWISE.

BEVEL ALL EXPOSED EDGES OF CONCRETE ¾" UNLESS OTHERWISE SHOWN OR NOTED.

THE FIRST OR FIRST TWO DIGITS OF THE BAR MARK SIGNIFIES THE BAR SIZE. BAR DIMENSIONS ARE OUT TO OUT OF BAR.

COORDINATE THE CONSTRUCTION OF WALL R-40-507 WITH THE CONSTRUCTION OF THE NORTH ABUTMENT OF BRIDGE B-40-850, PROPOSED LIGHTING CONDUITS AND FOOTINGS.

SEE STANDARD DETAIL FOR NAME PLATE DETAILS.

THE STANDARD PANEL SIZE SHALL BE 5'HIGH X 5'WIDE. 5'HIGH X 10'WIDE PANELS WILL NOT BE ALLOWED.

## WALL EXTERNAL STABILITY EVALUATION

| DIMENSIONS | EVALUATED LOCATIONS | | | |
|---|---|---|---|---|
| WALL HEIGHT (FEET) | 28.6 | 36 | 17.1 | 14.2 |
| EXPOSED WALL HEIGHT (FEET) | 26.6 | 33 | 14.1 | 11.2 |
| MINIMUM LENGTH OF REINFORCEMENT (FEET) * | 20 | 26.0 | 13.5 | 9.9 |
| WALL STATION | 798FH+50 | 799FH+00 | 800FH+00 | 801FH+50 |
| BORING USED | CB-17 | CB-17 | CB-5 | CB-18 |
| CAPACITY TO DEMAND RATIO (CDR) | | | | |
| ECCENTRICITY (CDR > 1.0) | 1.28 | 1.33 | 1.02 | 1.36 |
| DRAINED BEARING CAPACITY (CDR > 1.0) | 1.71 | 1.96 | 1.48 | 2.21 |
| UNDRAINED BEARING CAPACITY (CDR > 1.0) | 1.14 | 1.09 | 1.22 | 1.47 |
| DRAINED SLIDING (CDR > 1.0) | 1.23 | 1.57 | 1.29 | 1.64 |
| UNDRAINED SLIDING (CDR > 1.0) | 1.21 | 1.46 | 1.53 | 1.97 |
| OVERALL/GLOBAL STABILITY (CDR > 1.0) | ------- | 1.02 | ---- | ----- |

---- GLOBAL STABILITY DEEMED NOT CRITICAL

* THE LENGTHS PROVIDED IN THE TABLE ARE THE MINIMUM REQUIRED REINFORCEMENT LENGTHS BASED UPON THE MINIMUM DESCRIBED IN THE WALL SYSTEM SPECIAL PROVISIONS OR EXTERNAL AND GLOBAL STABILITY AT THE DESIGNATED LOCATIONS. THESE DESIGNATED LOCATIONS REPRESENT TYPICAL AND CRITICAL WALL LOCATIONS, BUT SHALL NOT BE CONSIDERED ALL INCLUSIVE. THE CONTRACTOR DESIGNED LENGTHS SHALL MEET OR EXCEED THE MINIMUM VALUES REPRESENTED IN THE TABLE AT THESE DESIGNATED LOCATIONS.

## SOIL PARAMETERS

| SOIL DESCRIPTION | UNIT WEIGHT (PCF) | SHORT-TERM (UNDRAINED) UNDRAINED SHEAR STRENGTH (PSF) | SHORT-TERM (UNDRAINED) FRICTION ANGLE (DEGREES) | LONG-TERM (DRAINED) EFFECTIVE COHESION (PSF) | LONG-TERM (DRAINED) EFFECTIVE FRICTION ANGLE (DEGREES) |
|---|---|---|---|---|---|
| MSE BACKFILL | 120 | 0 | 30 | 0 | 30 |
| GRANULAR FILL | 120 | 0 | 30 | 0 | 30 |
| SAND FILL | 115-125 | 0 | 30 | 0 | 30-32 |

## NOTE:

* CONSTRUCTION OF RETAINING WALL R-40-532 MUST BE ACCOMPLISHED BENEATH ENERGIZED OVERHEAD TRANSMISSION LINES OWNED AND OPERATED BY THE AMERICAN TRANSMISSION COMPANY (ATC) AND WE ENERGIES. THE CONTRACTOR IS ADVISED THAT LOW OVERHEAD EQUIPMENT AND INSTALLATION TECHNIQUES MAY BE REQUIRED TO MAINTAIN SAFE CLEARANCES FROM THESE LINES. NOTIFY AND COORDINATE ALL CONSTRUCTION ACTIVITY WITH ATC PRIOR TO CONSTRUCTION.

## CONSTRUCTION PHASING NOTES

PHASE 1 - UPRR ACTIVITIES

1. INSTALL INSIDE GUARDRAIL SAFETY PROTECTION ON ALL TRACK RAILS THAT ARE WITHIN 25 FEET HORIZONTALLY OF THE PIER CRASH WALL.
2. INSTALL A TEMPORARY AT-GRADE CROSSING FOR CONSTRUCTION ACTIVITIES AT THE LOCATION ON THE "GENERAL PLAN & ELEVATION" SHEET.

PHASE 2 - CONTRACTOR ACTIVITIES

1. CONSTRUCT APPROACHES TO TEMPORARY AT-GRADE CROSSING.
2. CONSTRUCT TEMPORARY ACCESS GATE AND TEMPORARY FENCING.

PHASE 3 - UPRR ACTIVITIES

1. INSTALL A LOCK ON THE CONTRACTOR TEMPORARY ACCESS GATE THAT ACCESSES THE TEMPORARY AT-GRADE CROSSING. UPRR WILL OPEN THE LOCK ON EVERY OCCASION THAT THE CONTRACTOR NEEDS ACCESS AND A FLAGMAN IS PRESENT, AND CLOSE THE LOCK WHEN THE FLAGMAN LEAVES THE JOBSITE.

PHASE 4 - CONTRACTOR ACTIVITIES

1. SHIFT NB USH 45 TRAFFIC WEST ON EXISTING BRIDGE B-40-127. TWO LANES OF TRAFFIC MUST BE MAINTAINED ON THE EXISTING BRIDGE DURING STRUCTURE REMOVAL.
2. PERFORM PARTIAL REMOVAL OF THE EXISTING BRIDGE B-40-127 AS SHOWN IN PHASE 1 REMOVAL TYPICAL SECTION. DEBRIS CONTAINMENT WILL BE REQUIRED FOR THE REMOVAL.
3. CONSTRUCT PHASE 1 OF B-40-883 AND RETAINING WALLS R-40-532 AND R-40-534. TEMPORARY SHORING RAILROAD, TEMPORARY SHORING AND TEMPORARY WALL WIRE FACED MSE WILL BE REQUIRED FOR THE CONSTRUCTION. SEE R-40-532 AND R-40-534 PLANS FOR ADDITIONAL SHORING INFORMATION.
4. WHEN PHASE 1 CONSTRUCTION IS COMPLETED, THE REMAINDER OF BRIDGE B-40-127 WILL BE REMOVED. DEBRIS CONTAINMENT WILL BE REQUIRED FOR THE REMOVAL. PHASE 2 CONSTRUCTION OF B-40-883 AND RETAINING WALLS R-40-532 AND R-40-534 WILL THEN BE COMPLETED WHILE MAINTAINING 2 LANES OF TRAFFIC ON THE PHASE 1 PORTION OF THE PROPOSED BRIDGE.

PHASE 5 - UPRR ACTIVITIES

1. REMOVE THE LOCK AFTER THE TEMPORARY AT-GRADE CROSSING IS NO LONGER IN SERVICE.
2. REMOVE THE TEMPORARY AT-GRADE CROSSING.

PHASE 6 - CONTRACTOR ACTIVITIES

1. REMOVE THE TEMPORARY ACCESS GATE, TEMPORARY FENCING, AND TEMPORARY APPROACHES.

## RAILROAD NOTES

RR1. THE PROPOSED GRADE SEPARATION PROJECT SHALL NOT INCREASE THE QUANTITY AND/OR CHARACTERISTICS OF THE FLOW IN THE RAILROAD'S DITCHES AND/OR DRAINAGE STRUCTURES.

RR2. THE ELEVATION OF THE EXISTING TOP-OF-RAIL PROFILE SHALL BE VERIFIED BEFORE BEGINNING CONSTRUCTION. ALL DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE RAILROAD PRIOR TO CONSTRUCTION.

RR3. ALL SHORING SYSTEMS THAT IMPACT THE RAILROAD'S OPERATIONS AND/OR SUPPORTS THE RAILROAD'S EMBANKMENT SHALL BE DESIGNED AND CONSTRUCTED PER CURRENT RAILROAD GUIDELINES FOR TEMPORARY SHORING.

RR4. ALL DEMOLITIONS WITHIN THE RAILROAD'S RIGHT-OF-WAY AND/OR DEMOLITION THAT MAY IMPACT THE RAILROAD'S TRACKS OR OPERATIONS SHALL BE IN COMPLIANCE WITH THE RAILROAD'S DEMOLITION GUIDELINES.

RR5. ERECTION OVER THE RAILROAD'S RIGHT-OF-WAY SHALL BE DESIGNED TO MINIMIZE INTERRUPTION TO THE RAILROAD'S OPERATION, ENABLING THE TRACKS TO REMAIN OPEN TO TRAFFIC PER THE RAILROAD'S REQUIREMENTS.

RR6. RAILROAD REQUIREMENTS DO NOT ALLOW WORK WITHIN 50 FEET OF TRACK CENTERLINE WHEN A TRAIN PASSES THE WORK SITE AND ALL PERSONNEL MUST CLEAR THE AREA WITHIN 25 FEET OF THE TRACK CENTERLINE AND SECURE ALL EQUIPMENT.

RR7. ALL PERMANENT CLEARANCES SHALL BE VERIFIED BEFORE PROJECT CLOSING.

RR8. THE CONTRACTOR MUST SUBMIT A PROPOSED METHOD OF EROSION AND SEDIMENT CONTROL AND HAVE THE METHOD APPROVED BY THE RAILROAD PRIOR TO BEGINNING ANY GRADING ON THE PROJECT.

RR9. FALSE-WORK CLEARANCES SHALL COMPLY WITH MINIMUM CONSTRUCTION CLEARANCES.

RR10. FOR RAILROAD COORDINATION REFER TO THE RAILROAD'S COORDINATION REQUIREMENTS AS PART OF THE PROJECT SPECIAL PROVISIONS.

## GENERAL NOTES

DRAWINGS SHALL NOT BE SCALED.

BEVEL EXPOSED EDGES OF CONCRETE ¾" UNLESS NOTED OTHERWISE.

ALL STATIONS AND ELEVATIONS ARE IN FEET. ELEVATIONS ARE REFERENCED TO THE (NAVD) NORTH AMERICAN VERTICAL DATUM OF 1988.

ALL DIMENSIONS ARE IN FEET AND INCHES UNLESS OTHERWISE NOTED.

ALL DIMENSIONS ARE ALONG THE FRONT FACE OF WALL UNLESS SHOWN OTHERWISE.

BAR STEEL REINFORCEMENT SHALL HAVE 2" CLEAR COVER UNLESS SHOWN OTHERWISE.

ONLY WALL CONCRETE PANEL MSE WALL SYSTEMS THAT USE STRIP TYPE SOIL REINFORCEMENT THAT ARE HINGED AT THE PANEL CONNECTION CAN BE USED FOR THIS PROJECT.

THE UTILITY INFORMATION SHOWN ON THESE DRAWINGS CONCERNING TYPE AND LOCATION OF UNDERGROUND UTILITIES IS NOT GUARANTEED TO BE ACCURATE OR ALL INCLUSIVE. THE CONTRACTOR IS RESPONSIBLE FOR MAKING THEIR OWN DETERMINATIONS AS TO TYPE AND LOCATION OF UNDERGROUND UTILITIES AS MAY BE NECESSARY TO AVOID DAMAGE. UTILITIES LABELED AS PROPOSED MAY BE INSTALLED BY OTHERS PRIOR TO THIS CONTRACT.

THESE PLANS ARE FOR A PRECAST PANEL MECHANICALLY STABILIZED EARTH (MSE) RETAINING WALL.

THE QUANTITIES AND REINFORCEMENT DETAILS ARE BASED ON AN ASSUMED CONCRETE WALL PANEL THICKNESS OF 7 INCHES. FOR PANEL THICKNESSES DIFFERENT THAN 7 INCHES, THE CONTRACTOR SHALL VERIFY REINFORCEMENT BAR DETAILS AND QUANTITIES AND WILL BE RESPONSIBLE FOR ANY QUANTITY VARIATIONS.

THE CONTRACTOR MUST COORDINATE THE CONSTRUCTION OF WALL R-40-532 WITH THE CONSTRUCTION OF BRIDGES B-40-882, B-40-883 AND NOISE BARRIER N-40-64.

THE CONTRACTOR SHALL PROVIDE COMPLETE DESIGN, PLANS, DETAILS, SPECIFICATIONS AND SHOP DRAWINGS FOR THE RETAINING WALLS IN ACCORDANCE WITH THE SPECIAL PROVISIONS. THE RETAINING WALL MANUFACTURER SHALL PROVIDE TECHNICAL ASSISTANCE TO THE CONTRACTOR DURING CONSTRUCTION. THE COST OF FURNISHING THESE ITEMS IS INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH, LRFD/QMP".

THE COST OF FURNISHING AND PLACING THE UNREINFORCED CONCRETE LEVELING PAD UNDER THE MSE PRECAST WALL PANELS IS INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH, LRFD/QMP".

THE COST OF FURNISHING AND PLACING MSE BACKFILL WITHIN THE REINFORCED ZONE IS TO BE INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH, LRFD/QMP".

THE VOLUME OF EARTHWORK REQUIRED TO INSTALL THE UNREINFORCED CONCRETE LEVELING PAD, MSE PRECAST WALL PANELS, MSE BACKFILL AND REINFORCING STRIPS IS INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH, LRFD/QMP".

ALL BAR STEEL REINFORCEMENT IN CAST-IN-PLACE CONCRETE TO BE EPOXY COATED.

THE QUANTITIES OF CONCRETE MASONRY AND BAR STEEL REINFORCEMENT FOR THE SEGMENT A AND SEGMENT F CAST-IN-PLACE ANCHOR SLAB, COPING, AND PARAPET ARE PAID FOR UNDER THE ITEMS "CONCRETE MASONRY RETAINING WALLS" AND "BAR STEEL REINFORCEMENT HS COATED RETAINING WALLS", RESPECTIVELY.

THE QUANTITIES OF CONCRETE MASONRY AND BAR STEEL REINFORCEMENT FOR SEGMENT C AND SEGMENT D CAST-IN-PLACE COPING ARE INCIDENTAL TO THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH, LRFD/QMP". ③

THE PLAN QUANTITY FOR THE ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH, LRFD/QMP" IS BASED ON A WALL HEIGHT MEASURED FROM THE TOP OF THE LEVELING PAD TO THE TOP OF WALL AS SHOWN IN THE PLANS. THE TOP OF LEVELING PAD IS ASSUMED TO BE AT LEAST 2'-0" BELOW FINISHED GRADE. WALL AREAS CONSTRUCTED OUTSIDE THESE LIMITS WILL NOT BE MEASURED FOR PAYMENT. ③

PLANS, ELEVATIONS AND DETAILS SHOWN ON THESE DRAWINGS ARE INTENDED TO INDICATE WALL LOCATIONS, LENGTHS, HEIGHTS AND DETAILS COMMON TO THE WALL SYSTEM SELECTED. THE CONTRACTOR SHALL VERIFY THAT THE WALL SYSTEM SELECTED WILL CONFORM TO THE REQUIRED ALIGNMENTS AND DETAILS.

THE MAXIMUM VALUE OF THE ANGLE OF INTERNAL FRICTION OF THE WALL BACKFILL MATERIAL IN THE REINFORCED ZONE SHALL BE ASSUMED TO BE 30° WITHOUT CERTIFIED TEST VALUES.

THE EXISTING RETAINING WALL IN FRONT OF B-40-882 & B-40-883 NORTH ABUTMENTS IS TO BE REMOVED. THE REMOVAL IS TO BE INCLUDED IN THE BID ITEM "WALL CONCRETE PANEL MECHANICALLY STABILIZED EARTH LRFD/QMP".

Revised Sheet 4626
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

**Division 2 USH 45 NB**

Addendum No. 03
ID 1060-33-81
Revised Sheet 4628
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4630
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

Addendum No. 03
ID 1060-33-81
Revised Sheet 4632
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

Addendum No. 03
ID 1060-33-81
Revised Sheet 4635
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4641
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

3

Addendum No. 03
ID 1060-33-81
Revised Sheet 4646
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4648
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

3

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4662
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4674
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4681
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4683
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4694
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4700
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

3

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4719
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4721
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

3

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Revised Sheet 4729
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4736
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4750
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

1

3

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

Addendum No. 03
ID 1060-33-81
Revised Sheet 4760
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4762
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4764
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Revised Sheet 4769
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4771
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4774
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Revised Sheet 4778
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

**Division 6 RAMP GD**

Addendum No. 03
ID 1060-33-81
Revised Sheet 4780
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

3

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4791
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

3

Addendum No. 03
ID 1060-33-81
Revised Sheet 4803
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

(CONTINUED ON NEXT SHEET)

Addendum No. 03
ID 1060-33-81
Revised Sheet 4804
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4815
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Revised Sheet 4829
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4837
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

Addendum No. 03
ID 1060-33-81
Revised Sheet 4839
September 14, 2015

| Notes: | |
|---|---|
| 1 - Cut | Cut includes Salvaged/Unusable Pavement material |
| 2 - Salvaged/Unusable Pavement Material | This does not show up in cross sections nor is it shown in these sheets. Refer to Summary Table for this roadway's quantity. |
| 3 - Fill | Does not include Unusable Pavement Exc volume |
| 4 - Expanded EBS | Will be backfilled with Borrow |
| 5 - Reduced EBS in Fill | Reduced EBS Excavation that can be used in Fill |
| 6 - Mass Ordinate | If EBS to be backfilled with Cut or Borrow: [(Cut + EBS) - ((Fill) - (Reduced EBS in Fill)) * Fill Factor)] |

The responsibility for notifying potential subcontractors and suppliers of these changes remains with the prime contractor.

Sincerely,

*Mike Coleman*

Proposal Development Specialist
Proposal Management Section

**ADDENDUM NO. 04**

**1060-33-81**

**September 23, 2015**

**Special Provisions**

**4. Prosecution and Progress**

*Add the following paragraphs after paragraph 2 under section titled* **Service Ramp Closure Restrictions**

Do not close the entrance ramp from National Avenue and the entrance ramp from Oklahoma Avenue to northbound IH 894/USH 45 at the same time.

Do not close the entrance ramp from National Avenue and the entrance ramp from Lincoln Avenue to northbound IH 894/USH 45 prior to the closure of any freeway lanes on northbound IH 894/USH 45, as shown in Stage 2 of project 1060-33-81, or as approved by the engineer.

**5. Lane Rental Assessment**

*Replace the table after the first paragraph under section titled* **A.1 Freeway Lane Rental Assessment Table** *with the following:*

| Freeway Lane Rental Assessment Table | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Freeway Closure Type | Peak Hours | | Weekday Midday and Weekend Peak Hours | | Weekday Off-Peak | | Weekend Off-Peak Hours | | Night Time Hours | |
| | Hourly Rental | Closure Hour Credits | Hourly Rental | Closure Hour Credits | Hourly Rental | Closure Hour Credits | Hourly Rental | Closure Hour Credits | Hourly Rental | Closure Hour Credits |
| Shoulder when at least 8 ft, shoulder is reduced to less than 8 ft. | $2,500 | 0 | $1,900 | 0 | $950 | 824 | $400 | 618 | $50 | 7023 |
| Single Lane when 2 or more lanes next to closure are open to traffic | $35,000 | 0 | $30,000 | 0 | $7,200 | 0 | $1,800 | 1235 | $200 | 8670 |

| Freeway Lane Rental Assessment Table | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Freeway Closure Type | Peak Hours | | Weekday Midday and Weekend Peak Hours | | Weekday Off-Peak | | Weekend Off-Peak Hours | | Night Time Hours | |
| | Hourly Rental | Closure Hour Credits | Hourly Rental | Closure Hour Credits | Hourly Rental | Closure Hour Credits | Hourly Rental | Closure Hour Credits | Hourly Rental | Closure Hour Credits |
| Single Lane when only 1 lane next to closure is open to traffic | $63,500 | 0 | $50,000 | 0 | $20,000 | 0 | $9,200 | 0 | $900 | 2706 |
| 2 lanes when 2 lanes next to closure are open to traffic | $40,000 | 0 | $25,000 | 0 | $13,400 | 0 | $6,900 | 0 | $700 | 5117 |
| 2 lanes when 1 lane next to closure is open to traffic | $63,500 | 0 | $35,600 | 0 | $17,800 | 0 | $9,200 | 0 | $900 | 1906 |

**54. Pay Plan Quantity**

*Replace entire article language with the following:*

**A Bid Items Designated as Pay Plan Quantity**

*Replace standard spec109.1.1.2 with the following:*

If the schedule of items designates a bid item with a **P** in the title, the department will not measure that bid item. The department will use the plan quantity, the approximate quantity shown on the schedule of items, for payment unless a contract revision affects a designated bid item.

If the engineer revises the contract under standard spec 104.2, the department will adjust the quantity of designated items that are affected by the revised work. The engineer will adjust the

affected quantity, with a contract modification as defined in standard spec 101.3, regardless of the magnitude of the revised work, which may result in either an increase or a decrease from the quantity shown on the schedule of items. The department will measure revised work as specified in standard spec 109.1.1.1. If the engineer revises the contract to eliminate a designated item, the engineer will not pay for the designated item, except as specified in standard spec 109.5.

The approximate quantity shown on the schedule of items for a designated item is for information only and only an estimate. The engineer makes no guarantee that the quantity, which can be determined by computations based on contract information, will equal the approximate quantity shown on the schedule of items.

If the engineer or contractor believes that the quantity shown in the schedule of items varies significantly from the work required in the contract or a quantity discrepancy significantly changes the character of the work, then follow the procedures as outlined in standard spec 104.2.

Railing Pipe B-40-585, Item 513.2000.0001; R-40-467, Item 513.2000.0002; R-40-469, Item 513.2000.0003; R-40-498, Item 513.2000.0004; R-40-507, Item 513.2000.0005; R-40-509, Item 513.2000.0006; R-40-511, Item 513.2000.0007; R-40-516, Item 513.2000.0008; R-40-518, Item 513.2000.0009; R-40-522, Item 513.2000.0010; R-40-524, Item 513.2000.0011; R-40-525, Item 513.2000.0012; R-40-540, Item 513.2000.0013; R-40-545, Item 513.2000.0014; R-40-5557, Item 513.2000.0015; R-40-558, Item 513.2000.0016; R-40-559, Item 513.2000.0017; R-40-797, Item 513.2000.0018; R-40-655, Item 513.2000.0019.**

*Replace entire article language with the following:*

**A Description**
This special provision describes fabricating, galvanizing, painting and installing steel pipe railing in accordance with Sections 506, 513 and 517 of the Standard Specifications and the plan details, as directed by the Engineer, and as hereinafter provided..

**B Materials**
All materials for steel pipe railing shall be new stock, free from defects impairing strength, durability and appearance. Railing assemblies shall be galvanized and receive a two-coat paint system. Bubbles, blisters and flaking in the coating will be a basis for rejection.

**B1.1 Two-Coat Paint System**
Use one of the qualified paint manufacturers and products given below with the prime coat specifically intended for painting of galvanized surfaces. An equivalent system may be used with the written approval of the Engineer.

| Producer | Coat | Products | Dry Film Minimum Thickness (mils) | Minimum Time Between Coats (hours) |
|---|---|---|---|---|
| Sherwin Williams<br>1051 Permeter Drive,<br>Suite 710<br>Schaumburg, IL 60173<br>847.330.1562 | Tie | Recoatable Epoxy Primer B67-5 Series/B67V5 | 2.0 to 4.0 | 6 |
| | Top | Acrolon 218 HS Polyurethane , B65-650 | 2.0 to 4.0 | NA |
| Carboline<br>350 Hanley Industrial | Tie | Rustbond Penetrating Sealer FC | 1 | 36 |

| | | | | |
|---|---|---|---|---|
| St. Louis, MO 63144<br>314.644.1000 | Tie | Carboguard 60 | 4.0 to 6.0 | 10 |
| | Tie | Carboguard 635 | 4.0 to 6.0 | 1 |
| | Top | Carboline 133 LH(satin) | 4 | NA |
| Wasser Corporation<br>4118 B Place NW<br>Suite B<br>Aubum, WA 98001 | Tie | MC-Ferrox B 100 | 3.0 to 5.0 | 8 |
| | Top | MC-Luster 100 | 2.0 to 4.0 | NA |
| PPG Protective and Marine Coatings<br>P.O. Box 192610<br>Little Rock, AR 72219-2610<br>414-339-5084 | Tie | Amercoat 399 | 3.0 to 5.0 | 3 |
| | Top | Amercoat 450H | 2.0 to 4.0 | NA |

**B1.2 Color**
The finished color for coating system for railing pipe shall match Federal Color 37038 – Black

**C Construction**
*Supplement paragraph 513.3.1(1) with the following:*
Submit shop drawings showing the details of railing construction. Show the railing height post spacing, rail location, weld sizes and locations and all dimensions necessary for the construction of the railing. Show location of shop rail splices, field erection joints and expansion joints. State the name of the paint manufacturer and the product name of the tie coat and top coat used along with the color. State the size and material type used for all components. Also show the size and location of any vent or drainage holes provided.

*Delete paragraph 513.3.1(6) and replace with the following:*
**C1.1 Galvanizing**
After fabrication, blast clean steel railing assemblies per SSPC-SP6 and galvanize according to ASTM A123. Vent holes shall be drilled in members as required to facilitate galvanizing and drainage. Location and size of vent holes are to be shown on the shop drawings. All burrs at component edges, corners and at holes shall be removed and sharp edges chamfered before galvanizing. Condition any thermal cut edges before blast cleaning by shallow grinding or other cleaning to remove any hardened surface layer. Remove all evident steel defects exposed in accordance to AASHTO M 160 prior to blast cleaning. Lumps, projections, globules, or heavy deposits of galvanizing, which will provide surface conditions that when painted, will produce unacceptable aesthetic and/or visual qualities, will not be permitted.

**C1.2 Two-Coat Paint System**
After galvanizing, paint all exterior surfaces of steel railing assemblies and inside of rail elements at field erection and expansion joints as hereinafter provided. All galvanized surfaces to be painted shall be cleaned per SSPC-SP1 to remove chlorides, sulfates, zinc salts, oil, dirt, organic matter and other contaminants. The cleaned surface shall then be brush blast cleaned per SSPC-SP16 to create a slight angular surface profile per manufacturer's recommendation for adhesion of the tie coat. Blasting shall not fracture the galvanized finish or remove any dry film thickness. After cleaning, apply a tie coat from an approved coating system that is specifically intended to be used on a galvanized surface, per manufacturer's recommendations. The tie coat shall etch the galvanized rail and prepare the surface for the top coat. Apply a top coat per manufacturer's recommendations, matching the specified color shown on the plans. Use a preapproved top coat that is resistant to the effects of the sun and is suitable for a marine environment. The tie and top coats should be of contrasting colors, and come from the same manufacturer.

Ensure that the paint manufacturer reviews the process to be used for surface preparation and application of the paint coating system with the paint applier. The review shall include a visit to the facility performing the work if requested by the paint manufacturer. Provide written confirmation, from the paint manufacturer to the engineer, that the review has taken place and that issues raised have been addressed before beginning coating work under the contract.

**C1.3 Delivery, Storage and Handling**
Deliver material to the site in an undamaged condition. Upon receipt at the job site, all materials shall be thoroughly inspected to ensure that no damage occurred during shipping or handling and conditions of materials is in conformance with these specifications. If coating is damaged, Contractor shall repair or replace railing assemblies to the approval of the Engineer at no additional cost to the Owner. Carefully store the material off the ground to ensure proper ventilation and drainage. Exercise care so as not to damage the coated surface during railing installation. No field welding, field cutting or drilling will be permitted without the approval of the Engineer.

**C1.4 Touch-up and Repair**
For minor damage caused by shipping, handling or installation to coated surfaces, touch-up the surface in conformance with the manufacturer's recommendations. If damage is excessive, the railing assembly shall be replaced at no additional cost to the Owner. The Contractor shall provide the Engineer with a copy of the manufacturer's recommended repair procedure and materials before repairing damaged coatings

**D (Vacant)**

**E Payment**
*Delete paragraph 513.5(2) and replace with the following:*

Payment for the Railing Pipe is full compensation for providing, fabricating, surface preparation, galvanizing, cleaning and painting, transporting, and installing the railing, including any touch-up and repairs; for providing and placing metal shims under the bases if required; for providing and placing the anchor bolts.

**91. **318. Install Temporary Pavement Marking Reflective Orange Paint 4-Inch, Item SPV.0090.0320; 8-Inch, Item SPV.0090.0322; 24-Inch, Item SPV.0090.0324; Install Temporary Pavement Marking Orange Arrows, Item SPV.0060.0320**

*Replace section titled* **B.1.2 Reflectorized Paint** *with the following:*

**B.1.2 Reflectorized Paint**
*Replace standard spec 649.2.3 with the following:*

The department will furnish water-borne orange paint intended for marking traffic lanes on both concrete and asphalt highways.

Contractor furnished materials include, but are not limited to, the following:

Glass Beads - Furnish glass beads to reflectorize the paint conforming to standard spec 646.2.3.

**333. Fence Decorative Bridge, Item SPV.0090.4400; Fence Decorative Wall, Item SPV.0090.4410**

*Replace paragraph 2 under section titled* **B.1 General** *with the following:*

Blast clean steel, after fabrication, per SSPC-SP 6, and galvanize according to ASTM A 123. Supply all bolts, nuts and washers as factory galvanized according to ASTM A 153. Repair zinc coating damaged during fabrication as specified in standard spec 513.3.3(3). Grind the welded joints shown in the plans to a smooth finish.

*Replace section titled* **B.2 Painting** *with the following:*

**B.2 Two Coat System**
After galvanizing, coat all exterior surfaces of steel fence at field erection and expansion joints with a two coat system as hereinafter provided.

Clean all galvanized surfaces to be painted per SSPC-SP1 to remove chlorides, sulfates, zinc salts, oil, dirt, organic matter and other contaminants. Then brush blast clean the cleaned galvanized surface per SSPC-SP16 to create a slight angular surface profile (1.0 - 1.5 mils suggested) for paint adhesion. Do not fracture the galvanized finish or remove any dry film thickness during the brush blast cleaning process.

Prior to application of the tie-coat, remove visible deposits of oil, grease and other contaminates from the surface per SSPC-SP1, and clean the brush blasted surface of dust, dirt and loose residue conforming to standard spec 517.

After cleaning provide a tie coat from an approved coating system that is specifically intended to be used on a galvanized surface. The tie coat shall etch the galvanized surface and prepare the surface for the top coat. Apply a top coat matching the specified color. Utilize a contrasting color for the tie and top coats. Use a pre-approved top coat that is resistant to the effects of the sun, and is suitable for use in a marine environment. Paint the various decorative fence components with the tie and top coats before final assembly of the fence panels. Do not damage the painted surface during panel assembly or fence installation.

Use one of the qualified paint sources and products given below. An equivalent system may be used with the written approval of the engineer.

| Producer | Coat | Products | Dry Film Minimum Thickness (mils) | Minimum Time Between Coats (hours) |

## 409. Maintaining and Removing Crash Cushion, Item SPV.0060.0430

### A Description
This special provision describes maintaining and removing existing crash cushions in accordance to the pertinent provisions of section 204 of the standard specifications and as hereinafter provided.

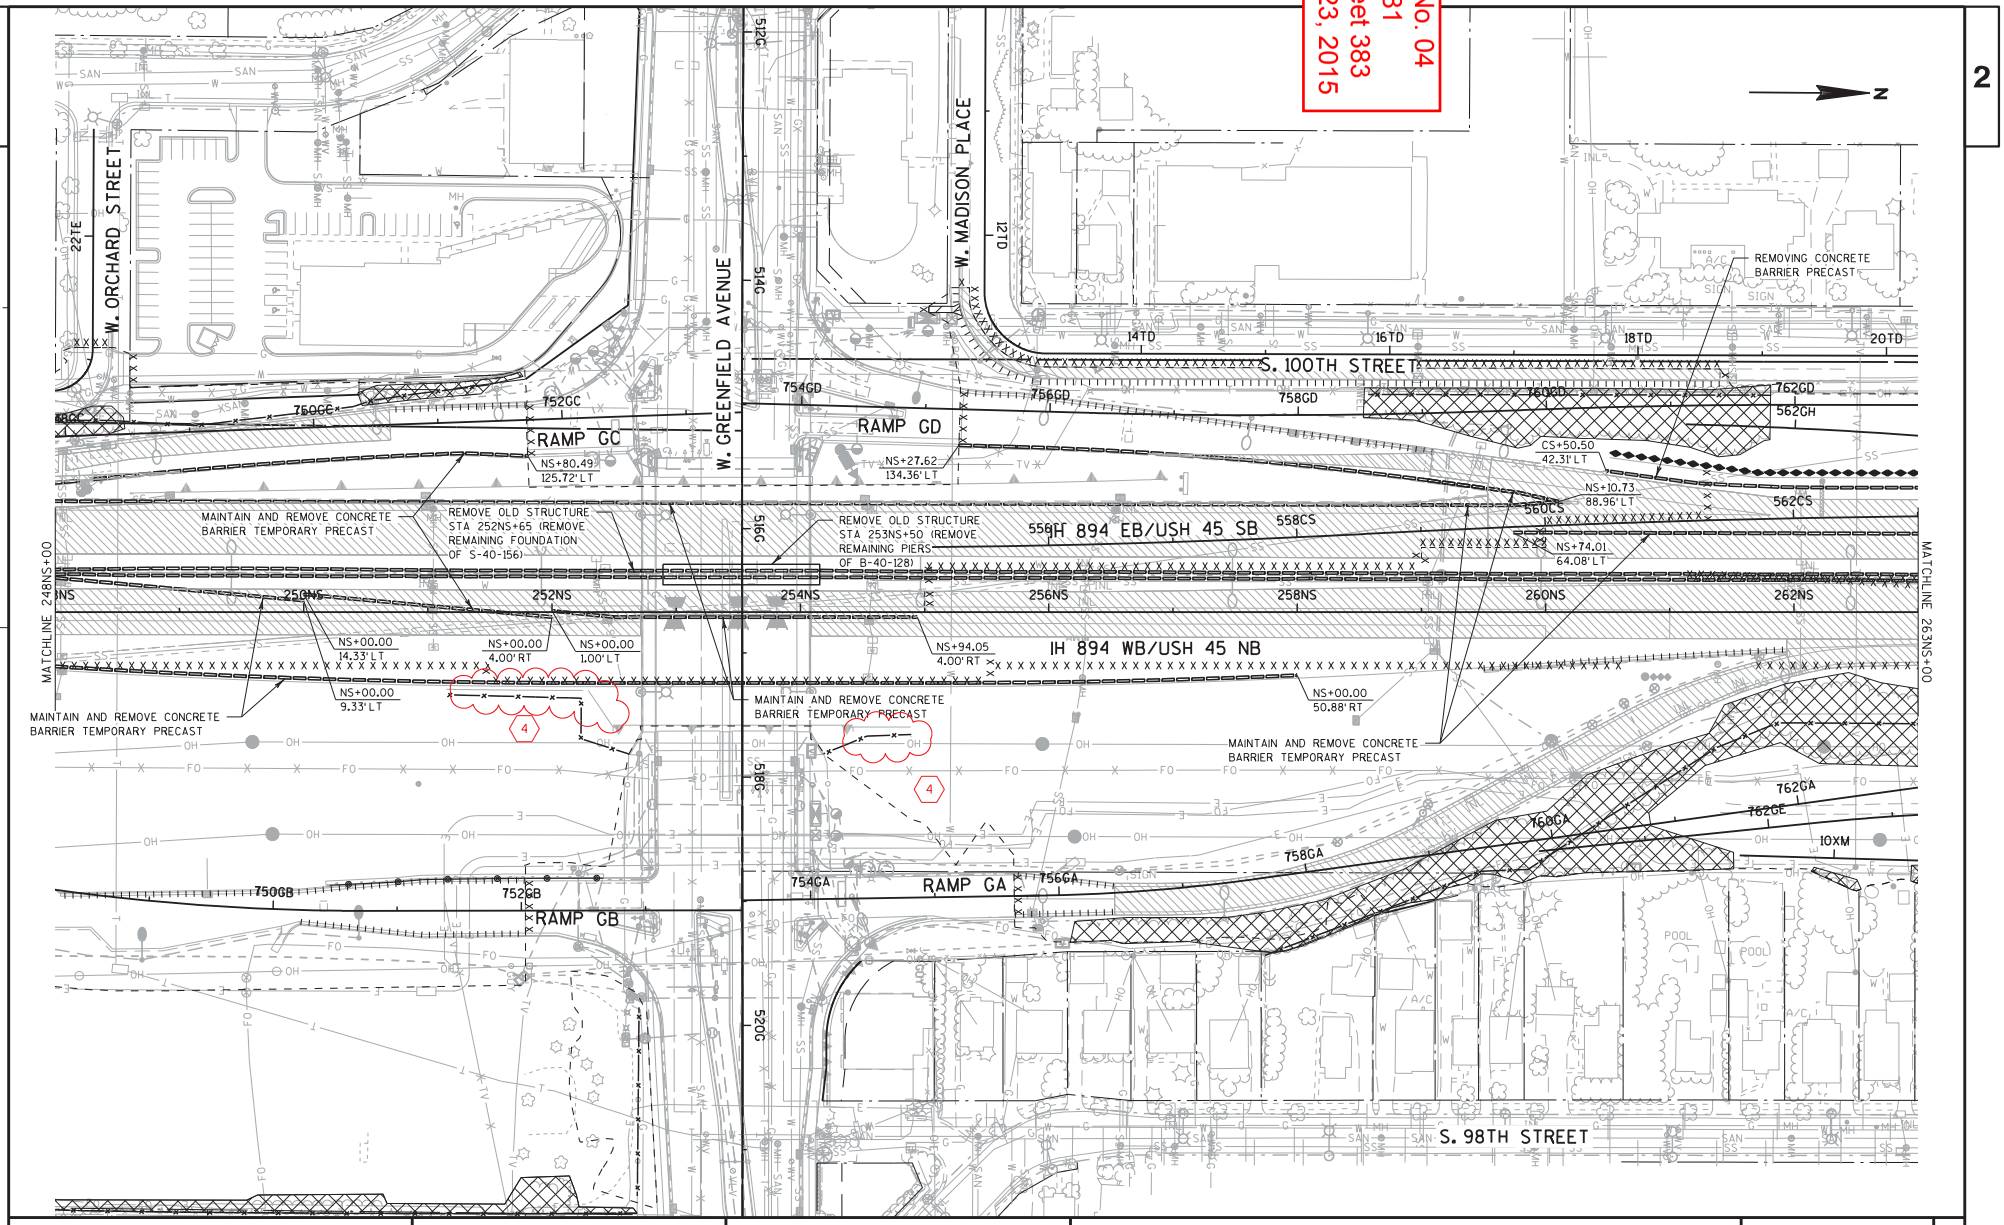
### B (Vacant)

### C Construction
Maintain crash cushions left in place from a previous contract until removal. The existing crash cushions shall be removed as shown on the plans. The contractor shall include the cost of any and all methods that may be needed for the maintenance and for the expected removal of the materials under this bid item.

### D Measurement
The department will measure Maintaining and Removing Crash Cushion by the unit acceptably removed.

### E Payment
The department will pay for the measured quantity at the contract unit price under the following bid item:

| ITEM NUMBER | DESCRIPTION | UNIT |
|---|---|---|
| SPV.0060.0430 | Maintaining and Removing Crash Cushion | Each |



Payment is full compensation for maintaining and removing existing crash cushions; and for furnishing all labor, tools, equipment, materials, and incidentals necessary to complete the contract work.

**Schedule of Items**
Attached, dated September 23, 2015, are the revised Schedule of Items Pages 6, 12, 75, 95, 100, 101, 119, and 128 – 142.

**Plan Sheets**
The following 8½ x 11-inch sheets are attached and made part of the plans for this proposal:
Revised: 383, 1627-1630, 1636, 1837, 1904, and 1905
Added: 1904A
